Very striking variations have been noted in the color and marking of these huge rays; the spots are sometimes ocellate, having dark centres with white rings about them, and it was found that such eyed-spots were always due to partial or complete coalescence of two originally distinct markings, a process which often gives rise to many curious and bizarre effects. The living colors, as in many other fish and invertebrates, are evanescent or subject to profound change after the animals are removed from the water; thus, a freshly caught specimen was chestnut brown, with cream-colored spots, but when placed in a boat and only partly covered with water, the spots immediately whitened, while the parts exposed to the air turned black, and their spots blue. Transverse lines or bands sometimes appear on the upper parts of the body after death, but these proved to be due to underlying canals or blood-vessels, the coloring matters being brought to the surface in consequence of changes of tissue, especially when treated with preservatives.

Marcgrave, who described this fish in his "Natural History of Brazil" in 1648, declared that its flesh was of excellent flavor and sufficient to feed forty men; but while many Europeans have long since added the shark and the skate to their dietary, together with most things that crawl in the sea, Americans, who seldom venture beyond the list that custom prescribes, have as yet barely ventured to taste the mussel and the snail.

The editors of the volume of "Selected Papers, Surgical and Scientific, from the Writings of Roswell Park," late professor of surgery in the University of Buffalo and surgeon-in-chief to the Buffalo General Hospital (Buffalo: Courier Co.; $3), have chosen from the numerous writings of Dr. Park such addresses and papers as will give a satisfactory idea of the wide range of his surgical endeavor and experience. Most of these are of interest only to the surgeon or the physician, but the student of the history of medicine or the layman who is interested in the progress of medicine in its social relations would find much to arrest the attention in The Present Status of Antiseptic Surgery (1882); Surgery of the Brain, Based upon the Principles of Cerebral Localization (1888); The Parasitic Theory of the Ætiology of Carcinoma (1893); an Epitome of the History of Carcinoma (1903); The Next Twenty-five Years in Surgery (1909), and Conclusions Drawn from a Quarter-Century's Work in Brain Surgery (1913). Of especial interest is the account, under the caption "Reminiscences of McKinley Week," of Dr. Park's experiences as a member of the medical staff responsible for the care of President McKinley at the time of his assassination in 1901 at the Buffalo Exposition. A memoir of Dr. Park by Dr. Charles G. Stockton and a bibliography of his principal writings complete the volume.

Drama

The Art of Acting

By J. RANKEN TOWSE.

Of these four booklets,* constituting the second series of Publications of the Dramatic Museum of Columbia University, all reprints, but old enough to be fresh, three are distinctly valuable and opportune for the authoritative pronouncements which they contain concerning that great art of acting which is so distinct from the mere miming offered as a substitute in the purely commercial theatre of to-day. Thus we have critical reviews by Prof. Fleeming Jenkin on the acting of Mrs. Siddons—based on the contemporary notes of Prof. G. J. Bell—and of Henry James on Benoit Constant Coquelin, together with Coquelin's own essay on his art, and the notable paper by Talma on the same subject. All of them may be studied with pleasure and profit. Naturally, they are not in complete accord on all the points which they discuss, or even on the most important point of all—that involving the truth or falsity of Diderot's famous paradox—but all agree that brains, conscientious study, and long practice are necessary prerequisites to the making of a great actor. The object of this article is to treat them more or less collectively, disregarding familiar, obvious, or insignificant matter, but dwelling especially upon the evidence affecting the vital question of interpretation. Can players, nearly all our modern stars, for example, who are content to express every character in the exact terms of their individual habits, rightly be called great actors? To this query the present writer would oppose an uncompromising negative.

This, of course, does not in the least mean that the personality of a great actor, modified or intensified, may not assert itself with splendid and appropriate effect in the presentation of a totally imaginative character. But it does contradict the quoted opinion of Henry Irving that the strong personality of the actor, plus technical skill, meant great acting. That is true only in particular cases—his own Mathias and Louis XI, for instance, in which there was no conflict between personality and conception. Irving was a great actor, but not in parts with which his aggressive personality was inharmonious. Prof. Fleeming Jenkin, a weighty critic, is inclined apparently to adopt his view. In his essay on Mrs. Siddons he points out that it is impossible to construct from the text of Shakespeare, or any other dram-

atist, an indisputable realization of the creator's ideal, which shall be the standard by which all imitations of it must or can be judged. That is true enough. It may even be admitted that a certain indefiniteness may exist even in the mind of the creator concerning many minor features—not the dominant outlines, however—of his imaginary personage. But in any attempted materialization he would demand that all subordinate, illuminative details should be in essential conformity with the fundamental intellectual, emotional, and physical characteristics of his conception. It does not follow that every adequate embodiment of it must be identical or closely similar. The Hamlets of Edwin Booth, Charles Fechter, and Forbes-Robertson differed greatly in aspect, design, and action, but each found its justification in the letter and spirit of the text, not in the reflected personality of the actor. Irving's impersonation, often brilliant in intellectual quality, was fatally disfigured by eccentric and inconsistent mannerisms, natural or acquired, but unrepressed. Fortunately, they were only a part of his remarkable personality. In the case of many less gifted actors, mannerisms are their only capital. It is a mere truism to say that the artistic range of an actor is defined by his mental and physical capacities, but genius, that divinely intuitive comprehension, can overcome many physical impediments, as Edmund Kean proved in Othello. He had the sympathetic vision that enabled him to see the soul of the Moor in the poet's text, and the fiery artistic zeal, in his supremest moments —the flashes of lightning—to make it his own. This is the histrionic power that in heroic parts can dispense with inches. The inspiration, which is but the highest form of intelligence, is virtually all. To translate the great thoughts of an abnormal mind, such as Shakespeare's, some kindred supplementary quality must exist in the interpreter. The problem for the actor is not "What should I feel or do in such circumstances?" but "What would Shakespeare's Othello do, and how would he do it?" Herein lies the difference between the artistry and the craftsmanship of which Professor Jenkin speaks. It is the difference between the deadly, mechanical, traditional Hamlet of that wonderful actor, Samuel Phelps, and the fascinating Dane of Edwin Booth. The one was Mr. Phelps, the other was an illustrative suggestion of the real prince.

Was Sarah Siddons a great interpretative artist, or was she only an extraordinarily clever player, mistress of every trick in her branch of the theatrical trade, and endowed with special graces of nature, a noble form and countenance, a glorious voice, and matchless natural dignity? To hesitate in answering seems almost blasphemous. She was the object of almost universal critical acclaim. But the insistence upon her majesty of deportment, her poses, her "eloquent pauses," her nicely measured speech, her floods of tears, her abrupt transitions, provokes doubt. She flourished in a theatrical period marked by an artificiality to which Macready, himself a precisian, gave a death-blow. It is difficult, in these later days, to share Professor Jenkin's faith in Professor Bell's notes, jotted down from actual observation, as proof positive of the accuracy of his own estimate of the actress's supreme genius. They are descriptive rather than analytical, and exceedingly fragmentary. They show, so far as they go, how and when Siddons made some of her great points. They demonstrate the occasional effectiveness, not the mentality or consistency, of her performance. He makes it plain that she relied much upon strongly contrasted moods, abrupt transitions, and splendor of pose and gesture—she was, doubtless, a gifted and impressive creature with superb executive ability—but was not much concerned, apparently, about the harmony of her work as an artistic whole. He intimates, perhaps unconsciously, that she endowed Lady Macbeth with a double personality, one superior to all feminine weaknesses, the other subject to nearly all of them. It might be argued, very plausibly, from his comments, that she paid more heed to theatrical effect than to the truth of nature. He even suggests that she deliberately acted the character in a manner contrary to her own conception of it, for purely theatrical purposes, without perceiving the enormity of such an artistic offence. In other words, she was influenced by the desire to make the most of her own personality. She is known to have expressed the notion that Lady Macbeth was more temptress than tyrant. On the other hand, it is certain that in acting her she dominated the whole play, relegating Macbeth —who, after all, was a brave warrior and chief executant—to an entirely secondary position, thus disturbing the whole balance of the tragedy. This was not the Shakespearean intent, and it was not the highest artistry. There can be no doubt of Mrs. Siddons's wonderful acting power, but that she was a great interpretative genius is less certain.

Professor Jenkin is on firm ground when he maintains that the prime object of the playwright must be a successful appeal to the emotions, but on dangerous ground when he attempts to prescribe a formula for playmaking. There are certain indispensable rules, or principles, which cannot be safely ignored, but most of them are elastic. Legouvé is no longer an authority. The five-act play is almost a thing of the past. So long as a plot is a good one, logical as to causes and consequences, it does not matter whether it was constructed backwards or forwards. But the mechanism must be concealed. No two dramatists work in precisely the same way. The one thing necessary is the proper interaction of circumstance and character. Nobility of subject and treatment provides, of course, the one true test of excellence. Success in representation is not, necessarily, any proof of real value, or failure of unworthiness. Incompetent acting has killed some of the finest dramas ever written. It has often proved fatal even to Shakespeare.

It is worth noting that Talma, perhaps the greatest histrionic genius in the history of the French stage, begins his paper with the assertion that his art is for instruction as well as for pleasure. He might have added that when the theatre abandons all profession of instruction it abandons also its claim to be considered among the arts. The power of the stage to diffuse profitable instruction of all kinds under the disguise of entertainment is its greatest privilege, distinction, and opportunity. Talma is under no delusion concerning the object, the responsibility, or the power of the actor. He is, he says, a translator, and more than a translator, too, for there are cases in which he can add to and perfect the ideal presented for his interpretation. If a man have not histrionic genius, he says, no amount of teaching can give it him. Nevertheless, training and long practice, about twenty years of them, are always essential, and the greatest genius may profit by artistic instruction. This he proceeds to illustrate by the experience of Lekain. Nature is the true guide, he avers, in the most exalted moods of tragedy. "The great movements of the soul," he adds, "elevate a man to an ideal nature in whatever rank he may be," which is a somewhat dark saying. Extreme sensibility and profound intelligence, he declares to be the most essential attributes of the great actor. The first enables him to associate himself with all the shades of character, every movement of the soul, of the historical or fictitious person. Sensibility is even more important than intelligence, especially in tragedy. It is the province of intelligence to compare, select, and coördinate the impulses of inspiration. Only those players whose souls are susceptible to the extremes of passion can hope to be great actors. Here there is no question of the actor foisting upon his audience his own common character for that of a noble ideal.

Fleeming Jenkin, in an acute survey, picks out the salient points of Talma's essay with prompt appreciation, but is somewhat hypercritical in charging him with confusing feeling with expression. Actually, he meant that the one implied or suggested the means to the other. Deep feeling, in different persons, may express itself in many different ways. Intelligence reflecting upon these will decide upon the best and most appropriate. It is possible, of course, that the first natural, intuitive action or utterance of the player student might, upon consideration, be adopted as the best possible in the prescribed circumstances, but that would prove the exception, not the rule. It is clear that Talma meant to warn actors against the danger of imputing themselves, as Tennyson expressed it. Had Talma lived to see Salvini, who was virtually free from all mannerisms of any kind whatever, and exhibited unequalled versatility as Othello, Conrad, and Sullivan, he would have recognized in him a brilliant exponent of his theory and system.

Henry James's essay upon the art of the actor is especially valuable at this time for the stress which it lays upon the important part that cultivated speech plays in the interpretation of literary and poetic drama. His estimate of Coquelin's versatility—positive as it indisputably was in a wide range of comedy—and of his supremacy in romantic and highly emotional parts, is somewhat extravagant, but there is no exaggeration in the critical praise which he lavishes upon the extraordinary finish and beauty of his diction. His voice was an extraordinary instrument, not particularly musical, but wonderfully strong, penetrating, and vibrant, and he played upon it with exquisite skill. The crispness, clarity, and volubility of his utterance, with its infallible adherence to the nicest emphasis, contributed immensely to his innumerable triumphs in every variety of comic character, from his inimitable lackeys of the old classic comedies to the "diseurs" of the later social drama. To the longest speeches, even to the traditional chant of interminable Alexandrines, he could impart infinite variety and interest by his mastery of all the arts of vocalization. In dwelling on this delightful proficiency Mr. James, in passages of rare literary charm and critical acumen, insists upon the theatrical necessity of gratifying the ears as well as the eyes of a cultivated audience. He is doubtless right in saying that the slovenly speech of the modern actor has helped to drive the literary drama from the stage.

M. Coquelin, an unimpeachable authority on the subject of theatrical art, plumply asserts that the actor must provide the proper body for the soul created by the author. It must be the complete and perfect expression of it "with all its peculiar manner." This, alas, is counsel of perfection. He adds that there is no masterpiece to which the great actor may not contribute something. To inferior parts he gives nearly everything. In Diderot's paradox M. Coquelin proclaims himself a firm believer. An actor, he says, must learn to express emotions which he has never felt and never can feel. This is the gist of the whole matter, and it is a sufficient answer to the assertion of George Arliss, in an introduction to a paper by William Gillette, that the actor who feels and lives his part gives free play to his body and features, and so presents the true flesh-and-blood man. Such a performer simply plays himself. He virtually contradicts his own dogma when he says that many players, who have won popularity only in some peculiar type of character (their own), are not actors at all. This is most potently true. A really strong individuality—often the accompaniment of genius, as in Irving—cannot always be suppressed utterly, nor is such total suppression always desirable—but it can be moulded and transformed. Mr. Arliss's contribution is not very valuable, being professional, not philosophical. As for Mr. Gillette's, that is almost negligible, being flippant, shallow, and disingenuous, when it is not platitudinous. He jeers at criticism and the "palmy days," upholds the commercial managers, and demolishes propositions which no sensible person ever made. Of course, managers, unless richly endowed, must make money in order to live. The real question is whether more money cannot be made by good plays with good actors than with poor plays and poor actors. One wonders why matter so unreflective should have been deemed worthy of reproduction in such company, by a great educational association.

As for his dictum—discussed by Prof. Brander Matthews in one of the useful supplementary notes which he has provided—that a play cannot be fully comprehended by the reader, unless he has also seen it in action, that, Goethe and Molière to the contrary notwithstanding, is completely fallacious as a general proposition. It may be true of pieces, mostly comic, of which the text is insignificant, the types special, and action all important, but it certainly does not apply to masterworks, of which the conception, the psychology, and the text are inspired by imaginative genius, and which suggest to the reader—having brains—ideals not to be materialized by human ability.

"ROMEO AND JULIET."

The production of "Romeo and Juliet" made by the David Chanler Dramatic Company in the Forty-fourth Street Theatre proved an unfortunate illustration of the way in which such an enterprise ought not to be undertaken. All the preliminary care and forethought apparently had been bestowed upon the framework and accompaniments of the play, instead of on the proper interpretation of the play itself. The scenery and costumes were everything that the most fastidious spectator could desire. They justified the reputation of Jacques Coini. Seldom, if ever, has the tragedy had a richer or more tasteful setting. The incidental music—though some of it was used in wrong places—was good and admirably performed by a string orchestra. But the performance, except at two or three isolated spots—the ballroom and mob scenes, in which the supernumeraries were handled effectively and picturesquely—was inadequate, dull, and utterly uninspired. The only actor in the cast who filled his part and spoke his lines with comprehension of their meaning, dignity, and rhythm, was the veteran Fuller Mellish, the Friar Laurence. The Romeo of George Relph was handsome, virile, and fairly intelligent, but devoid of eloquence, fascination, or any glow of romance. The Mercutio of Frederick Lewis was facile and rapid, but without distinction or brilliancy. The Nurse and Peter were traditionally and dismally mechanical. Miss Khyva St. Albans, who attempted Juliet, was a novice, endowed with beauty, stature, gracefulness, and courage, who evidently had been coached carefully, if not always judiciously, in the "business" of her part. She rehearsed it with precision and occasionally with vigor, but of the essence of the character she expressed nothing or very, very little. The representation as a whole—it would be dishonest to say less—was exasperating, because of the wrong done to Shakespeare.

J. R. T.

"THE CHIEF."

Horace Annesley Vachell has adopted the rôle of playwright *con amore*, and, we may add, with a success that is denied to most novelists who turn to the drama for added laurels or, more probably, added dollars. Seldom in the unfamiliar medium of the stage does a novelist exhibit the technical mastery displayed by Mr. Vachell in the two plays by him which have been seen in New York this season—"Quinneys'," one of the most pleasing productions of the year, and now "The Chief," a most cleverly written light comedy, produced last week at the Empire, the principal rôle in which fits Mr. Drew so well that we can hardly believe that the play was not written with this experienced comedian in mind.

The Earl of Yester, an amiable and immensely wealthy nobleman of middle age, an ex-Colonial Governor, was inveigled by a trick of the formidable Mrs. Bargus into a marriage with her daughter which was not a success. As the play opens he has been a widower for some years, but his mother-in-law still rules in his household, which is nominally presided over by her younger daughter, Emily. It is her desire—the Deceased Wife's Sister bill having finally passed the House of Lords—to effect a match between Emily and the Earl. Breaking into this situation comes Cynthia Vansittart, Yester's former love, from whom he was separated by the trick of his mother-in-law. Cynthia is now a fascinating widow, but poor and looking for a position as secretary. Yester, who is about to lose his invaluable secretary, Derek Waring, offers her the position, and in addition buys from her some pearls which, unknown to her, are imitation. His old love is revived, and the end of the play would have come prematurely but for the secondary plot that centres upon Yester's ward, Daphne Kenyon. Cynthia, conceiving the idea that Yester is in love with his ward and she with him, repulses his attentions. In point of fact, Daphne is in love with Waring, the invaluable secretary, and Yester is anxious for her to marry Lord Arthur Wrexham, the worthless son of a duke, while poor nondescript Emily is genuinely in love with Yester, and Mrs. Bargus is busy pulling strings in all directions to bring about the match. To attempt to follow the complications that ensue in a brief summary would be an injustice to the play. All comes right in the end. Yester marries his old love, triumphantly vindicated of the various accusations made against her by Mrs. Bargus, and Daphne marries the secretary.

Whether "The Chief" will enjoy a long run in New York may be doubted. It is the type of drawing-room comedy that goes so well in London, but, lacking "the punch," is not so much appreciated over here. Also, of course, in motive, atmosphere, and characters, it is essentially English. There is no faintest pretence to originality in plot; the characters all belong to well-recognized stage types; the end of the play is plainly in sight almost from the beginning; except in the third act it is wholly lacking in any dramatic tension. But the slender theme is worked out with all the nicety and exactness of an ingenious puzzle, situation fitting into situation, character complementing character; and throughout the dialogue is clever and vivacious. American audiences usually demand stronger meat than Mr. Vachell provides for

their dramatic fare; but it is all vastly entertaining, and for the student of the stage the delicate flavor of the menu more than atones for its lack of solid sustenance.

Of Mr. Drew it is sufficient to say that he is seen at his best. Miss Laura Hope Crews gives a clever and well-conceived performance in the by no means easy part of Cynthia Vansittart. As played by Miss Consuelo Bailey, Daphne Kenyon is as dainty and vivacious an ingénue part as has been seen this season, the scene in which she indulges in mock hysterics on a sofa being a capital bit of farce-comedy. Miss Katherine Stewart, admirably dressed, is a properly formidable Mrs. Bargus; Miss Thais Lawton is perhaps excessively dismal in the dismal rôle of Emily; Echlin Gayer gives a good character study as Lord Arthur Wrexham, and George Graham is capable as a secretary and prepossessing as a lover. S. W.

Music

A MUSICAL "GENIUS AMONG GENIUSES."

"To my mind, Frederick Delius is certainly the greatest and most significant of all living composers known to me. Not merely because he is one of the most original and independent creators of our era, a wizard in orchestration, an iconoclastic harmonist second to none, but because of the irresistible emotional power and sincerity of all he writes; because he is one of the great cosmic men of all times, such as Bach, Wagner, Goethe, Milton, Walt Whitman. . . . It is the human soulfulness back of all his resplendent artistic achievements that marks him out as a genius among geniuses; that makes his work so strangely touching and endearing, and accounts for the ever increasing vogue of such complex creations as 'Dance Rhapsody,' 'Sea Drift,' 'Brigg Fair,' 'Pax,' 'Appalachia,' 'Mass of Life,' 'The Dance of Life,' 'On Hearing the First Cuckoo in Spring,' the piano concerto, etc."

After being incomprehensibly neglected in our concert halls, this "genius among geniuses," as Percy Grainger (who wrote the words just cited) calls him, has suddenly come to the fore. Last Friday, Mr. Grainger himself played the piano concerto with the New York Philharmonic, and it is no doubt owing to his enthusiastic championship that the New York Symphony Society last Sunday performed two of Delius's orchestral pieces, two "Mood Pictures," entitled "Summernight on the River" and "On Hearing the First Cuckoo in Spring," and that the Philadelphia Orchestra promises to play, next month, his "Dance Rhapsody," which Grainger considers his most perfect long orchestral piece, which is "as full of melody (and such melody!) as Italian opera, kaleidoscopic in its ever-changing wanton moods and vivid contrasts of orchestral color."

The piano concerto demands special interest from the fact that, like Dvorák's "New World Symphony," it was composed in America, and, likewise, shows the influence of negro music. As a young man, Delius spent a few years among the orange orchards of Florida, where he enjoyed the untutored singing of the negro workers, and in this the slow movement of the concerto had its birth. But if local color enhances the charm of this part, the substance of the work is Delius's own. The first movement, in particular, is replete with glowing details, splendid outbursts alternating with tender episodes that betray true genius. Mr. Grainger and the Philharmonic gave a superb performance of the concerto, and the audience indicated its pleasure in the most unmistakable manner. The conductor of the Philharmonic, Josef Stransky, is at his best in modern works like this, or the "Don Juan" of Richard Strauss, which preceded it.

Of the two pieces of Delius played by the New York Symphony Orchestra, under Walter Damrosch, the first, "Summernight on the River," is a night-impression of the River Loing, near the composer's home at Grez-sur-Loing, near Paris. Some croaky notes on the bassoon were inspired by a chorus of frogs that abound in a marsh near by. It is an impressionistic piece, remarkable as a mood picture, indeed, but of no great value as music. Much more interesting is the second, "On Hearing the First Cuckoo in Spring." The cuckoo, represented by the clarinet, is Norwegian, and so is the charming folk tune on which this delightful piece is based. It is harmonized and colored in the style of Grieg, who was for years an intimate friend of Delius, and who could hardly have improved on it himself.

During the first six weeks of the present season the music lovers of New York have had opportunity to hear thirty singers, twenty pianists, and fourteen violinists, not counting those who appeared in concerts arranged by others. As Mr. Krehbiel has taken the pains to compute, these six weeks brought forward nearly half as many singers, pianists, and violinists as were heard here in six months of the season of 1914-15, which was an exceptionally busy one. Verily, New York has become Berlin, musically speaking. If the war lasts another year, all European musicians who are allowed to leave their countries (some prominent ones are detained) will have sought an asylum in America. Most of the American students and artists who were abroad have also come back, and they all give their recitals, though knowing in advance that the result will be, as a journalist has put it, "a deficit of $400 and a broken heart." It is an open secret that most of the recitals in New York are given solely for the purpose of getting critical opinions which may be useful in preparing circulars for distribution throughout the country.

The operatic week did not bring anything new. Mascagni's "Iris" had to be postponed because Miss Bori was ill; and for the same reason Mme. Edvina had to be brought from Chicago to sing Tosca. This Canadian soprano made a favorable impression both as a singer and—what is of equal importance in this opera of Puccini—an actress. She even has the gift of facial expression, rare in opera singers. In a revival of Rossini's "Barber of Seville" three new singers made their début, all of them Italians: Giacomo Damacco, Giuseppe de Luca, and Pompilio Malatesta, with whose aid Mme. Hempel gave one of the best performances of that opera heard here in some years. Rossini's masterpiece followed an afternoon performance of Wagner's "Parsifal," in which the new conductor, Arthur Bodanzky, once more proved himself a Wagnerian conductor of the first rank. Henry T. Finck.

FOLKSONGS AND DANCES.

When the Oliver Ditson Company announced, a number of years ago, that it would publish, under the general title of The Musicians' Library, a series of volumes of songs and pieces for pianoforte by the great masters of all countries, the promise was at the same time made that each of these volumes would be edited by an authority on its subject. This promise has been carefully kept in mind, the result being that the sixty-seven volumes of this series now obtainable make a collection of incomparable value and trustworthiness. Not only are several thousand of the world's best songs and instrumental pieces thus brought under three-score and seven covers, but the volumes are beautifully printed on excellent paper, thus making ideal gift books for musical folk.

For the volume entitled "Sixty Folksongs of France" the publishers have been particularly judicious in procuring as its editor Julien Tiersot. A pupil of Savard, Massenet, and César Franck, and successor of Weckerlin as librarian of the Paris Conservatoire, M. Tiersot won, in 1885, the Prix Bordin for his "Histoire de la chanson populaire en France"; and since that time he has lectured and published much on the same subject, in which no other scholar has delved so deeply. In the introduction to the collection of French folksongs which he has made for the Oliver Ditson Company, he calls attention to the amazing fact that for a long time the belief was current that France possessed no real folksongs other than some satirical, the ancient *vaudevilles*, and the ariettes of a bygone day. The same belief, oddly enough, prevailed, until quite recently, regarding folksongs in England. When the first edition of Grove's monumental "Dictionary of Music and Musicians" was published, it was assumed that while there were plenty of Scotch and Irish folksongs, England itself had none that were racy of its soil. But since the establishment of the Folksong Society in 1898 large numbers of true English folk tunes have been gathered and printed, and Percy Grainger is now doing for them what his friend Grieg did for the folk music of Norway. To

cite Grieg's own words to Grainger with reference to his settings of folksongs: "In them you have thrown a clear light upon how the English folksong (to my mind so different from the Scotch and Irish) is worthy of the privilege of being lifted up into the 'niveau' of art; thereby to create an independent English music."

In France there has been no less active research, in which M. Tiersot has taken the lead. A footnote in the volume before us gives a partial list of his publications on this subject. In preparing these he became convinced that France need yield to no other nation in respect to the abundance, variety, and vitality of her folksongs. So abundant, indeed, is the supply that he did not feel it necessary to make more than a few excerpts from his earlier publications, preferring to have this an entirely fresh collection. All parts of France are represented, not excepting those provinces in which the speech differs so widely from French that it seems almost another tongue. Besides the general introduction, in which the thesis is maintained that the songs of the people constitute an art that is complete in itself and "display all the variety which is found in the ripest fruits of scholarship," the editor has also contributed a brief note to each of the sixty songs included in his collection, giving all information that could be obtained regarding it. These notes, as well as the introduction, are printed in the original French, in parallel columns with an English version.

M. Tiersot is also the editor and compiler of "Forty-four French Folksongs and Variants from Canada, Normandy, and Brittany" (G. Schirmer). He made two visits to the Canadians, who, he found, "have more faithfully preserved the treasures of their folklore than have their brothers who remained at home." Moreover, popular song in Canada, "far from being despised by the educated classes, has remained in favor with them even more than among the lower classes, to whom it has long been relegated in France." In all cases, in both these volumes, M. Tiersot has added harmonies which preserve the spirit of the tunes.

Concerned with the other end of our Continent is a volume entitled "Folksongs from Mexico and South America" (New York: H. W. Gray Company), compiled, edited, and arranged by Eleanor Haguc and Edward Kilenyi. There are twelve of them, all love songs, some of Spanish, others of Brazilian, ancestry, and usually there is local color in the tunes as well as in the words. Much more comprehensive is another volume, compiled by Gustav Hinrichs, entitled "National Hymns, Songs, and Patriotic Airs" (New York: G. Schirmer). "All countries" in this case means 104 of them, in all parts of the world. The same publishers have recently issued two volumes of folk dances of Denmark and Finland, both of them edited and fully described, with text and music, by Elizabeth Burchenal. In these days of varied and new dances, culminating in the elaborate Diaghileff ballet, which is about to descend upon us, they will doubtless be widely welcomed.

Art

LITHOGRAPHY.

Lithography and Lithographers: Some Chapters in the History of the Art. By Elizabeth Robins Pennell. Together with Descriptions and Technical Explanations of Modern Artistic Methods, by Joseph Pennell. New York: The Macmillan Co. $4.50.

Those who appreciate the rich possibilities of lithography as a medium for the artist, as a means of direct expression such as is found in etching, may well feel gratification at the fact that this re-issue and amplification of the book on the same subject published by the Pennells in 1898 has been judged expedient.

"The lithograph has the inestimable advantage of being absolutely autographic," and its appeal to the artist is based on varied resources. And yet that appeal has been long unheeded. Difficulties in printing may possibly have had something to do with this in America. To some extent, however, they exist elsewhere, and they are quite evident in the technical notes on printing in the present book. These notes, together with the information regarding transfer papers, should be of decided use to the artist intending to woo this willing and thankful medium. The passing reference on page 197 to "illustrations with a lithographic basis" calls to mind those American cartoonists of the type of Boardman Robinson who, like their confrères of the Paris *Figaro*, use soft crayon somewhat in the spirit of Daumier.

Historically, the present work is the best, in fact the only, summary in English, but it is not the most complete work on the subject. The story of the art to the end of the last century was told and illustrated very fully in the folio volume on lithography issued by the *Gesellschaft für vervielfältigende Kunst* of Vienna. "Some Masters of Lithography," by Atherton Curtis, easily holds first place, but does not enter into comparison here because it deals with a limited number of artists. The present book strikes one occasionally as combining a meticulous care in the ascertaining of details (as of exact dates) and an easy grace in failing to attend properly to other essentials. When a book is as useful as this one, it may seem ungracious to refer to errors which appear of minor importance. Yet a little care would have avoided the mistakes and made the book so much the more authoritative. There hardly seems need for misspellings of French and German words on pages 17, 21, 25, 69, 189, 190, 194, 202, 241. *Schabeisen* (p. 194) is not "graver," but "scraper." The Isabey reproduced as Environs de Dieppe is really Intérieur d'un Port, and is, moreover, reversed. Proper names are misspelled: Guaci for Gauci (p. 121), Bauguinet for Baugniet (p. 117), Bonnington for Bonington (p. 31), Boutet de Mourel for Monvel (p. 178), Soulange Tessier for Teissier (p. 82), Farney for Farny (p. 22), Carl Vernet for Carle (pp. 41, 42, 57, 65, 102), Hyppolite Lecomte for Hippolyte (p. 41), Max Kepler for Joseph Keppler (p. 222). The last-named is correctly given in the Vienna publication already mentioned, and in Weitenkampf's "American Graphic Art" (1912), in both of which books will be found the history of artistic lithography in America, which the present authors say "has never been written, or rather, when attempted, contradictory versions have been the result."

A third issue of the present book might well include a reference to the fact, duly set forth in the two books just cited, that as early as 1808, according to the *National Intelligencer* of January 8 of that year, Dr. S. L. Mitchill had a lithographic stone and ink in his possession. And as to the question of priority of production, Mr. Joseph Jackson has shown, in an article on Bass Otis (*Pennsylvania Magazine of History*, 1913), that the first lithograph by that artist —and the first by any one published in this country—was not the one issued in 1819, and long accepted as the first, but a portrait of Abner Kneeland done for the latter's "Lectures" published in 1818. And, by the way, the plate which appeared in the *Analectic Magazine* for 1819 is not signed "Benj. Otis," but clearly "Bass Otis"; there was no Benjamin. If we note that Kriehuber, Pettenkofer, Aman Jean, Slevogt, Ludwig von Hoffmann, and John Leech are among those who do not appear in the index, be it stated also that criticism is disarmed by acknowledgment in the preface of the probable existence of "commissions and omissions." It seems, however, that mention might have been made of E. G. Kennedy's valuable illustrated catalogue of Whistler's lithographs.

The pictures are generally well chosen, but the reproduction is very uneven. It is frequently satisfactory, but Whistler (frontispiece), Menzel (p. 195) and Bonington (p. 31), for instance, have lost their character in these plates, and Sargent's Study (p. 139) is absolutely ruined. Luckily, it has been excellently reproduced in other publications, three times at least. The plate of Sargent is inexcusable; for the others one may grant that even the least successful may do as memoranda, and that one does not expect more for the price of the book.

When all has been said, however, this is the only good general account of the subject in English, and it emphasizes vigorously the importance and interest of the lithographic medium for the artist. The enormous commercial exploitation of lithography so dominates the general attitude towards the art that it is hard to command a realization of the possibilities for the artist inherent in the process of which its inventor, Senefelder, once wrote: "May the day be blessed when I created it."

Finance

THREE INCIDENTS OF THE DAY.

Two incidents of the past week—connected in a curious way with still another incident of a week or two ago—served to direct the imagination of the American financial community to the future rather than the present. Early last week the Government's foreign trade statement for October not only showed the month's exports to have been $33,000,000 ahead of any other month on record, and the $186,000,000 excess of exports to have similarly surpassed all precedent, but it also proved that, if the results of the two remaining months were to be on the same scale as those of October, the export surplus for the whole of 1915 would be almost exactly $2,000,000,000. In no previous calendar year has the export excess run beyond the $691,000,000 of 1913.

Immediately following this statement, there was announced in Wall Street the formation of a $50,000,000 American corporation, backed by some of the most powerful names in American banking, and organized for the stated purpose of "doing an international business and establishing trade relations with different countries, which will help to make a world market for our products." This end the projectors of the enterprise expect to achieve, through financing the development of American trade with outlying markets of the world, such as South America, China, Russia, India, and Japan. Apparently, the purpose is to provide, through combined individual and company initiative, the stimulus and facilities which governments have provided in the case of such past expansion of a nation's foreign trade as that of Great Britain and Germany.

These two interesting sidelights on the possible commercial destinies of the United States came shortly after the arrival at New York, in the first week of November, of a French industrial commission. It was sent to provide for the trade relations of France and this country after the European war is over. The seven commissioners were practical men, eminent in business pursuits and directly representing all branches of French industry, from agriculture to manufacture. One of the delegates described the purpose of the mission to be the enlisting of the American manufacturer in the work of Europe's physical reconstruction, and, further than this, in the equipping of industrial France for a new career.

Before the war, he pointed out, France used annually to buy $160,000,000 worth of machinery abroad. All of this trade, the commissioner frankly said, will go to the United States when peace returns, and the total amount will be much greater, because "complete equipment will have to be put into the devastated districts." The study of our industrial methods and industrial capacity, with a view to these large prospective operations, was the immediate purpose of the commission's visit.

Of these three incidents, the first suggests the question whether this country's present remarkable position in foreign trade can continue; the second is evidence of concerted and thoroughgoing efforts to make it continue, and the third brings to light some important reasons why it may continue. All of them bear on the problem as to what will be the economic position of the United States, in relation to the rest of the world, after the war is over. We know what that position has been and is likely to be during the war itself. How about that period of uncertainty and vague conjecture which will follow return of peace? On this question, new developments in the financial and industrial markets of the day are constantly throwing fresh light.

Mr. Charles M. Schwab, whose knowledge of the American steel and iron trade is probably second to that of no other expert in the field, takes the ground emphatically that the outside world's demand on American manufacturers will be long continued. The ground for this belief, which is held by many other practical experts, is that requirements for physical reconstruction of the part of Europe devastated by war will be enormous. European manufacturers will not be able promptly to produce the material required, with their working forces so greatly depleted by the loss of war; whereas American producers, alone among all manufacturing communities, will be equipped with the capital, labor supply, facilities, and raw material requisite for immediate rehabilitation. Our country will also—so this argument on the matter runs—be in such relations with what is now the neutral consuming world, through our present position as the central money market of the world, that our trade with such communities will necessarily continue to expand.

Against this view of the probable outcome is placed the argument that the present belligerent States of Europe will be compelled as a matter of vital necessity, on return of peace, to recover the export trade which they had lost during the war. They will accordingly, so the inference runs, produce and sell goods for the export trade at any price which is necessary to regain the business. They may invade the preserves of our own manufacturers. The problem is one of rare economic interest. It is under our Government's consideration now.

For the present, it will perhaps be reasonably safe to let economic judgment rest on the fact that the United States is now in all respects in the most advantageous position of any market of the world to provide what will certainly be the world's requirements on return of peace. It is so, both financially and politically, and it can scarcely fail to retain its advantage in both directions. Perhaps, when this war is over, belligerent Europe will discover that one of the most fortunate developments of the conflict, in the interests of all concerned, is the fact that the United States was not drawn into it. That fact will have resulted in the existence, on return of peace, of at least one great financial and industrial nation, able to meet the financial and industrial requirements of the rest, and at the moment of Europe's economic exhaustion.

BOOKS OF THE WEEK

FICTION.

Are You a
"Store-keeper"
or a
MERCHANT?

Filling the shelves of a store with goods is storekeeping; selling the goods is merchandising. There is a power that will move the goods. It is the power of printed salesmanship—a power that is revealed in all its varied potentialities in the book called

"Keeping a Dollar at Work"

It was written by TRUMAN A. DE WEESE, Director of Advertising for The Shredded Wheat Company, a man who has spent millions of dollars in advertising. A book for the merchant, for the manufacturer, the banker, the business man. It is published by *The New York Evening Post*, printed by The Nation Press, and will be sent to any address upon receipt of the price, One Dollar.

The Nation

NEW YORK, THURSDAY, DECEMBER 9, 1915.

Summary of the News

Congress reassembled on Monday for the transaction of formal business connected with the opening of the session. In the Senate, in the absence of the Vice-President, Mr. Clarke, of Arkansas, was reëlected President pro tempore. Speaker Clark was reëlected in the House on a party vote. Among Republicans welcomed back to the House after brief involuntary retirement from affairs of the nation were Mr. Cannon, Mr. Longworth, Mr. Hill, and Mr. Sulloway. In the Senate only passing reference was made to the fight for cloture defeated by resolute opposition in the Democratic caucus last week. Mr. Walsh, of Montana, reserved the right to raise the question at a later date. Meanwhile Senators continue in dignified enjoyment of immemorial right to debate as much and as long as they please. The President read his third annual address, on which we comment in our editorial columns, at the session on Tuesday.

Growing suspicion on the part of the State Department of activities of foreign diplomatic agents, other than those for which they were accredited to the United States, resulted on Friday of last week in the announcement by Secretary Lansing that the Government had requested the immediate recall of Captain Boy-Ed and Captain von Papen, the naval and military attachés of the German Embassy, on account of "improper activities in military and naval matters." The German Government, apparently surprised at such assertion of sovereignty by the United States, having requested specific explanation of the reason for this action, a reply was sent through the German Embassy on Tuesday, the contents of which have not been made public.

Meanwhile investigations into foreign conspiracies on American soil continue merrily. Buenz and his associates of the Hamburg-American Line were found guilty on each of the two counts in the indictment against them on Thursday of last week. Sentence of eighteen months imprisonment in the Federal Penitentiary at Atlanta was pronounced on Saturday on Buenz and two of his co-defendants. A third received sentence of a year and a day, while the Hamburg-American Line, with fine irony, was fined one dollar. This case being disposed of pending appeal to the Supreme Court, principal interest centres on the investigation by the Federal grand jury for the Southern District of New York into the activities of "Labor's National Peace Council," in connection with the promotion of strikes in munition factories. "Lieutenant" Robert Fay and his five associates also enjoy again the fierce light of publicity, having been reindicted on Monday by the Federal grand jury on five counts, of which one is conspiracy to commit murder.

Dispatches on Monday from Ambassador Page in London stated that he had lodged a protest with the British Government against requisitioning vessels of the American Transatlantic Steamship Company without the formality of prize-court proceedings. It is assumed that the cases of the Hocking and the Genesee were covered in the protest. Dispatches from London of December 3 explained that the British Government's action in requisitioning these vessels was only of a temporary character, intended merely to cover the trip from the ports where the vessels were seized to London, and taken for the purpose of centralizing in London all proceedings against ships of the American Transatlantic Steamship Company.

The only further news of the Ancona case was contained in a dispatch from Vienna of December 2, which stated that Ambassador Penfield had repeated his request to the Austrian Government for a reply to the American inquiry respecting the circumstances of the sinking. The situation will have been complicated by the news which came on Tuesday of the sinking by an Austrian submarine of the American oil ship Communipaw and of an attack on another oil ship, the Petrolite.

In his allocution to the consistory which opened on Monday, Pope Benedict again made a plea for "an exchange of ideas . . . based upon good-will and calm deliberation . . . duly recognizing the aspirations of all," which should pave the way for peace.

Rumors of desire for peace, officially denied, continue to come from Germany. *Vorwärts* last week stated that the Social Democrats would at the next session of the Reichstag put an interpellation to the Imperial Chancellor as to the conditions under which he would be willing to enter into negotiations for peace. The *Tageblatt* also had an article last week supporting the proposal with such ingenuity as almost to suggest an official hint to make the best of an unavoidable situation. We note elsewhere the ingenuous surprise of the Overseas News Agency that proposals of peace have not been put forward by the defeated Allies.

The text of the new agreement signed last week by representatives of the five Allied Powers, whereby none of them will conclude a separate peace without the approval of all, was published in Monday's papers. In the Italian Chamber on Friday Baron Sonnino announced the adherence of Italy to the agreement, and foreshadowed Italian action in support of Servia. The dispatches, however, leave the nature of the action contemplated somewhat vague. On Saturday the Cabinet of Premier Salandra was sustained in the Chamber by a vote of confidence passed by an overwhelming majority.

The see-saw of rumor in Greece and Rumania continues, inclining now to the Allies, now to the Teutonic Powers. Oddly enough the report most favorable to the Allies came on Sunday from Berlin. New proposals, it was stated in Monday's papers, have been made to Greece by the Powers of the Entente, but rumor only, as we write, gives any hint as to how these are likely to be received. Judging from an extraordinary interview given by King Constantine to the Associated Press and published on Tuesday, it would hardly seem probable that the reception will be favorable. The interview bears unmistakable evidence of the King's resentment, to say the least, against the Powers of the Entente. From Rumania the most interesting news that has been received was the report, by a Reuter dispatch of December 4, that the Government would this week commandeer all vessels in Rumanian ports "in the interest of national defence," and the report on Monday from the Bucharest correspondent of the Paris *Temps* that the Rumanian Government had decided to close to foreign navigation that part of the Danube which flows through Rumania.

Reports of the resignation of members of the Austrian Cabinet were confirmed on December 1 by dispatches from Amsterdam stating that the Emperor had accepted the resignations of the Minister of the Interior, the Minister of Commerce, and the Minister of Finance, and giving the names of their successors.

Rumors that the appointment of General Joffre to the supreme command of all the French military forces in Europe, announced on December 2, was but a polite way of removing him from the command of the main French battle front were effectually disposed of by a statement of M. Briand's on Saturday. On Monday General Joffre presided at a full council of war in Paris, at which all the Allies were represented.

The success at Ctesiphon of the British expeditionary force in Mesopotamia, which we recorded last week, turned out only to be the forerunner of a somewhat serious reverse. Accounts from Turkish sources, viewed at first with not unnatural suspicion on account of their mention of the capture of a British flag, were confirmed in essentials by a British official statement of December 4, admitting the retirement of the force, in face of strong Turkish reinforcements, on the well fortified position of Kut-el-Amara, where a successful battle was fought in September.

The Panama-Pacific Exposition closed on Saturday. The recorded attendance is given at more than 17,000,000, and the profit at $2,000,000.

A summary of General Goethals's report on recent slides in the Panama Canal was published in Sunday's papers. It was announced by the War Department on Monday that the President had appointed a commission of ten eminent scientists to go to the Isthmus and "investigate the entire subject of the slides on the Panama Canal and submit a report to the President thereon."

Dispatches from Madrid on Monday announced the resignation of the Cabinet of Premier Dato, as a consequence of a proposed motion by the Opposition, supported by ex-Premier Romanones, to give economic questions in Parliament priority over certain military measures.

The Week

If Secretary Lansing had needed to refresh his memory about the right of a Government to refuse reasons for asking the recall of foreign diplomatic agents, he might have turned to the book of his father-in-law, ex-Secretary Foster, "The Practice of Diplomacy." One chapter deals with the "termination" of diplomatic missions, and clearly lays down the general rule that no Government is bound to explain why any given person has become *non grata*. Reasons are, indeed, sometimes asked. Secretary Blaine asked the Chilian Government why it wished Minister Patrick Egan recalled. But he was not told, and the Chilian difficulty was fortunately settled without a breach. Lord Salisbury informed Secretary Bayard that he did not like to recall Sackville-West without any assignment of the cause, since that would end the Minister's career; and rather brutally intimated that it would be better for the American Government to dismiss him, which it promptly proceeded to do. That course would have been followed in the case of the German military and naval attachés, if the request for their recall had not been complied with. If reasons were as plentiful as blackberries, diplomacy would not give them on compulsion, any more than would Falstaff.

Just how severe have been the requisitions of money laid by Germany upon the people of Belgium is a question which cannot be answered without a close inquiry into the facts, such as is quite impracticable on the basis of the news dispatches. No one knows what the total has been, nor what portion of it has been necessary for carrying on the government. But it is quite as unsafe to make guesses that put a favorable interpretation on the German exactions as it is to set them down as being, in the bulk, downright persecution of a conquered and devastated nation. Referring to the recent statement that the regular requisition of $10,000,000 a month was going to be exacted by extreme measures of confiscation if necessary, a writer, desiring to be fair to the Germans, says that "even if the Belgians were managing their own affairs, they would have to pay taxes, and they would be lucky to escape with the payment of $120,000,000 a year." Now, $120,000,000 a year for Belgium would be about as much per capita as $1,500,000,000 for the United States, and therefore is by no means obviously an amount with which the Belgians would "be lucky to escape" if they were managing their own affairs; and, as a matter of fact, the total of their national taxes in the budget for 1914 was, in round numbers, 350,000,000 francs, or $70,000,000. And this included more than $40,000,000 for service of the public debt, which it is safe to say the Germans are not bothering their heads about. Whether, on the other hand, the tax levied by the Germans is in part applied to local uses which formerly were supplied by the local governments, we are unable to say.

The King of Greece, in his message to the American people through the medium of the Associated Press, has made out as good a case as possible for his own views on Greek neutrality. He scores his strongest point when he argues that for Greece to have gone in with Servia would have meant inviting upon Greece the same fate that has fallen on her neighbor. From what we know of the lack of Allied preparedness in the Balkans, both diplomatic and military, it is probable that Greece would have felt the onset of the Teuto-Bulgar armies. The collapse of the Serbs during the latter part of the recent campaign was so swift that the war now might have been across the Greek frontier, if Greece were a party. Of course, the entrance of the Greek army at the beginning of the campaign would have made the enemy's advance less precipitate, but the odds would still have been against the Allies, and it is not difficult to catch the point of view of a monarch who would hesitate to expose his country to a Teutonic attack after repeated demonstrations of the swiftness and decision with which such attacks are carried out. This is the King's strongest argument in the sense that after sixteen months of war horror it is impossible altogether to condemn a ruler who has chosen to repudiate treaty obligations and promises in order to spare his people.

But this is all that can be said for King Constantine. Unlike King Albert, he preferred for his country peace without honor. He has repudiated a treaty with an ally to whom, as Venizelos said the other day, Greece largely owes her notable territorial gains of two years ago. The King spoke of Salonica, the second city of Greece. He would not be in possession of Salonica to-day were it not for the aid of the Serbs in 1913. Within the kingdom he has deliberately opposed the will of a majority of the nation which was in favor of going to the help of Servia. To his interviewer the King denied that Venizelos represented the will of the Greek people. "When the people reëlected Venizelos, they reëlected him, not his policy. They like him, and they elected him." A silly argument at best, and all the more absurd in face of the fact that Venizelos went out of office on this very issue of coöperation with the Allies, and on that issue was reelected.

Rear-Admiral Fiske's citation, in the *North American Review*, of the Russian armada of 1904-05 under Rozhestvensky, as an argument that great ocean spaces are no sure protection to a country, illustrates again a peculiarity of preparedness logic to which we have called attention more than once. Advocates of a large army for the United States will point to the wars in which the United States has been engaged. What? The United States won all of them, from the Revolution to the Spanish War? Yes, but see how much more easily we should have won if things had been as we want them. So Rear-Admiral Fiske denies that three thousand miles of water between us and Europe are a safeguard:

> This three thousand miles is, of course, a factor of importance, but it is not a prohibition, because it can be traversed with great surety and quickness—with much greater surety and quickness, for instance, than the 12,000 miles traversed by the Russian fleet, eleven years ago, in steaming from Russia to Japan.

What? The Russian fleet was utterly destroyed when it got to Japan? Yes, but suppose a stronger fleet than Russia had, and a more efficient leadership than that of the Russian admirals, and a weaker opponent than Admiral Togo, and it might have turned out altogether different. Perhaps it might; but the burden of proof is on the affirmative.

It is interesting to take up this Russian naval venture of ten years ago. Rozhestvensky's main fleet left Libau in mid-October, and the battle of the Sea of Japan was fought May 27, seven and a half months later. It is true that the Russian Admiral waited a long time in Asiatic waters for Nebogattof's squadron. This left Libau in mid-February and took nearly fifteen weeks to cover 12,000 miles, or at the rate of 800 miles a week. That, indeed, would show that a more efficient fleet than Russia's could cross the Atlantic in three weeks. But the real rate of speed must be found somewhere between Rozhestvensky's seven and a half months and Nebogattof's three and a half months. The latter had only a small cruiser squadron, and to that extent was immune against the delays attending on a great fleet.

What happens to an Armada of great proportions is indicated by what happened to Rozhestvensky; the speed of the whole fleet was dictated by the speed of the "lame ducks." Even Germany is not immune to the law that the progress of a fleet is dictated by that of its slowest member. Imagine the fleet accompanied by transports carrying an army of invasion, and this consideration looms up ominously. We would not enter into specific figures to prove just this or just that. We would only point out that Rear-Admiral Fiske admits that the Atlantic is "a factor of importance, but not a prohibition." No one asserts that the Atlantic is an absolute prohibition to invasion. If we fold our arms and scrap our navy, of course we can be invaded. The trouble with most of your advocates of preparedness is that the Atlantic Ocean and our fleet and our coast defence are to them factors of no importance.

Whether they are talking peace in Germany or not, it is certain that they are not in any of the Allied countries. A separate peace for any one of them has been made impossible by Italy's now having put her name to the treaty, already signed by France, Russia, and England, agreeing to make peace only in concert. And in none of these four nations is there any sign of relaxing determination to see the war through. This attitude is stiffened, if anything, by the military successes of Germany. The Allies in general have a conception of the true posture of the war at present, and of the way in which triumph may come to them, not unlike that expressed by Winston Churchill, in his farewell to Parliament. He said:

> The old wars were decided by their episodes rather than by their tendencies. In this war the tendencies are far more important than the episodes. Without winning any sensational victories we may win this war. We may win it even during a continuance of extremely disappointing and vexatious events. It is not necessary for us to win the war to push the German line back over all the territory they have absorbed—nor to pierce it. While the German lines extend far beyond their frontiers, while their flag flies over conquered capitals and subjected provinces, while all the appearances of military success greet their arms, Germany may be defeated more fatally in the second or third year of the war than if the Allied armies had entered Berlin in the first year.

To the Overseas News Agency of Berlin we are indebted for a certain amount of information, from time to time, but its chief service has been that of an interpreter of the news. It is, in some ways, like the Chorus of a Greek tragedy, explaining what has been done and predicting what is to occur. Now, a Chorus need not be very strong on logic, and the Overseas Agency certainly is not. Its latest feat is an endeavor to clear up in the American mind the whole peace situation in Germany. It is known that the Socialist party is soon to interpellate the Government, not only on the question of the food supply, but on the possible terms of peace. Hence has been made abroad the impression that there is a good deal of peace talk in Germany. But it is important to know exactly why it exists, and the Overseas Agency gravely tells us. It is all "due to the fact that in Germany nobody understands why our enemies, after diplomatic defeats in the Balkans, coupled with military failures, have not yet begun peace negotiations." This makes all clear. Germany is not considering peace. She is simply expressing her indignation that the other nations do not know when they are beaten, and stupidly refrain from suing for the best terms obtainable.

The President's recommendation of a commission to inquire into the question of railway legislation is framed in very general terms. Mr. Wilson plainly has not in mind any proposals of a restrictive character. On the contrary, he refers to the possibility of "bettering the conditions under which the railroads are operated," because the existing problem of transportation causes doubt whether our railways will "much longer be able to cope with it successfully, as at present equipped and coördinated." It is not wholly clear what legislation is indicated by this suggestion; for there is apparently no direct way in which a Congressional statute could enlarge the railway facilities in track, terminals, and rolling stock. Railway men will be inclined to answer that the providing of these increased facilities could be promoted through relaxing present restrictions on the rates, and therefore on the possible earning power, of the transportation lines. But the question of rates is already in the hands of the Interstate Commission, whose work, the President says, "has fully justified the hopes and expectations" of the inaugurators of the regulation movement. It seems probable, on the whole, that if this special commission were to be appointed, it would be compelled by the nature of the case to take up all aspects of the railway situation, including the question whether rates are high enough. The conclusions of the commissioners might be one way or the other, on this as on other phases of the general inquiry. But we suppose that the effect of the President's recommendation, on the public mind, will to this extent be favorable—that it further emphasizes the tendency of the day away from the policy of unreasonable restriction and regulation which some of our State legislatures had recently pushed so far.

Gen. Goethals's recent report on the history of Panama Canal slides stated that failure to take steps against them was largely due to the opinion of advisory geologists that they would not be a menace. He himself now thinks that enlarged excavations will safeguard the Canal's future. He proposes to spend ten months in clearing away the sides of the "prism" at certain points near Culebra, and to remove 10,000,000 cubic yards of earth there—a considerable amount, as the whole original excavation required for Culebra Cut was but 100,000,000 cubic yards. Nevertheless, the President has done well to ask the National Academy of Sciences to appoint a commission of three geologists, three geophysicists, one seismologist, one physicist, and three engineers to go to Panama and study the whole problem with the utmost care. President Van Hise, of the University of Wisconsin, is to be chairman of the commission. These men will give such a study to the whole problem as it has never had before. Gen. Goethals has described the work of the Government geologists as hasty and inaccurate; and, of course, the "innumerable plans for treating the slides . . . suggested by interested and patriotic citizens throughout the country" to which Col. Gaillard once sarcastically referred, were only amateur schemes. It may now be possible to devise a scientific and permanently effective plan of operations.

Mr. Taft, in his somewhat belated reply to Mr. Garrison, accuses the Secretary of "special pleading." This being interpreted must mean, under all the circumstances, that the Secretary had special knowledge, which Mr. Taft did not have. It is obvious that he has been out of direct touch with Philippine affairs. He has had to depend upon haphazard information, some of which was untrustworthy. Even now, in the face of Secretary Garrison's damaging array of facts, he has had to wait several days until he could consult with Dean Worcester and others, and furbish up his case. For a man in such a situation to make the sweeping charge that President Wilson's policy in the Philippines had been "blind and foolish," was itself a blind and foolish thing. No doubt, there has been a certain amount of partisanship in ap-

pointments to office; and the Filipinos have shown how rapidly they are becoming Americanized by themselves seeking office. Mr. Taft is pained at their having created a few "judicial berths." The controversy between Mr. Garrison and the ex-President is now at an end, we presume, and the honors cannot be said to rest with Mr. Taft. We shall hear much more of the affair in Congress. There, it is to be hoped, there will be a closer pinning down of the disputants to the facts of record; and also a desire not so much to make party capital as to do the wisest thing in shaping our Philippine policy for the future.

The general ignoring by the press of the action recently taken by the Unionist party of Porto Rico is another evidence of the indifference of the American public to affairs in the island. A small party in Porto Rico has been carrying on a propaganda for ultimate independence from the United States. The platform adopted by the Unionist party, after a bitter three days' fight, effectually quashes that faction. The history of the whole matter has some interest. In 1906, the Unionist lower house of the Legislature passed a resolution petitioning Congress to grant citizenship to all inhabitants; and it presented the same resolution again in 1910. But during the last session of the Sixty-second Congress, the House seemed to change its mind. It cabled to members of the United States Senate, protesting against passage of the citizenship bill then pending. This action was taken at the instance of the radicals who desired complete independence. They have been led by Señor José de Diego, the present Speaker of the House. The party opposed to the Unionists, the Republicans, has always advocated the grant of citizenship and as close a union with the United States as is compatible with home rule. The new platform, drafted for the specific purpose of settling the differences of opinion between the leaders, disavows the movement for independence, and binds the party to stand together in requesting Washington to give Porto Ricans citizenship. This request has been too long unheeded.

The Old Guard is mostly gone, but it would be a pity to forget what was at all events a picturesque group. Of them all, who was more picturesque than Uncle Joe? But he was more than picturesque, and his first interview upon his return to Washington for his twentieth Congress shows him still the Watchdog of the Treasury, with a penchant for apt quotations. While Presidents and ex-Presidents are citing Scripture the Speaker displays his versatility by turning to Tacitus for an observation that is right to the point: "The peace of nations cannot be secured without arms, nor arms without pay, nor pay without taxes." How fortunate that the economy-loving Democrats (when the Republicans are in) have to lay the taxes for preparedness! Uncle Joe has a note of commiseration in his voice as he contemplates their difficulties. His vote is at their disposal—patriotism before partisanship for Danville—only there is the distressing disagreement between McAdoo and Kitchin as to the condition of the Treasury, which is quite beyond his powers of composing. There was a time, to be sure, when Congress voted $50,000,000 for defence in a lump, and the Treasury stood it without a quiver, but that was long ago. McKinley was in the White House, and McKinley was a Republican, wasn't he? That explains a lot.

The appointments of Philadelphia's new Mayor have created a certain amount of excitement in Philadelphia. Named as a harmony candidate to avert the renewal of the hostilities between Penrose and McNichol on one side, and the Vare brothers on the other, which had much to do with the defeat of the Republican candidate when Blankenburg was elected, Smith has not divided the offices equally between these factions, but has given almost every one of them to followers of the Vares. So startling is this action that McNichol is at the pains of issuing a statement, which opens: "Responsibility for naming the Cabinet, of course, rested entirely with the Mayor. The manner in which the appointees conduct themselves in their official capacity, and the service they render to the public, will demonstrate, in a large measure, the wisdom of such selections." A Hughes might have said as much and nobody would have been doubtful of what he meant, but in the mouth of a McNichol the words require interpretation. If people regard them as constituting a declaration of armed neutrality, such a construction is only a tribute to the definiteness with which McNichol has made his political philosophy understood.

The hopefulness of the Far West stands vindicated in the triumphant closing of the Panama-Pacific Exposition on Saturday with a balance in its treasury of $2,000,000. The dark predictions made when one foreign Government after another refused to exhibit, and when the war cut off visitors from abroad, are all riddled. But it is not the financial success of the Exposition in which the Pacific Coast will take most pride. That success was made possible only by unprecedented contributions of public money in California itself, reaching a sum of $22,000,000, or nearly half the cost of the Fair. The Exposition has scored in drawing an attendance of nearly 18,000,000, figures which represent a flood of Eastern and Middle Western visitors who would never otherwise have made the transcontinental trip. And those in charge of the Exposition may, above all, take pride in reflecting that in its architectural and artistic achievement it stands quite alone. Few expositions have had its harmony of color, sky-line, and general design, and none has had its richness. If its "profit" of $2,000,000 is not to be redistributed among generous guarantors, it is to be hoped that it can be used to give permanence to one or two of the more noteworthy buildings.

Fifty years of devoted and successful work in a single field received appropriate tribute when the golden jubilee of Mrs. Ella Flagg Young's service in the public school system of Chicago was celebrated a day or two ago. Mrs. Young retires this week from the superintendency of the Chicago schools. That her relinquishment of the post is not due to advancing age, or any failure of her powers, is indicated in a remark contained in her response to the speeches of congratulation and gratitude: "When any person is put in a place of responsibility, and that person finds he cannot carry on his work peacefully, it is time for him to drop out. That is just what I have done." It is matter for regret that Mrs. Young, like so many other school superintendents of ability and personal force in our cities, should have had to contend against opposition arising in manifold ways in the School Board; but in spite of this drawback she can look back upon her term as head of her city's schools with the consciousness of solid achievement. A notable feature of the speeches is the testimony they bear to the affection she inspired among the teachers; a thing that is by no means an invariable accompaniment of excellent work on the part of a Superintendent of Schools. One tribute to her general qualifications is specially worth quoting:

> I have seen within a few weeks two sets of resolutions, drafted by separate bodies, suggesting to the board the type of an educator who should be selected for the superintendency, and, consciously or unconsciously, both sets of resolutions perfectly described Mrs. Young.

THE MESSAGE.

No one can read President Wilson's message to Congress without feeling that into some parts of it he put a great deal of heart, while in other portions he is rather cold and perfunctory. If we were to judge by fervor of expression, we should say that the subjects which most deeply interest the President are peace, liberty, justice, the rights of man, the independence of nations, pride in America. In his proposals for increasing our military strength, he displays no warmth. It is rather as a disagreeable necessity, to his mind, that they seem to be put forward. Perhaps, at this point his pen was hampered by remembering his message of a year ago. Then he was for refraining from doing anything which might show that "we had been thrown off our balance by a war with which we have nothing to do." There spoke the instinctive Wilson, undoubtedly. In now accepting the plans of the War and Navy Departments for enlargement of our military power, he is doing something alien to his characteristic impulse.

For the change of attitude he gives no reason. Indeed, he takes pains to say: "I have had in my mind no thought of any immediate or particular danger arising out of our relations with other nations. We are at peace with all the nations of the world, and there is reason to hope that no question in controversy between this and other Governments will lead to any serious breach of amicable relations, grave as some differences of attitude and policy have been and may yet turn out to be." But the facts cry out louder than such words. The real cause of the President's change—if not of heart—of policy is not hidden. There has arisen in this country a marked uneasiness about our national defences. It was daily increasing in intensity. It was threatening to get into politics. It was about to be made the basis of a violent attack upon the Administration. Then the President decided to put himself at the head of the movement for preparedness. Except for the apprehensions growing out of the European war, but for the party manœuvring for position that was going on, it is highly improbable that he would have changed front. He quotes one of the declarations of the Virginia Bill of Rights of 1776. His natural inclination would have been to quote another—namely, that a standing army is "dangerous to liberty." But political exigencies have forced him to do what is visibly distasteful to him.

Where he writes *con amore* and with moving phrase is, first of all, in the opening paragraphs of his message. In them he dwells with great satisfaction upon the way in which disrupted Europe has been confronted by the united Americas. The war has torn Europe asunder; it has drawn the American republics closer together than ever before. The President makes apt use of Canning's famous saying, in pointing out how the union of the countries of the new world in works of peace and international justice may redress, in part, the balance of the war-stricken old world. And in what he says of the gradual disappearance of the dread of a dominating United States, formerly pervasive in the lands to the south of us, and of the new spirit of forbearance and helpfulness in which each of the republics of this hemisphere is to be left by the others to work out its own destinies, there is both truth and eloquence. The President is not at all sure that his Mexican policy will be successful. But come what may, he declares that the United States will not "coerce" Mexico. Here again speaks the Woodrow Wilson whom his countrymen have known.

The other passage in which he displays the greatest earnestness, and even passion, is that dealing with the plots and crimes of aliens in the United States since the war began. Here he writes with sincere and deep feeling and, indeed, with an amount of energy and heat which implies that the Government is in possession of a great deal more evidence of these dastardly offences than the public has been aware of. When the President of the United States uses such definite and burning words, the facts must be blacker than any of us knew. On this subject, Congress cannot be deaf to his urgent appeals. If the laws need strengthening against the men whom Mr. Wilson calls "creatures of passion, disloyalty, and anarchy," strengthened they ought at once to be. When the President asserts that there is proof of plots to destroy property and of conspiracies against the Government—all in order to "serve interests alien to our own"—the country will back him up in the demand that "the hand of our power" should close over the guilty men.

The message is longer than President Wilson's wont, and more disconnected. He seeks, it is true, to find a unifying principle in natural preparedness, or, as he prefers to call it, "efficiency." It is a bounteous word. It fits all questions. It embraces all pet notions. It covers a multitude of taxes. Mr. Wilson stretches it to include the bill for Government shipping which, he says, will again be pressed, though in a "modified" form. About that we shall know what to think when we see it. But the main thing is that the President goes over to the theory, which he rejected a year ago, that powerful armaments are the best assurance of peace.

A VOICE OF REASON.

Americans will read with peculiar pleasure Viscount Bryce's recent words in the House of Lords. A swashbuckling peer, the Earl of Portsmouth, had called upon the Government to get rid of all the "rubbish" of the Declaration of London and prize-court law, to "sweep away all judicial niceties," and fall back on "the old sea laws of our ancestors" which gave them victory. To this, Lord Lansdowne, for the Ministry, made proper though moderate objection, but it was left for Lord Bryce to speak as a man of truly international mind. He contended that even in the heat and strain of a terrible war Great Britain could not afford to ignore the rights of neutrals. In this war England had come forward as the champion of international right and the defender of international law, and with what face could she now offer despite to either? It was impossible for the British to make of their own will and their own necessities the standard of belligerent action. "The plea of necessity," said Viscount Bryce, "had led to most atrocious crimes"; and it was not for England to resort to it to excuse even minor offences against neutral nations.

Now, in fact, almost all that has been said by the English press and English public men, in the way of comment upon the American note of protest against British practices on the sea, has sounded exactly this note of national necessity. It has not been put in the blunt German way, but the spirit of it is the same. "No doubt," said Sir Edward Carson, lately Attorney-General, the contentions of the American Government are "sound in law," but couldn't Americans see that England was fighting for her life? He seemed sublimely unaware that this was exactly the defence set up by Germans for the murder of non-combatant women and children on the Lusitania. Of course, there is a plain moral difference between seizing a cargo of meat illegally, and sending a thousand innocent people to the bottom of the ocean; but the justification of "necessity" is no better in one case than the other. Naturally, the English editors seek to place a humane gloss on their own violations of international law. They speak of the fight of the Allies being for liberty and security for the whole world, and ask plaintively how Americans can give

any importance to legal irregularities in the process. And often they simply fall back on the sheer assertion that Great Britain cannot be blamed for resorting to any measures needful in her struggle for existence. Here, for example, is an extract from the leading editorial of the London *Times* on the American note:

> Behind all the arguments, which are mostly captious and sometimes inconsistent, against the exercise of our "so-called blockade"—occasionally confused with our action to check contraband—there does, however, lie one broad principle. It is that while the Allies are fighting for their lives, and for all that they and America hold most sacred, the United States possess a "general right to enjoy their international trade free from unusual and arbitrary limitations." This is in effect a claim that they shall enjoy exemption from the inevitable consequences of a great maritime war.

Names and dates changed, this might have come last May from the *Norddeutsche Allgemeine Zeitung*.

Lord Bryce, on the contrary, has a vision which pierces beyond present exigencies. He looks forward to the time when England may herself be standing up for neutral rights. More than that, he sees the need which will exist after this war of restoring the shattered fabric of international law. In this forward-looking attitude Lord Lansdowne also placed himself. A great many things would have to be submitted to international congresses after the war. Even "the freedom of the seas," said Lord Lansdowne, is a subject which the nations could profitably discuss, and regarding which they might see fit to formulate new rules. On this particular matter there has been an enormous amount of foolish and confusing talk. Most of it has come from Germany. The clear distinctions which we must bear in mind are (1) that in time of peace the freedom of the seas is already absolute; and (2) that in time of war the only changes which can be sought are in the direction of defining contraband and extending immunity to private property at sea. To read some German effusions, one would think that it was all a question of forbidding blockades in time of war, and of permitting the German fleet to overcome its "geographical handicap," and to be free from attack until after it had sailed out of the North Sea!

These follies will pass with time. So will the notion that this war has forever destroyed the sanctions of international law, and that the world will be governed hereafter only by brute force. A man like Lord Bryce, looking before and after, is under no such delusion. He foresees law and order after the present ravaging. And in helping to prepare men's minds for restoration after all the destruction, voices of reason like his cannot too often make themselves heard.

AUSTRIA'S FUTURE.

Servia, for the time being, has virtually been erased from the map; and the murder of the Austrian heir-apparent at Sarajevo has been avenged—by August von Mackensen, Prussian Field-Marshal. This fact is significant for the future of Austria in Europe, no matter what the terms of peace may be at the European congress. It is not an isolated fact. It is only another item in the account which records German success and Austrian failure in the war on land. Austria's breakdown has been all along the line. To wage a successful war, as we understand war to-day, a nation must satisfy three requirements. The managers of its diplomacy must see to it that the nation enters the war under the most favorable circumstances, with a maximum of allies, with a minimum of enemies. When hostilities are under way it must naturally have generals and armies that can win battles. When a swift decision by trial of arms has become impossible, the managers of its internal affairs must organize the nation for a state of economic siege. To the extent that these three requirements are met the nation may hope for ultimate victory.

In all three requirements the Hapsburg monarchy has been found wanting. The press speaks of the recent Cabinet crisis in Austria as the first instance of its kind since the beginning of the war. People seem to have forgotten the departure of Count von Berchtold, the Austro-Hungarian Foreign Minister at the beginning of the war, who so managed affairs after Sarajevo as to convince the outside world that Servia was hounded into war. Failure Number 2 for Berchtold was the entrance of Italy on the side of the Allies. He left office and was succeeded by Baron Burian, a Hungarian and friend of Count Tisza. The rise of the latter to his present dominant position in the affairs of the monarchy has had its good effect, but the needs of the situation have not been met for the monarchy as a whole. Of the breakdown of Austrian generalship and organization for war we need not speak in detail. Hungary was saved from invasion by the intervention of the German armies. The victorious campaign against Russia was a German campaign. The Austrian armies were more than "braced" by German aid. They passed virtually under the command of the German General Staff. In Galicia the fact may not have been so striking. There the Austrian campaign was part of a general Teuton movement and German direction may have appeared natural enough. But when a Prussian field-marshal takes command on the Danube, the tutelage of the Austrian armies is established. Finally, we have the Cabinet crisis of last week. The men assigned to the economic organization of the monarchy have been inefficient; and William II's presence at Vienna entitles us to assume that here, too, Germany has begun to take charge.

What will be the state of mind at Berlin with regard to Austria, after the war? If the outcome is defeat for the Teutons, there will be a strong inclination to blame the Austrian weak brother. If the result is a bare victory or an inconclusive peace, the state of mind at Berlin will be different in degree, but the same in kind. At best Berlin cannot but regret that the resources of Austria should have failed to be utilized completely through lack of organization and leadership. What could not Prussian system do with fifty million Hapsburg subjects worked to their full capacity! What Germany has done for the armies of Japan, what she has done for Turkey in two years after a disastrous war, what she has succeeded in doing for the Austrian armies under the very stress of war, she could improve upon infinitely during a long stretch of peace. Looking forward to the next war, the German Government, and perhaps the German people, will feel that a just compensation for the responsibilities entailed by the necessity of fighting Austria's quarrels must be greater opportunities for Germany in making Austria prepared. Since, for foreign affairs, the two monarchies are virtually one, the demand will arise in Germany that every part of Austria shall be made as efficient for the general purpose as the Slavs of Posen and Silesia, the Danes of Schleswig-Holstein, the people of Alsace-Lorraine, have been made efficient under German control.

The German Empire has grown through war and commercial union. What the Zollverein began, Königgrätz and Sedan completed. We find the same forces operating today as regards Austria. Already there is very serious consideration of a customs union between the two monarchies after the war. Austrians are admitting that their own economic system stands in need of a heavy infusion of German methods. Austrians speak of their industrial system as antiquated and inefficient. The natural inclination to go to school in Germany must be accentuated by the close intermixture of economic and

financial relations which the war has produced. There is good reason to suppose that Germany has been playing the banker to Austria in very much the same way, though not to the same extent, that England has served the Allies. Thus the end of the war will find Austria's economic system strongly "braced" by German resources even as her armies have been "braced" by German troops and German leadership. Who shall say that this community of interests may not pass into a unity of interest, and that a Central Confederation may not repeat the history of the North German Confederation of 1866?

The obstacles are formidable, to be sure. No state gives up its identity willingly. There is the problem of Hungary. Magyar self-consciousness has thrived during the war, and Budapest's ambitions, directed to domination within the Hapsburg monarchy, will surely balk at the prospect of playing satellite to an enormous Germanic majority. There are minor problems of considerable magnitude. It has been said that Germany does not want the Austrian Germans because it would make the whole empire Catholic. But such considerations must take their chances against the enormous gain to German power that would follow an actual union between the two monarchies.

THE JOYS OF INDEPENDENCE.

In his memorial address on Charles Francis Adams, before the Massachusetts Historical Society, Senator Lodge gave the gratifying information that Adams left an autobiography. One's appetite for that did not need to be whetted in advance, but Mr. Lodge read some suggestive extracts. One of them related to Mr. Adams's estimate of his own career. Written in his old age, it was full of mingled humor and sagacity. He thought his life fortunate in that he had achieved as much as he did, despite his conscious limitations. Then follows this characteristic and interesting self-judgment:

> I have, perhaps, accomplished nothing considerable compared with what my three immediate ancestors accomplished; but, on the other hand, I have done some things better than they ever did; and, what is more and most of all, I have had a much better time in life—got more enjoyment out of it. In this respect I would not change with any of them.

This was unquestionably sincere, as regards Mr. Adams's own feeling about the matter; and it is a close approach to the truth, as regards the facts of history. Despite the abilities and the public services of the three Adamses in his direct line of descent, it cannot be denied that his nature seems to have been freer and richer. John Adams, John Quincy Adams, the elder Charles Francis Adams—the names suggest intensity, indeed, but also a certain austerity; surely not the happy play of a broad-ranging intellect. Of the three, John Quincy had the more expansive temperament, we suppose; yet in his Diary we find many astonishing or perverse literary judgments. For example, he thought there was "something strange" in Shakespeare's diction, which would be considered "very affected now"—*i. e.*, in 1829. Yet a true gleam of his grandson was given in his opinion, at the time Harvard conferred its LL.D. upon Andrew Jackson: "Time-serving and sycophancy are qualities of all learned and scientific institutions." All told, however, there can be no doubt that Charles Francis Adams was correct in believing that he had had a much better time in his life than any of his famous ancestors.

The reasons are not hidden. They lie partly in Mr. Adams's natural endowment; partly in his environment and opportunity; but most of all in his general intellectual and moral outlook upon the world. And in this his marked independence was the most striking element. He insisted upon thinking for himself. He was not afraid to act by himself. The conventions of his time he was always testing. Critical analysis of comfortable doctrines and of established institutions was his practice and delight. He was a great one to stir up the animals. But he never displayed a merely wanton spirit of mischief-making. If he shocked staid people, it was because he wanted to make them open their eyes to the truth. If he tilted at accepted political beliefs, it was from a desire to see something better accepted in their place. Throughout, he was consistent in applying an independent judgment. And looking back upon it all at the end of his days, he found that he had got a durable satisfaction out of it. The insistent reformer had really had a jolly time.

To be reminded that there are such joys of independence is not a bad thing in an age when that quality is in demand. We often have the other thing pictured to us—the strong man who works easily in harness and keeps to the beaten road and is content to wear blinders and comes out at the end rich in troops of admiring friends and applauding constituents and a grateful country. Those are solid rewards, indubitably. They may give a very keen pleasure to the man to whom they come. Yet even in him there must occasionally be a longing for a less fettered life, even if it must be less successful, outwardly. Lord Eldon had steadily played the Tory game all his life, and won very high stakes, yet in his old age he said: "Hang me, but if I had to begin life over again, I would do it as an agitator." It is possible that he meant something of the Adams temper, and had a glimpse of the great comfort to be had from letting the intellect work freely on every subject, from forming opinions in one's own head and fearlessly avowing them. Even upon hide-bound partisans dawns at times a sense of the feeling of gay adventure and chivalrous quest which true independents in politics can alone enjoy to the full. It was a rich old crusted conservative who once said regretfully to a free-lance: "What a pleasure it must be to you to be able to tell Mr. ——— to go to the devil!"

We are not saying that the independent reformer's life is all cakes and ale. He has to renounce many things. Preferment does not often come his way. A man who is so constitutionally and by choice "other-minded" as Charles Francis Adams must not deceive himself into imagining that his fellows will ever rise up and elect him to high office. Others must have the offices; he may have the power. The children of this world are wiser than the children of light in what concerns getting on in the world. Verily, they receive their reward. But so does the Adams type. He went through life no sour-visaged anchorite. His interest in the human pageant was constant and immense. He knew what George Eliot meant by the "laughter of the intellect"; and it seldom failed him as he studied and witnessed the follies of mankind. The great point is that he enjoyed himself hugely as he went along, and that he felt, when the night was drawing in about him, that he had got a lot of fun out of the happy day.

CITIES AND PUBLIC ART.

Some of the views expressed by Paul Bartlett in his recent address before the National Academy of Arts and Letters on the American "mania" for portrait sculpture may be open to question. An example is his belief that America is not only overloaded with objects of art, but is paying too much for them. But on his central thesis there will hardly be disagreement. An incident in Boston, where he spoke, illustrates its force. He discussed the prevalence of "trousered enormities" in most American cities, and condemned the public taste that not only tolerated them, but encouraged artists in

their production. He objected to the memorial instinct that makes a great civic ceremonial out of the unveiling of these lapidary tributes, since it helps to rob the community of courage to rid itself of an atrocity. In Boston they are discussing the ethics of removing the unsatisfactory Saint-Gaudens statue of Phillips Brooks. The city has always disliked it both as inartistic and as giving too ecclesiastical a stamp to Brooks. This dissatisfaction has now borne fruit in a statue by Bela Pratt, which certain citizens wish to see supplant that in Copley Square. This same artistic and moral problem many cities must yet face.

The clearing-away that must be undertaken, in the interest of a beautiful and unified civic art, Mr. Bartlett does well to emphasize. For years we have been passing through a happy-go-lucky period, in which it was possible for any millionaire to offer a box to his city, with the assurance that it enclosed an attractive statue, and have it accepted with gratitude. This hugger-mugger day is now passing; even gift statues are looked in the mouth. It is now usual to call in competent juries before investing large sums in proposed statuary. But the older way has left its legacies that, as Mr. Bartlett suggested, would shock most European visitors. Europe, to be sure, has her own blunders; several years ago a discussion in Washington of the means of removing undesirable statuary from that city elicited from Bryce the opinion that, badly off as Washington was, she had to yield the palm in this regard to London. But one of our mistakes Europe has seldom made—the mistake of raising statues to all sorts of obscure men in a temporary access of local patriotism, without thought of how they would look to coming generations. It is well for a community to give atmosphere to its history by honoring the prominent few connected with its development, even when only of local note. But there are too many statues where there should be only tablets, and too many where there should be nothing. Who is the Baldwin, the Caldwell, the Dodge, the Drexel, with which Philadelphia, for example, begins her list of statues? Thackeray regretted the memorials to dukes and princes in London which jostled those of great warriors, statesmen, and poets, but the former were nevertheless nationally known.

The first thing is to sound a note of caution in the grant of permanent sites for what should at once be a piece of art and a reminder of true eminence. In weighing eligibility, we must remember that reputation is precarious and that horizons shift and standards change. A growing number of cities are reaching the conclusion that the best arbiter is not popular acclaim, but the decision of a jury of laymen, officials, and artists. Such a jury may also be of the greatest value in the general oversight of buildings, parks, roadways, fountains, and squares. Of city Art Commissions the country now has fourteen, with two State Art Commissioners, and a National Fine Arts Commission which is exerting a wide influence. Yet this is a small number. We have only to reflect that nearly two-score cities have "city-planning commissions" to see how slow the parallel movement has been. State juries must necessarily be merely advisory, but the work of the municipal juries, as New York city's active Commission has demonstrated, may reach the very widest scope. In this city the ten members have a jurisdiction that extends to all works of art acquired by the city by purchase or gift; to the removal, relocation, or alteration of any work of art; to designs for public or private structures erected upon public land; and to the lines and grades of all public ways and grounds. Over 200 proposals are submitted to this body yearly. There should be a similar commission in every city of the first class. Meanwhile, it would be well if the country could shake off the unthinking enthusiasm for decoration that has disfigured so many localities with bad taste.

Reform in civic art ought to spread with a contagion proportionate to our modern facilities for travel and for diffusing information. No man who has seen a good example of the work of MacMonnies, Saint-Gaudens, Bitter, or French is likely to have anything but contempt for the soldiers' and sailors' monuments that are eyesores in towns East and West. A city that can adorn itself modestly and tastefully should inspire others to emulation. Yet it is not because of ignorance, but of indifference, that even the largest centres continue in the old rut. Their citizens know the difference between good statuary and bad, just as they know the difference between well-parked and unkempt streets, artistic and ugly public buildings. The problem of dissipating this indifference is one for every sort of public-spirited agency in a municipality to attack. Probably the creation of unofficial art commissions would often lead to action clothing them with official power. And whenever the tide is turned, the opportunity ought to be used to make a clean sweep of past errors as well as to procure new works of art.

Foreign Correspondence

FABIAN CRITICISM OF THE GOVERNMENT—MRS. PANKHURST—THE AMERICAN ATTITUDE.

By JAMES F. MUIRHEAD.

LONDON, November 23.

Mr. and Mrs. Sidney Webb have filed so large a claim on the gratitude and esteem of their fellow-countrymen by their prodigious achievements in the field of economics, trade unionism, coöperation, and the problems of modern industry generally, that one feels something of a qualm in venturing to protest against one side, at least, of their present position. The suggestion that Mrs. Sidney Webb should be made our Minister of Labor, with Mr. Webb as her private secretary, may have been humorous in form, but was certainly in essence more than an empty compliment. A series of interesting lectures, under the auspices of the Fabian Society, is now being delivered by Mrs. Webb, Mr. Webb, and another gentleman who, in respect of his present position in the hearts of his countrymen, may be left nameless. Mrs. Webb's subject last Tuesday was "The War and the Demand for the Servile State."

No report of this lecture has yet appeared, but the impression it produced on three at least of its hearers was that Mrs. Webb took an impossibly intransigent attitude towards the war measures of the British Cabinet. We are all ready to agree that there are faults in some of these measures; we admit that our Cabinet Ministers were not gifted with such superhuman prescience as to realize precisely how they were going to work in every detail. More than one practical confession has been made of this fact by later Ministerial action, and (*e. g.*) an amending bill to the Munitions act has already been promised. But it roused a feeling akin to despair to find Mrs. Webb (if we did not misunderstand her) quite unwilling to recognize any good intention in these faulty measures, and convinced that they formed part of a deliberate scheme to reduce England to the condition of a servile state at the close of the war. The nation to her is apparently divided into the two utterly antagonistic camps of the Capitalist and the Workingman, and the sympathy of the Government lies wholly with the former. Now, to the mere man in the street, trusting to his commonsense and not to the erudition of Blue Books, it seems as if the sympathy between the different classes has never, in his experience, been so keen as at present, and that in particular the well-to-do classes have never had so clear-eyed a vision of the brotherhood of man or so vital a desire to share to the full the sacrifices of the moment. It is surely very significant on this point that a Conservative Minister like Mr. Bonar Law could say in the House of Commons: "We are asking the men who go to the trenches to give up everything, not merely their capital, but perhaps their lives, and we have no right whatever to make a demand like that unless we are prepared to take from every man and every class anything that is necessary to carry this war to a successful conclusion."

Mrs. Pankhurst has been doing such excellent patriotic work since the outbreak of the war, that when an announcement was made that she was to preside at a huge meeting in the Albert Hall on Thursday, November 18, to demand the "loyal and vigorous conduct of the war," some of us immediately made a note of the date and the event with a view to personal "assistance." Shortly before the day of meeting, however, a circular letter from Mrs. Pankhurst was published, from which it appeared that the real object of the assemblage was to pass a resolution protesting against the betrayal of Servia by the British Government, and condemning Mr. Asquith and Sir Edward Grey as "unfit for the great and responsible positions they hold." The Council of the Albert Hall immediately cancelled the meeting, and returned Mrs. Pankhurst's deposit. The manager of the London Pavilion also found himself unable to lend his theatre for the usual weekly meeting of the W. S. P. U. Questions were asked in the House of Commons. Mr. J. Annan Bryce (brother of Lord Bryce), who had been announced as one of the speakers, wrote to the press that he had no idea that the meeting was intended to be one of the nature Mrs. Pankhurst's letter indicated. Miss Carrie Tubb, who was to sing the National Anthem, retired on the same ground. The Navy League, which had taken steps to swell the audience, publicly withdrew its support from the meeting, and advised its members not to attend. The papers also assert that many members of the W. S. P. U consider that Mrs. Pankhurst is exceeding her mandate as president of that society, and are preparing to question her undemocratic control of its policy and funds.

I had the privilege the other day of attending the meeting of a certain society which believes itself to offer a concentrated sample of the wit and wisdom of one of the most important suburban districts of London. The subject for the evening was the attitude of the United States towards the war. I am bound to own that the predominant feeling seemed one of regret and disappointment, though this was tempered by a full meed of understanding and sympathy for the difficulties besetting the path of America in this matter. This, however, was not the only view. The president of the society approved unreservedly of every measure that Mr. Wilson and his advisers have taken since the war began. An M.P. member, though not going quite so far, was distinctly inclined to allow that the patient and waiting attitude of the United States was on the whole likely to prove the best and wisest course for the ultimate peace and civilization of the world. The note that elicited the greatest response was sounded by an eminent K.C., who asked what right we had in such a question to cast a stone at America. We are now reaping the fruits of our own action half a century ago. If Lord Palmerston and Lord John Russell had had the courage of their convictions when Germany attacked Denmark in 1864, and had supported their words by deeds, in all human probability the whole course of history might have been changed and Germany might never have been able to disturb the peace of the world as she is doing to-day.

This paved the way to the analogy of the United States and Belgium, and to the hope that our sister nation beyond the Atlantic might never have cause to regret her action as we regret ours, and even that she might now, at the eleventh hour, at least put on record her disapproval of Germany's conduct. Without pronouncing any definite verdict on this reading of history, we may at least find some significance in the fact that this microcosm of educated English opinion showed no spirit of Pharisaism, but instead recognized that, in regretting the present attitude of the United States, we were *ipso facto* assuming the white sheet of penitence for our own misdeeds. If this chastened feeling in regard to our own share of responsibility for this cataclysm is as characteristic as we may hopefully suppose it to be, it is surely of good omen for the attitude of England in the process of peace and reconstruction. Its recognition of the ethical side of international relations can hardly be regarded as hypocritical, since it involves a confession of our own blameworthiness.

THE TUG OF WAR—FRENCH EXPERTS' VIEW.

By STODDARD DEWEY.

PARIS, November 20.

In France, it is commonly felt that the tug of war—the last strain, in which it is hoped the sinews of Germany will give way—is just beginning. Now this is a "wearing-out war"—*guerre d'usure*—like our four years' Civil War, as Gaston Roupnel has just explained at length. Why do the French think the Allies' sinews of war will outstand the German, this year, and next if needs be, and yet another?

The old metaphor has changed with the old order of war. In this last strain, triple sinews must tug and hold out to the end—men, munitions, and money. Not one must give way. Why does a premature English song hum now less boastingly, more confidently, through the French consciousness?

> We've got the men, we've got the ships, we've got the money, too!

Only to ships have now to be added guns and ammunition, big and little, and these England had scarcely at all in the beginning, and France has had none too much until now. Russia's disasters from sheer lack of munitions are still on every man's tongue. All have had money—among the Allies.

Gen. Cousin has tried to reason out the French faith in their men—"effectives"—soldiers fit for duty. He takes it that Germany and Austria are each able to mobilize eleven per cent. of the population; and that Turkey in Europe and Asia may call out seven per cent., and Bulgaria the same. This gives a grand total of men who have been or may be called to arms by what we may well call for short—*major pars trahit ad se minorem*—Germany: 14,262,999 (percentages of this census are not in round numbers).

Suppose that Russia mobilizes five per cent. of her population (150,000,000) and Great Britain five per cent. of her home population (45,000,000—the census of 1913 said exactly 46,184,500) and receives 400,000 soldiers from her colonies; that France calls into the field ten per cent. of her population, with 100,000 men from her colonies; Italy ten per cent.; Belgium three per cent.; Servia seven per cent.—and ten per cent. for Montenegro; then the Allies have a total of 18,052,000 fighting men. This gives the Allies an advantage of 3,789,000 soldiers.

Of course, in the long run, there is much to give and take. Mere losses—killed, wounded, prisoners—in any calculation will not lessen greatly this advantage in favor of the Allies. Suppose, however, that Russia in Poland has lost more than her proportion, and count an extra 500,000 to her detriment. We shall still have 3,289,000 excess of men on the Allies' side. On the other hand, the number of men that can be drawn from the colonies is certainly underestimated, at least for France. So far the experiment has been successful beyond all expectation. There is no reason why it should not be repeated several times over if the war drags on—to the number of 700,000 good dark warriors, some say. Certainly, Arabs and Kabyles, Moroccans and Senegalese have quitted themselves like men so far; and this brotherhood of arms will have yet further-reaching consequences with the coming of peace—which is better.

Again, if universal combustion keeps up, Russia can draw on the five per cent. left at home in the French general's calculation—7,500,000 more. And any that now seem neutrals and later gravitate to Germany may ultimately have Japanese to face. In sum, when Germany and her satellite nations have used up their last man, the Allies will still have more than 3,000,000 men left. And, by the 1st of June, 1916—which is a more easily imaginable date—the Allied Powers will still have 3,000,000 soldiers in reserve, while Germany will have—what?

Little is to be added to the known story of munitions during this war. The question has been threshed out in the press of all countries. It is known that Great Britain's producing capacity at the beginning was, perhaps, 600 shells a day, while 1,000,000 is short rations along the single French front where fighting has been going on lately. France was better off and long had to help the others, but was not above the safe limit of defence. These nations had not Germany's forty years' preparation. Now serious "drives" have been made, and soon neither guns nor ammunition, big and little, will be wanting to the Allies for their "great offensive." Whether, in the long run, there will be the same inequality in munitions of war as in men in favor of the Allies may depend in part on the effectiveness of the Allies' blockade of Germany—but not entirely. Here, too, the human superiority counts as much as the abundance of material—and the French are confident that, with all the problematic help from Turkey, the wearing out of Germany will go on apace.

It must be the same for the provisions to keep the human machines going. In all that concerns food, it is not only their free commerce of the seas which tells in favor of the Allies. Americans have not noticed sufficiently what her own intensive agriculture is doing for France in the way of supplies to the army and civil population. Senator Méline, who did most for such agriculture years ago, is the new Minister for this. Under this heading, no calculation of time could be even approximate, for the human factor of endurance of privations would upset all calculations as it is doing with the Servians. But it is certain that time will favor accumulatively the Allies.

As to money, the general idea is that Germany is forced to indulge more and more in paper promises to pay, while the Allies have,

to say the least, their credit on a gold basis. I can only point in passing to the self-sufficiency in gold which the French people have been showing all along, pouring their hoarded gold by hundreds of millions of dollars into the Bank of France so soon as their country appealed and without need of any exercise of pressure, taking up from the start successive short loans—and now the first long loan which France has put out since war began, after sixteen months. So the French did after the war in 1871, when Thiers, who knew his people, said, "Everybody will want it!"

This is the sum of Finance Minister Ribot's speech which he made to Parliament a week ago, and which to-day is posted up in every commune of France:

I appeal to all, to the rich as to the poor, to the lowly as to the powerful. Let them all come and seal the unity of the French nation in the face of danger and prepare to-morrow's victory! Let the army of French savings rise up! Like that which fights, it is the army of France, or rather it is France herself. It is that which shall help us to combat and to conquer!

From the 1st of November, 1914, to the 31st of October, 1915, Minister Ribot said, Frenchmen have given to Government more than twelve milliards of francs ($2,400,000,000)—twice and a half the war indemnity which Germany exacted from them in 1871—and gasped at its speedy payment. This last month of October alone, the French Treasury received from citizens of the Republic—in money—1,097,000,000 francs! Of the twenty-six milliards paid out in all by France since the first day of war, only four ($800,000,000) went to foreign creditors for all purchases of the army and civil population. All the rest has been spent in France, and it is in no wise a war loss.

This is the remark of Edmond Théry, who knows figures and finance professionally, and Senator Clemenceau has put it in plain words: "I ask of my fellow-citizens only to forget, for a time, that a righteous calculation of profit may turn in their favor and to rise even while losing nothing (just the contrary) to the height of a disinterested act!"

By next June, we shall see whether here, too, there is not a definitive superiority of the Allies, of whom France is a great part.

ITALIAN LITERATURE AS AFFECTED BY THE WAR.

By MICHELE RICCIARDI.

FLORENCE, November 10.

A telegram published in the papers says that Gabriele d'Annunzio, after having taken part in several aerial raids, during which the enemy's camp was bombarded, is now ill at Venice because of excessive fatigue. This telegram indicates clearly how literary and artistic manifestations in Italy are now absorbed by the war. The greatest, or rather the most widely known, of modern Italian writers is transformed into a military aviator. The others, if unable to participate personally in warlike enterprise, speak or write of the war or for the war. A great orator, who is one of our most eminent men of letters, the Deputy Fradeletto, of Venice, is delivering admirable lectures in all the larger cities of Italy on the subject of the causes and aims of our war; the writers of philosophy and of criticism, in their reviews and in the course of their daily life, are fain to pronounce judgments and carry on polemics—for instance, Benedetto Croce.

Certain novelists and story-writers have become chroniclers of the war for the great newspapers. The publishing firm of Treves, the most important of its kind for literary productions, is now entirely taken up with publications of works of historical, military, and journalistic propaganda about the war. It has published lately, among other less works, the discourse pronounced by Gabriele d'Annunzio in favor of Italy's intervention, and two volumes of Luigi Barzini, who is the strongest and most gifted chronicler and reporter of the war among our colleagues. There is no place at present for the other authors habitually preferred by the house of Treves.

The poets are in most part silent, the older as well as the younger. Here and there the poets of the people improvise patriotic hymns, but these are dispersed in air, and do not reach print. Notwithstanding the fact that the war against Austria has its roots deeply planted in the soul of Italy, it has not as yet found its great poet.

Some writers of comedy announce new works, but it will be difficult for them to find dramatic companies to act them. A few have succeeded lately, in Rome, in getting their last works acted, but they have found an indifferent public and severe critics. Almost all of the companies prefer to act dramas, even if they are old, which have a certain affinity with the conditions of the public spirit. The real comic troupes—as if the public required a little repose by means of a laugh—have better luck for the moment; but the country of Goldoni has not many writers of comedy, and the few that there are almost all write in dialect, Venetian or Napolitan, for the most part.

In short, the scant literary production that exists is almost exclusively journalistic, and limited to chronicles of the war. The rest is almost all silence. The same may be said of painting and sculpture, and apparently also of music.

Some persons in Italy have wondered whether this enforced repose is of advantage, or not, to our literary production. As for me, I believe it will be useful. The most recent tendency of Italian literature has been somewhat idealistic, although in no precise way, and the form has been prevalently that of the spoken language. The *Marzocco*—a literary journal of Florence—is the organ of those young men who represent this movement. Thus, we were separating ourselves more and more from pure d'Annunzianism, which was good, vigorous classicism for us, although he had engrafted upon it a not always happy imitation of Nietzsche. To us, d'Annunzio appears a vigorous continuer of the classic school, which boasts two great writers, Leopardi, derived from the Greek, and Carducci, derived essentially from the Latin, and a contemporary of our own.

D'Annunzio has been followed by a swarm of imitators, who, without reaching the perfection of the literary form of their master, were gradually suffocating literary production in empty-sounding words, and in certain intellectual crookednesses, which were intended to be refined, but were in fact only corrupt and corrupting. On this account, precisely, the attempt of the young writers of the *Marzocco*—with Orvieto and Corradini at their head—already marked out another path, although in some of them there still continued a certain preciosity of style, and in all of them there appeared a vague and undetermined idealistic tendency, always easily distinguished from the false spiritual tendency of d'Annunzio, in the period of his sojourn in France. To the honor of these young men, let it be remembered that they have given new vigor to the effort of Manzoni towards rendering the written speech more agile, by refreshing it at the sources of the spoken tongue.

Italian owes this difference between the spoken and written word first to its direct descent from the Latin, and next to the renewed and prodigious classic effort of the Renaissance. It owes, moreover, to the great memories of the past the influence which classicism has exercised, and still exercises, over our thinkers and writers. The Italy of to-day has the right to live not only upon classic memories. A mode of thinking purely and uniformly Italian, that is of the whole nation, has been in formation. The attempt of the *Marzocco*, therefore, aimed in the right direction, except that the vague, idealistic tendency of the young men was rather irritating æstheticism than a clear and true school of the new Italian thought.

And it is for this reason that the period of rest imposed by the war upon Italian men of letters will do no harm. It may even be said that it is positively helpful in another sense. Our chief novel writers, such as Verga, Capuana, De Roberto, Matilde Serao, all were more or less under the influence of French literature; some of them were influenced by Zola, others by Dumas, others again by Bourget; the youngest were influenced by Hervé and by the Parisian writers of before the war. In the same way, some thinkers, critics, professors, that is, the entire world of the University, were under the influence of German philosophers and scientific men. It is difficult to say whether the novel, understood as it is to-day, can ever be a perfect Italian product. Our great models of ancient times are, in fiction, Ludovico Ariosto and Giovanni Boccaccio. The historical novel has had no great good fortune, notwithstanding the "Promessi Sposi" of Alessandro Manzoni. At all events, the true Italian romance is still to be written. In spite of the great value of the romances of Gabriele d'Annunzio, I think nobody will desire to maintain that his are true Italian romances.

If we can doubt whether the Italians have the aptitude for emulating the French, English, and Russian in the production of novels, nobody can doubt that they have an excellent aptitude, entirely original and their own, for philosophy, criticism, and scientific research. The revolution which the war has produced in the national spirit will be sufficient to make it understood how little the servile imitation of the French novelists responds to the Italian character and nature; and, moreover, how much the humanity of our thought differs from German thought, such as is prevalent even in their greatest philosophers.

The young men who have first adventured into new paths after the war will find other and more vast and concrete fields of observation, and will be able to render more perfect fruit, for the reason that they have already attained, in the several arts, a very remarkable technical perfection.

How Germany Is Governed

DEMOCRATIC THEORY NULLIFIED BY AUTOCRATIC PRACTICE.

By GEORGE M. PRIEST.

Recent months have called forth many queries and many opinions concerning the German system of government. The queries spring in part from a spontaneous, unprejudiced desire for information, in part from a confusion worse confounded by the divergence of opinions that have been expressed, by the conflict of two assertions, apparently irreconcilable, that Germany enjoys a democratic form of government and that it is ruled by the iron hand of an autocrat. In view of present conditions, it may be well to reëxamine the chief factors in German government—German suffrage, the rights and the power of the Reichstag, of the Bundesrat, and of the Emperor—and thus at once to offer useful information to the inquiring and to reconcile the conflict of divergent opinions. We shall see that this conflict has arisen, chiefly, because the authors of the one or the other assertion have considered only the theory or only the practice of German government. For it can be proved, like a problem in mathematics, that in theory the German Imperial Constitution grants the principle, and affords the means, of representative popular government, but that in practice Germany to-day is virtually an absolute monarchy.

I.

Suffrage in Germany is of two kinds, national and state. The people of Prussia, for example, use one system of suffrage in electing their representatives in the Prussian legislature and another in electing members of the national popular assembly, the Reichstag. Only German, or national, suffrage concerns us here.

Between 1867 and 1871 the states of Germany were divided into 397 electoral districts equal in population and in their representation in the Reichstag; each district contained 100,000 inhabitants, and each received the right to elect one representative. At the same time, it was established that the representatives of all districts should be elected by the direct universal suffrage and secret ballot of male citizens over twenty-five years of age. Thus, German suffrage was not restricted by any qualification of property or education, and such restrictions have never been placed upon it. The principle which underlies it is extremely liberal. But in the course of time the value and power of the individual vote have fallen or risen according to shifting conditions within the electoral districts. These districts are still equal in their representation in the Reichstag—each still elects one representative—but the principle of one representative to every 100,000 inhabitants obtains no longer, because the boundaries of the electoral districts have never been altered and the population of many districts has increased or decreased enormously. Urban districts have grown, and, owing chiefly to removals from the country to the city, many rural districts have lost thousands of their former inhabitants. Neither increase nor decrease has affected representation in the Reichstag. Berlin's population has risen since 1867 from 600,000 to well over 2,000,000, but Berlin still elects only six representatives. A Berlin district, once of 100,000, now of 697,000, inhabitants, has only one representative in the Reichstag; another (rural) district, once of 100,000, now of 59,000, inhabitants, also has one. A vote in the Berlin district has less than one-eleventh of the power which a vote in the other district enjoys. Discrepancies like this exist in various parts of the Empire.

When champions of German suffrage assert that Germany enjoys a democratic type of suffrage, they see only the principle, theoretically employed, of universal suffrage without the property or educational qualifications laid down in other countries. In practice German suffrage is not democratic in the sense of "equal for all" so long as the value of the vote varies as we have seen. Indeed, while the electoral districts remain unchanged, the German system grows less and less democratic, because the relative power of the few who continue to live in the waning rural districts is increasing constantly.

By means of this suffrage the German people elect their 397 representatives in the Reichstag, or "Imperial Parliament," for a term of five years; these representatives form the one body in German government which represents and expresses the popular will. The Reichstag enjoys in theory various rights of possible importance which it either fails to, or cannot, exercise with effect. It has a right to initiate legislation, but in actual practice it almost never does. It has a right to ask the Government for reports, but no means of enforcing compliance with its request. It has a right to express its opinion on the management of affairs, but it cannot compel a consideration of its opinion, because it has no control over those in power. The Emperor rules by right of heredity, liable to no processes of law for any offence, and he appoints and dismisses, solely in accordance with his own volition, the Imperial Chancellor and the other chief Imperial officers; ministerial responsibility to the people through the popular assembly does not exist in Germany. Thus these rights of the Reichstag have no practical value.

But the Reichstag does possess rights of fundamental importance. Its consent is necessary to all loans, to all treaties which involve legislation, and to the budget. The Reichstag must give its consent before any bill can become law. In theory, therefore, the representatives of the people can make themselves masters of any situation. They can formulate a bill to suit their own tastes and force the adoption of their bill by refusing meanwhile to consider any other proposals. The German people, through their representatives in the Reichstag, have it in their power to dictate any and all legislation in the German Empire. The idea of popular sovereignty is to this extent a corporate part of the German Constitution.

On the other hand, if the Reichstag refuses to pass a bill proposed by the Government, the Bundesrat and the Emperor, on mutual agreement, may dissolve the Reichstag and order new elections on the chance of obtaining a more amenable assembly. If the newly elected Reichstag should also prove rebellious, it, too, may be dissolved, and so on indefinitely; there is no constitutional limit to the number of possible dissolutions. But an amenable assembly has always been chosen after a single crisis of this kind. The Reichstag was dissolved in 1878, 1887, 1893, and 1906, and after each dissolution a new assembly was elected which passed the bill that wrecked its predecessor. Thus the theory of popular sovereignty has repeatedly broken down in German practice.

Since the German people can, through the Reichstag, control all Imperial legislation, the people themselves are responsible for their government. If they do not exercise control, if in practice they reject the opportunity of self-government granted to them by the German Constitution, they force us to draw striking conclusions concerning them. In the first place, they prefer to trust the wisdom of a few who compose the Government rather than to trust their own collective wisdom. They affirm in this way their satisfaction with, and their belief in, a form of government which concentrates power in the hands of a few; over these few, as we shall see, the people have no direct control whatever. Above all, in voting to accept the will of a few rather than to assert and accomplish their own will, the German people make manifest that they prefer to be governed rather than to govern themselves.

II.

The Bundesrat, or "Federal Council," differs from the Reichstag in many respects. The Reichstag, arising from the people and chosen directly by the people, is the German concession to the idea of popular sovereignty. The Bundesrat preserves the monarchical principle, though in a modified form. The Bundesrat is composed of representatives, not of the people nor of the state legislatures, but of the rulers of the various German states; that is, in twenty-two of the twenty-six states, of an hereditary monarch; in Alsace-Lorraine, of the Imperial Viceroy, who is appointed by the German Emperor; in the Imperial free cities, Bremen, Hamburg, and Lübeck, of the Senate, which is elected directly or indirectly by the people. Each of these rulers appoints to the Bundesrat a certain number of representatives in accordance with pro-

visions of the Imperial Constitution, and each ruler gives his representatives exact instructions as to how they are to vote on every question that is to come up in the Bundesrat. As each ruler naturally gives the same instructions to all his representatives, the votes of each state are cast as a unit; the Imperial Constitution further insures this method of procedure by requiring each state to vote thus. The Bundesrat represents, or personifies, as it were, in an assembly, the whole body of German rulers.

If a proposal is laid before the Bundesrat on a subject not included in the instructions, the representatives must refer the subject to the rulers of their states and must await further instructions before they cast their votes. It is inconceivable that a representative should ever vote contrary to his instructions because, in the first place, his office, which depends in every feature of its tenure entirely upon the will of his ruler, would in such case be terminated immediately, and, secondly, because the Imperial Constitution requires that a representative shall vote as he has been instructed. The actual voting members of the Bundesrat are, therefore, diplomats, not Senators in the American sense. They form in theory a body which in the usual meaning of the words is not a debating or a deliberating assembly. Nor is it such in practice. The German world hears occasionally of lively discussions in the Bundesrat, but there is no reason to think that members of the Bundesrat have ever expressed themselves, much less voted, contrary to the instructions previously given by the rulers of their states. In short, to all intents and purposes the Bundesrat merely registers the will of the German rulers individually and collectively.

The Bundesrat and the Reichstag differ from each other not only in their origins; they differ also, and even more strikingly, in the relative powers of the two bodies. The Reichstag is only a legislative body, while the Bundesrat exercises legislative, executive, and judicial functions. Furthermore, even in the making of laws the power vested in the Bundesrat surpasses that given to the Reichstag. Each body has the right to initiate legislation, but whatever the source of a bill may be, the last act in its adoption as law is the approval of it by the Bundesrat. Thus, if a bill arises in the Bundesrat, it is discussed first by that body and, if approved, is then laid before the Reichstag. If the popular assembly also approves it, the bill must, even if no change has been made in it, be referred back to the Bundesrat and formally passed again by that body. In consequence of this provision of the Imperial Constitution, members of the Reichstag hardly ever initiate legislation, because it is obviously futile for them to discuss a bill before they know the opinion of the Bundesrat. In effect and practice the Bundesrat makes law with the assent of the Reichstag. If we remember the attitude of the German people towards legislation in the critical dissolutions of the Reichstag, it is hardly going too far to say that German laws as they are finally shaped are not the work and the will of the German people through their representatives in the Reichstag, but that they are the work and the will of the rulers of the German states through their representatives in the Bundesrat.

The relative power of these rulers in the Bundesrat varies greatly, unlike the dual representation of the States in the American Senate. The Bundesrat does not represent a federation of states of equal power, but a confederated state with its power distributed very unequally. Prussia has 17 votes, Bavaria 6, Saxony and Württemberg 4 each, Baden, Hesse, and Alsace-Lorraine 3 each, Brunswick and Mecklenburg-Schwerin 2 each, and all the other seventeen states one each—26 states and 61 votes in all. This allotment of votes is based, with two exceptions, on the number of votes allotted to the individual states in the Diet of the German Confederation which came to an end in 1866. In that Diet Bavaria had only four votes, but she demanded and received two more when she joined the new Empire. Prussia, too, had formerly only four votes; but Prussia absorbed six states which opposed her in the Austro-Prussian War of 1866, and when it came to the formation of a new Germany, Prussia added to her original four votes all the votes which the absorbed states had had. In this way she obtained the seventeen votes in the Bundesrat which the Imperial Constitution afterwards confirmed to her. This advantage in number of votes as compared with the number of votes of the other states can be justified on the ground of Prussia's population and extent of territory as compared with those of the other States. Both in area and in population Prussia includes, roughly, two-thirds of the whole Empire. In the Bundesrat, however, she controls less than one-third of the votes. The other states seem to have felt an injustice in this disparity between Prussia's strength in the Empire and her strength in the Bundesrat. They, therefore, made her various concessions.

III.

How majorities are obtained, how bills are passed or defeated in the Bundesrat, is, strictly speaking, a matter of conjecture. Only the results of the meetings of this assembly are published, not the proceedings; the public hears of the proceedings only by the chance loquacity of some member. But we can estimate the influence of the states in the Bundesrat with dependable results.

Germans often dismiss very briefly the assertion that Prussia controls the Bundesrat. They dismiss it on the ground that Prussia has only seventeen votes, that seventeen is still a long way from a majority, and, since the states are independent, Prussia cannot control their votes. On the other hand, Prussia has seventeen votes, and seventeen states have one vote each. Prussia's power alone, therefore, equals the combined power of all these seventeen states. Further, as Prussia has so many more votes than her nearest rivals—Bavaria six, Saxony and Württemberg four each, Baden three (and Hesse three)—Prussia alone is equal to a combination of those four states whose number of votes most closely approximates her own.

But, as has been said, seventeen does not constitute a majority of the votes in the Bundesrat. And how can majorities be obtained? In the answer to this question, the votes in the Bundesrat may be counted as fifty-eight, as the three votes of Alsace-Lorraine cannot be counted, according to the Imperial Constitution, if they give Prussia a majority of any bill under discussion; and we are concerned here first with the means by which Prussia can effect a majority that counts. For this thirty votes are necessary on nearly all measures. In assembling a majority, Prussia starts out with her original seventeen and with the one vote of the principality of Waldeck, which she has controlled, by private agreement, since 1868. If, in addition to these eighteen, Prussia can obtain the six votes of Bavaria, the four of Saxony or of Württemberg, and the two of Brunswick or of Mecklenburg-Schwerin—that is, the support of only three other states—she has her majority. These are, of course, the most favorable conditions numerically for a majority for Prussia, as they involve the support of those states which, next to Prussia, cast the largest number of votes. The least favorable conditions for a Prussian majority are those in which Prussia has to procure the support of twelve states with one vote each. That Prussia can, and does, almost always obtain somewhere the support necessary to a majority is easy to understand. For she can exert tremendous pressure. For example, Prussia can urge the needs of her two-thirds of the area and population of the Empire as compared with those of the one-third composing all the remainder of Germany. Prussia can also employ the moral weight of many imponderables—among others, her own surpassing record of achievements in German history, the omnipresent German sense of obligation to Prussia for the establishment of the Empire, and the economic and industrial prosperity due primarily to Prussian initiative and Prussian efficiency. With such instruments as these, she can rarely have serious difficulty in obtaining the support, at worst, of twelve of the tiny principalities situated in central and northern Germany.

If Prussia be opposed to a bill, not fewer than twelve states—Bavaria with 6 votes, Saxony and Württemberg with 4 each, Baden, Hesse, and Alsace-Lorraine with 3 each, Brunswick and Mecklenburg-Schwerin with 2 each, and four states with one vote each—must unite in order to procure a majority against her. That is, twelve states must unite even when they include those states which, next to Prussia, have the largest number of votes in the Bundesrat. In the least favorable case—when the combination includes those states with the smallest number of votes—

twenty-one of the twenty-six states must unite against Prussia in order to defeat her. Prussia has been wary of defeat in the Bundesrat. She has refrained from introducing bills liable to serious opposition, as a defeat on a fundamental question of policy would surely bring on a crisis imperilling the loyalty of other states to Prussian leadership, and thus the very structure of the Empire. At the same time it is exceedingly difficult to form a combination of even twelve states against Prussia, because the fear of Prussian domination is at least balanced by the jealousy among smaller states. An effective combination has on occasions been formed, and Prussia has been defeated in the Bundesrat. She was defeated in 1876 and 1879 on two railway bills, and in 1878 the Bundesrat voted to place the Imperial Court of Appeals in Leipzig instead of in Berlin, as Prussia wished. But since 1879 the defeat of Prussia in the Bundesrat has certainly happened very rarely. Indeed, it is generally understood in Germany that other states propose legislation to Prussia first, informally, and if she favors the proposal, they leave it to her to push the bill through.

It has been stated in a preceding paragraph that the other states made concessions to Prussia in order to atone for the disparity between her minority of votes in the Bundesrat and her majority of population and area in the Empire. The concessions thus made convey rights of prime importance. In the first place, Prussia alone can preserve the Constitution intact, as only fourteen votes in the negative are sufficient to prevent any change. Secondly, no change can be made in the regulations concerning the army, the navy, customs duties, or excises if Prussia objects. Then, Prussia casts the deciding vote in case of a tie in the Bundesrat, and Prussia appoints the chairmen of all the standing committees on affairs within the Empire. In this way Prussia has virtually the powers of a dictator in German Imperial affairs; and these powers and rights are inalienable. They are Prussia's by the Constitution of the Empire, and nothing short of a revolution and the overthrow of the Constitution can wrest them from her. Spokesmen of Prussia, defending and applauding her exercise of all her constitutional rights, have often declared, as Bethmann-Hollweg in January, 1914, declared, that Prussia will never relinquish any power vested in her by the present Constitution.

IV.

The theoretical power vested in the Reichstag as an agent of the people and in the Bundesrat as a composite organ of the rulers of all the German states breaks down, as we have seen, in practice. Theory and practice in the government of the German Empire are one in the power vested in, and exercised by, Prussia. And who, in this case, is Prussia? The King. For, in accordance with the constitutional provision regarding the composition of the Bundesrat, the King of Prussia appoints and instructs all the seventeen men who compose the Prussian delegation, and he makes sure that they vote as they have been instructed. The King of Prussia controls the Prussian delegation; this delegation, though theoretically held in check by the delegations from other states, does in practice control the Bundesrat; the Bundesrat, though theoretically held in check by the Reichstag, does in practice make the laws and control the policy of the German Empire. The King of Prussia, therefore, in effect and practice dominates and controls the whole body of the German people. He is the ultimate seat of power in Germany. This is the preëminent fact concerning German government.

The German Emperor as such has very little power except in time of war. In time of peace he controls military and foreign matters, but, with the exception of a few executive officers, nothing else. The Bundesrat's consent is necessary to decrees issuing from the Emperor, such as the declaration of war or the dissolution of the Reichstag. The Emperor has no legislative or judicial powers, and, without any veto power, he must, in so far as he is qualified, execute any law which is passed. The German Emperor as such has much less power than the President of the United States. The common conception of him as a ruler of unlimited power in theory and in practice is, therefore, wrong.

The misconception of the Emperor's power arises very easily because the two offices of German Emperor and King of Prussia are, and according to the Imperial Constitution must be, always held by one and the same man. It is the double rôle which this one man plays that makes his part in the German Government so perplexing to people outside of Germany. To the foreign observer he changes from one rôle to the other, according to occasion, with magical rapidity. For example, as Emperor William II he has a bill drawn up by the Imperial Chancellor, but as Emperor he has no initiative in legislation. He therefore turns now into the King of Prussia, and as King he introduces the bill into the Bundesrat through the man who is at once Imperial Chancellor, Prime Minister of Prussia, and the presiding officer of the Bundesrat. Also as King William he instructs his delegates to the Bundesrat how to vote. When the bill has been passed by the Bundesrat, it is laid before the Reichstag in the name of the Emperor. On its return from the Reichstag, the King of Prussia directs what amendments are to be accepted by the Prussian delegation in the Bundesrat. When the bill has finally become law, the Emperor promulgates it. In such a case as this William has changed his rôle four times, but the part he has played as Emperor has been of little moment. He has converted his bill into law as King of Prussia.

The two offices of German Emperor and King of Prussia are inseparable. The Imperial dignity follows *ipso jure* the Prussian crown, so that apart from the Prussian crown the function of Emperor does not exist. There is no law of Imperial succession apart from the Prussian law which regulates the tenure of the Prussian throne. Only he who wears the crown of Prussia can acquire or lay down or perform the function of the Imperial dignity. In legal terms the Imperial dignity is an *accessorium* of the Prussian crown. If a regency were appointed in Prussia, the regent would be *ipso facto* German Emperor.

One more question may arise in the mind of the reader. Since so much power attaches to the office of King of Prussia, whence does a man who occupies that office derive his right to it? He derives his right solely through heredity. The crown of Prussia descends in the house of Hohenzollern by the succession of the first-born male. This is the one and only law which determines who shall be King of Prussia. The Prussian people had nothing to do with the origin of this law, any more than they had to do with the Prussian Constitution, which was not acquired by the people of Prussia, but was a grant conferred by an hereditary King from the house of Hohenzollern. The Prussian people have never had, and they have not now, any voice in determining who shall be their ruler.

The conclusion is inevitable. In theory the German system of government concedes the idea of democratic representative government in regard both to suffrage and to the power vested in the Reichstag. In practice the German system preserves the monarchical concentration of power in the hands of one man. Germany is to-day, in effect, an absolute monarchy.

Poetry

MEDITATIONS ON A BOOK CATALOGUE.

By EDMUND KEMPER BROADUS.

I.

"Steele (R'd), 'A Discourse on Old Age, tending to the Instruction, Comfort, and Caution of Aged Persons,' 12mo, calf (cracked) (1688), 4s."

'Twould have been like you, Dick, to have a try
At just such a preposterous homily.
For if ('twas in your twenties, still, I think)
In that sad interval 'twixt drink and drink
You penned the Christian Hero,—why not this?
How could your editors the item miss?
But dates forbid. The thing could not have been.
Not even you could do it at sixteen!
——Ah, Dick, forgive me! How should I forget
That little scene, imperishably set
Amid the Tatler's ironies—the boy
Calling "Papa" and beating with his toy
Upon a coffin-lid—while she who bore him,
She of the "noble spirit," sorrowed o'er him?
Perchance that father—he was Richard too—
Had left the manuscript, and, mayhap, you

With boyish eagerness "saw through the press"
This volume *in memoriam*, no less.

II.

"Spooner (Shearjashub), 'Guide to Sound Teeth,' 12mo, N. Y. (1836), 2s."

O Shearjashub Spooner—what a name!
Thou hadst deserved a better thing of fame
Than to have written such a "Guide" as this.
But there are compensations; for, I wis,
A man must needs keep sound teeth till he's gray
To utter Shearjashub day by day.

III.

"Wilcox (Ella Wheeler), 'Poems,' bound in limp lamb skin, 8vo, (N. D.), 6s."

That binding is a lovesome thing, God wot,
Which, in its sweet sincerity, doth plot
The soul for us, the very quality
Of what within its tegument may be.

Notes from Two Capitals

LORD HALDANE AND WINSTON CHURCHILL.

By SIR HENRY LUCY.

LONDON, November 20.

It is a striking coincidence of which history will take note, probably not without sharp comment, that the two men who, one at the head of the army, the other the First Lord of the Admiralty, did more than any other to avert peril from the Empire at the outset of the war, have during its progress been shelved. Lord Haldane's national service is chiefly recognized in connection with the creation of a territorial army. That apart, his services at the War Office were invaluable. The deplorable condition of the Department when the Boer War opened stands revealed in evidence given before the South African Committee. When, with something more of suddenness, Germany threw off the mask and embroiled the nations in war, it was found possible in a marvellously short time to mobilize and transport across the Channel the nucleus of an army fully equipped.

Only those in constant attendance at the House of Commons during the seven sessions when Lord Haldane was at the War Office can fully realize the difficulties that beset him in the accomplishment of his task. Daily at Question Time he was beset with questions designed to belittle the scheme—guerrilla warfare, supplemented, whenever occasion might be utilized, by organized attack in debate. It is probable that, failing assistance from a high quarter, even a man of Lord Haldane's courage and determination might have been beaten, and the territorial forces which have made so splendid a record at the front would to-day be non-existent. The late King, with the far-seeing view of a born and trained statesman, early recognized the value of the scheme. At a time when, owing to the Parliamentary opposition alluded to, it seemed destined to failure, his Majesty summoned the Lords Lieutenant of the Counties to Buckingham Palace, and personally enlisted their sympathy and assistance. After that it was comparatively unruffled progress, and when, three years after Lord Haldane quitted the War Office, the bugle signalled war, a trained body of citizen soldiers was ready to proceed to the front.

That on the reconstruction of the Ministry last spring the man who had rendered this superb service to his country should be left out of the Cabinet was in anticipation of the actual event unthinkable. The causes underlying the situation are nebulous. Lord Haldane's dismissal was due to clamor raised in the same quarter that succeeded in ousting Prince Louis of Battenberg from the Admiralty. Upon what basis of specific fact clamor rested is, like the birth of Jeames, "wropt in myst'ry." The most likely suggestions are that Lord Haldane was familiar with the German tongue and its literature, and that Göttingen University shared with Edinburgh the credit of his education. Also, in common with other colleagues in Liberal and Conservative Cabinets, he enjoyed the personal acquaintance of the Kaiser. These reasons seem scarcely adequate for the occasion. None more substantial have been alleged or can be suggested.

What Lord Haldane did for the land forces Mr. Winston Churchill accomplished for the navy. It is true he was more fortunate in taking over a department which for some years had profited by the advantage of the administration of so capable a head as Mr. McKenna, whose public service at this stage of his varied Ministerial career has not received due measure of recognition. Mr. Churchill, coming fresh to the Admiralty, inspired it with renewed vigor. His master stroke, conceived and put into execution twenty-four hours before the actual declaration of war, had a controlling and abiding influence upon its progress. The circumstances attendant upon the *coup de main* exceed the trained fancy of the naval novelist. In the early days of August in last year war with Germany, in spite of pacific protest from Berlin repeated up to the last moment, seemed imminent. To mobilize the fleet would have been regarded as a provocative act, hastening declaration of hostilities. But since King George expressed a desire to review it, a ceremony by no means unusual at this period of the year, there could be no harm in ranging it in full force in familiar waters at Spithead.

His Majesty duly steamed along the far-reaching lines of battleships. Hardly had he returned to the shore and seated himself in the special train taking him back to London before the mighty fleet departed for a destination unknown save to the Admiral in command. When on the 4th of August Great Britain, outraged by the Kaiser's treachery to Belgium, declared war on Germany, lo! the mighty fleet was discovered alert in the North Sea. This paralyzing blow afforded opportunity for flying squadrons of the British fleet to patrol the seas, sweep from them every enemy cruiser, and reëstablish trade routes in a state of security little less complete than that enjoyed while the world was at peace.

The brilliance of these tactics and their success had the natural effect of eclipsing other well-planned, promptly executed doings at the Admiralty under the personal initiative and direction of the late First Lord. Of such was the commandeering of the three battleships building in British yards for Turkey. Had that step not been taken, not only would the British navy have lacked an important increase of strength, but with Turkey submitting to the vassalage of the Kaiser these powerful engines of warfare would have made a marked difference to the cause of the Allies in the Mediterranean and the Black Sea. It happened only this week, on the eve of Mr. Churchill's departure for the front, that disclosure was accidentally made of another conspicuous personal service. This was the creation and establishment of squadrons of armored cars, which, according to the testimony of Lieutenant-Commander Wedgewood, M.P., have been of invaluable service wherever fighting has been going on. So appreciative and grateful were the officers of the Armored Car Squadrons that on Tuesday they gathered in one of the committee rooms at the House of Commons and presented to Mr. Churchill a portrait of himself.

For the time the brilliant political career of Lord Randolph Churchill's son is interrupted, as was that of the father, by a sudden, unexpected resignation of Cabinet rank. Like the Malbrouck sometimes identified with his famous ancestor, Winston *s'en-va-t-en guerre*. Animated by the traditional spirit of the marine, ready to go anywhere and do anything, he realizes Kipling's ideal of "soldier and sailor, too." He may confidently be depended upon to distinguish himself in the field as he has done in the forum. But his severance from political life can be only temporary, and nothing that has happened this week or during the past four years will hamper his progress to fresh triumphs.

JOHN WORTH KERN.

A reëlection to a post of command in which one has worked hard to do his duty is always a pleasing compliment; and the choice by the Democratic Senators of John Worth Kern, of Indiana, to be their floor leader again in the new Congress, is perhaps something more than that, because his coming responsibilities threaten to exceed greatly in seriousness any with which he has ever wrestled hitherto, and the vote means that his fellow Senators do not regard this tawny graybeard of sixty-six as too much of an antique to be trusted in so trying a situation. Mr. Kern, it must be remembered, is one of the few survivors of a school of Middle Western politicians who flourished tumultuously twenty-five years ago, but passed into the shadows about the time the Democratic party broke in two under the weight of Bryan's first candidacy. He is very proud of his association in the popular mind with the giants to whom he used to look up with reverential awe, like Hendricks and McDonald, Voorhees and Turpie, who spent a generation wrangling over such questions as State rights, Southern elections, the payment of the public debt in paper, the increase of the Civil War pension-rolls, and the like—texts which would always set the Demosthenoid oratory of the Mississippi valley swirling and roaring through the halls of Congress with all the energy of the Mother of Waters herself. How much more of a chance for fame those old fellows had in dealing with their

problems than the statesmen of this generation, who have to meet the crises of the hour without waiting for exhaustive debate, and in whose counsels precedent and tradition enjoy only a mockery of respect!

The post of floor leader must tax the patience of a man like Kern, who, it may be recalled, delivered a Chautauqua address in the midst of an exciting political campaign a few years ago, urging the American people to get together, rather than divide, on essential doctrines of government; for it is part of the accepted make-up of a floor leader that he shall be one-sided and one-eyed, and quite incapable of discerning the slightest merit in anything the Opposition puts forth. Moreover, under existing conditions in Washington a floor leader is assumed to be a mouthpiece of the Administration, and President Wilson has a habit occasionally of declaring what shall be a test of Democratic orthodoxy in lawmaking, as well as in broader fields. Mr. Kern, on the other hand, has gone on record with the demand that Congress be left to make the laws without any sort of executive interference—a constriction which would have ruled out half the important activities of our Presidents during the last dozen years.

Kern's lack of enthusiasm about preparedness, in contrast with the disposition of so many of his fellow-partisans to tumble over each other in getting into the vanguard of the movement, is regarded by many of his friends as temperamental rather than the result of conviction. The habit of his life shows in other things. As a maker as well as a minder of the laws, he knew perfectly well, on the 31st of last December, that he would be expected to turn in to the Collector of Internal Revenue, within the next two months, an account of his income for the year then closing, or submit to a penalty for his neglect; yet it was not till the last hours of February were ticking themselves out that, being accidentally reminded, while in bed, of the close approach of the penalty day, he jumped out, drew on his clothes as if the fire-alarm had sounded, made a rush for his office to fill out a blank, and hunt up a neighboring notary to take his affidavit to his return, and by dint of all this hurry got the precious paper into the last mail that would reach the Collector on the first of March. The incident serves to show that, though he may prefer to postpone a disagreeable duty, he does not hesitate to jam it through when the inevitable hour is about to strike. Doubtless, he reasons that the nation is capable of doing the same thing.

Kern is of pioneer stock, and spent the bulk of his youth without knowing what a railway train looked like. He earned his first dollar doing janitor's work in the country schoolhouse where he was a pupil. He had a fight with tuberculosis in his own system, and conquered. He has had all sorts of adventures in politics, including some signal victories over the Taggart crew in his home party, though he has occasionally found himself in factional companionship which he did not warmly relish. By way of illustrating how this may sometimes happen to a man, he tells a story of "Dan" Voorhees, who, while campaigning during the days shortly following the Civil War, was often met with the taunt that all Indiana Democrats were Copperheads. This charge he was resenting one day in a district which had been particularly notorious for its nest of secession sympathizers. "Why," he exclaimed, with a dramatic show of indignation, "half the men who went into the Union army from this county were Democrats!" And pointing his arm, with the index finger outstretched, straight at a group of his hearers whom he happened to know as having served their term in the blue, he demanded in his most impressive manner: "Isn't that true, my friends?" "Yes," growled the foremost of the group, "it's true. Gol darn 'em, they drafted us!" TATTLER.

Correspondence.

A PROTEST.

TO THE EDITOR OF THE NATION:

SIR: It must make the judicious grieve to see the dignified *Nation* feature in its correspondence a communication of so intemperate speech as that by Mr. F. W. Harman in the issue for November 4. How shall the nations ever return to sanity if the journals which should guide and inform the most enlightened neutral opinion open their columns, and thus implicitly lend their sanction, to such extravagant and fire-eating talk as this? Such articles will never convince, they can but infuriate those who are of contrary mind; while they merely inflame to higher passion those who are already hostile to Germany.

But I wish to address myself particularly to one assertion, namely, that the sinking of the Lusitania is no more horrible "than the poisoning of springs in a desert country." I presume the reference is to the charge that Germans poisoned the wells in South Africa. This charge has been repeatedly made, but never substantiated by any trustworthy evidence; while it is on its face extremely improbable, if not absurd, as the following consideration should show:

(1.) It is well known, as the Germans found to their cost, that many of the African wells contain injurious water (cf. Frenssen, "Peter Moors Fahrt nach Südwest," passim).

(2.) Wells are often particularly subjected to pollution in an arid country, since they serve as gathering points for the wounded and the dying.

(3.) The native African has not the white man's sensitiveness on the subject of poison: is it inconceivable that some blacks might have poisoned a well?

(4.) The German officers and soldiers are fully as humane as the English; friends of Germany reject such a charge just as unhesitatingly as would the English a similar charge against an Englishman. And if the accusation be proved against a man of English birth, they would say—and with justice—that it was absurd to allege so dastardly a crime as a typical outgrowth of English character. Yet it is in precisely this way that the suspicion of well-poisoning is being used against Germany.

Germans have been deservedly condemned for their intemperate hatred of England; but is Mr. Harman's letter anything but a cry of hate? B. Q. MORGAN.

University of Wisconsin, November 14.

[If Mr. Harman's views are to be imputed to the *Nation* because it published his letter, it should by the same token be credited with the unfounded assertions of certain German sympathizers whose letters have appeared in these columns. In the present crisis we have deemed it right to give space even to extreme ideas, provided they appear to be representative of a considerable body of citizens. As for Mr. Harman's reference to poisoned springs in South Africa, that rests, of course, upon Gen. Botha's official statement.—ED. THE NATION.]

NOBEL PRIZE-WINNERS IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: In your very just observations on the conferring of the Nobel prize on Prof. Theodore William Richards you put your finger on a sore point when you state that "America does not produce so many Nobel prize-winners that the man thus singled out might not be supposed to have first reached a considerable popular reputation." America has so far produced *two* such prize-winners, for I omit the peace prizes, which have gone to two of our prominent politicians, and are conferred by a different body. The Stockholm Academy of Sciences does not award the Nobel prizes to newspaper wizards, nor by vote of newspaper readers. How many such readers had ever heard the name of Michelson when he received the first prize? And how many will have heard the name of the next one? How many had ever heard the name of Henry A. Rowland, or of Simon Newcomb, or of George William Hill, and how many papers published notices of their deaths? A few years ago one of the Paris popular papers took a vote of its readers as to who was the greatest Frenchman. I have not the results before me at present, but I remember that Napoleon came in eighth, and that the first choice was Pasteur. Well up on the list was Poincaré, not the President of the republic, but his cousin, the great mathematician, whose work was Greek to the voters, but whose reputation was a household word. And yet we pride ourselves on our education, and we spend untold sums on our colleges.

An interesting discussion has recently been held at Harvard on the subject of what students talk about at table, with somewhat discouraging conclusions. I should like to extend this to cover the question what American men in general talk about. Many times, having attended dinners of college clubs, only to be entertained with lectures by Walter this and Big Bill that on the manœuvres of football, and having complained that college graduates should submit to such subjects, I have been informed that athletics is the only common subject of interest to all sorts of college men. If this is true, I think it time that our colleges were closed and that the few desiring an education go to Europe to get it, for the colleges are a portentous and unnecessary expense.

I wish to call attention to the vastly greater interest in the conversation of educated men in any European country than in that of the same class here, and to point out the fact that any sensational statement of a pseudo-scientific nature made in our papers, no matter how absurd, will be eagerly swallowed by the great majority of readers, as is evidenced by the success of President Jordan's hoax perpetrated a few years ago under the title of "The Astral Camera Club of Alcalde."

Nobel prizes will come when the *milieu* of

American life is more propitious for the pursuit of abstract science, and when the public learns the difference between scientific research and commercial invention.

ARTHUR GORDON WEBSTER.

Worcester, Mass., November 21.

A BOMBARDMENT OF UNFORTIFIED BRAINS—OR THE EVILS OF "UNPREPAREDNESS."

TO THE EDITOR OF THE NATION:

SIR: Perhaps the following statements will not be believed in the East, where the West—particularly the Middle West—is generally looked upon as "up and coming," alive to what is going on in the world. Perhaps I paint too dark a picture—but it is the picture that I see.

It all began in a section of freshman English—an average class of freshmen in a mid-Western State university. We were, at the moment, reading Marlowe's "Hero and Leander." Hellespont suggested Gallipoli, and I asked the class—it was quite a chance shot—where Gallipoli was. To my surprise, no one knew. I wrote the word on the blackboard, and was amazed when the class confessed that not one had ever seen the word before!

Within the next twenty-six hours I had met three other sections of freshmen, and had placed "Gallipoli" before them, with the same result. A more advanced course yielded two men who had never heard the name—one of them was on the staff of the university daily paper.

To find out how much the freshmen knew—or did not know—about the war, I set them the following simple examination paper:

"What is the capital of Bulgaria? What countries bound Servia? In what country is Salonica? On what sea is Montenegro?

"Who is in command of the French armies? Who is Prime Minister of England?

"Who are Bethmann-Hollweg, Poincaré, Venizelos, Briand, von Hindenburg, French, Grey, Viviani?

"Name the rulers of the following countries, giving their titles (*i. e.*, King, Emperor, etc.): Germany, England, Greece, Servia, Italy, Russia."

Not a hard examination, one might say—yet no student passed a perfect paper. The capital of Bulgaria was variously named, such cities as Budapest, Nish—and Montenegro!—figuring in the list. Servia was bounded by Germany, Turkey, and Russia; by Germany, Austria, and Belgium—in spite of the fact that I had cautioned the students to reply only to the questions of which they knew the answers. Both Mr. Bethmann and Mr. Hollweg received positions in the German army; Salonica was situated in Italy; Montenegro on the Ægean and Black Seas, as well as on the Adriatic; the command of the French armies was given to Jaffrey, Goffre, Jaffe, Joeffre, Goffee, Gaffre, Joffrey, Geffre, and Jaffé; Poincaré was, in turn, Prime Minister of France, a French commander, and the French Ambassador to the United States. Von Hindenburg was named as "Prime Minister of Germany"; Vivianl, as "investigator [instigator?] of the war in Italy," commander of the Italian army, Italian Prime Minister, a Russian general, and Queen of Servia! The student who identified Bethmann-Hollweg as German Ambassador to Washington may not have been far wrong.

Venizelos was called a Russian general, a French general, and the Spanish Prime Minister. Several named him Prime Minister of Crete; two called him a French secretary, one a former South American President, and others an Austrian leader and a Mexican general. One man put him in the plural—"Venizelos are the members of the Greek Cabinet who resigned." Briand's versatility was hinted at, for he appeared as President of France, a member of the English Cabinet, and a German leader!

The rulers and titles gave much trouble. England, if one might believe the students, is under the sway of Kings Edward VI, VII, VIII; George II, IV, V, and VI. For some reason, George III was slighted. Italy—according to one girl, who knew but one other ruler, him of Germany—is controlled by the Pope; though, to do the class justice, a surprising number knew King Victor Emmanuel. Some, it is equally surprising to note, knew that Germany was ruled by a Kaiser, but did not indicate his name. It is not so remarkable that many supposed the Prime Minister of England to be Lloyd-George, Churchill, or "Lord Kitchen."

"The capital of Bulgaria," wrote one honest youth, "is not known to me. I am totally ignorant of what countries bound Servia. My lack of knowledge extends to all the questions." He was not alone.

Another section—which had a slightly different paper—showed weakness in geography. Sofia was variously placed in Rumania, Bulgaria, Servia, Russia—and one student called it "a country in southeastern Europe." Nish appeared more than once in Belgium—and in Germany, Greece, and Poland, as well; Gallipoli in Italy, and on "a peninsula between the Black and Caribbean Seas." Triest was in Russia, Germany, and Turkey; Bulgaria had coasts on the Adriatic, Black, and Caspian Seas; Louvain was commonly confused with Lorraine—and one authority described it as "a small country about to enter the war." Bethmann-Hollweg was called the Prime Minister of Russia—and "a small plain in Alsace-Lorraine." Louvain was also confused with the Louvre by him who wrote: "It is a city in France, and is noted for its great art gallery. The Mona Lisa was stolen from this gallery." It is something that a student had ever heard of the Mona Lisa—and knew that it had once been stolen!

Why linger over these wild guesses? We all remember the story of the English woman who asked if New York were not the capital of Philadelphia—and our own knowledge of South American geography is generally of the slightest. We also make mistakes quite as comical (to others) as those of the identifiers of French, one of whom wrote, "French is Col. French, of the English army" (perhaps to be on the safe side); and the other of whom—playing still safer—said: "French are the people from France."

Wherefore this exhibition? The class is willing—nay, eager—to admit its ignorance. "I have no time to read the papers," says one, voicing the state of many. "My university work takes all my time." A girl said: "I don't have time to read war or memorize men's names. The war news is too *horrible* to read." Two more go into the subject at greater length: "Current events is [*sic*] not very interesting to me, for the simple reson [*sic*] that so much of the reading matter is nothing more than a collection of dry facts. This uninteresting data [*sic*] has a tendency to keep me from reading current literature, and, of course, my knowledge of vital topics and worldly progress is kept very far inferior to that of one who does read.

"The library contains many modern magazines, which give the important events of the world's happenings in concentrated form, but the school work is so exacting that one does not have time to spend looking up magazines and read unimportant matter which does not pertain to his life's work.

"Many of our news reports are so unreliable that it is not worth the time spent reading them. My idea is that of reading nothing but absolute facts, and therefore I do not read the newspapers. This fact has also kept me from knowing more about current events." No comment is necessary—the student's position is clear. Yet does not the war "pertain to his life's work" and to the life work of all of us? How great a contrast to the one who held nothing of interest to humanity alien to him! Can this be the result of Vocational Education—just appearing from the High School?

". . . The reason for my ignorance," writes another, "is that knowledge of such facts as are presented in the newspapers and magazines are [*sic*] worse than useless. When the war is over, and matters are cleared up, it will be found that most of these so-called 'facts' are not at all true.

"Nothing could be more confusing than the newspaper accounts as to the causes of the war. Each paper takes a different view, and it is hard to tell which paper shows the greatest ignorance of European history."

Here is a mirror of a mid-Western State university's freshman class on the great war. Men have marvelled that an authoress, keenly alive to her surroundings, should have lived through the stirring days a century ago and left, in her novels, no echo of Napoleon. We marvel more that in this day and age a group of educated youth should feel so little interest in the events which are shaking the world to its foundation. But, having marvelled, we can wonder no longer at the strength of the "peace at any price" party. Why fight—even if we are insulted? That is an unimportant matter, and does not pertain to our life's work.

I wonder how many freshmen—or seniors, either—are aware how near we were to war last summer, and what the trouble was about?

X.

"WHILST."

TO THE EDITOR OF THE NATION:

SIR: It may interest your correspondents to know that at the time of the rubber boom in London, in 1910, some of my friends were preparing a prospectus which was to be sent to possible subscribers of shares. After the promoters and their solicitors, auditors, directors, and rubber experts had thoroughly studied the prospectus from every possible angle it was submitted for final revision to a barrister. His changes were chiefly the crossing out of two "whiles" and replacing each by "whilst." For this work he received a fee of fifty guineas and all concerned thought that the fee was well earned.

WILLIAM HILLMAN.

Palo Alto, Cal., November 8.

Literature

A GREAT CHURCHMAN.

Henry Codman Potter, Seventh Bishop of New York. By George Hodges. New York: The Macmillan Co. $3.50.

Dean Hodges's biography is a fine monument to a churchman of whom his city and country are justly proud. Friends of the Bishop will recognize as not its least service the removal of the mistaken notion entertained by not a few that the subject of it was essentially a publicist and man of the world, who, without strong religious vocation, succeeded in an ecclesiastical career by virtue of abilities and ambitions which would have made him eminent in any sphere. In the face of this book alone, we should say such a notion is no longer tenable. And from his acts, his words, his books, and the whole tenor of his life, it would seem plain that, whatever his faults or frailties, the inspiration of his devoted and laborious career was essentially religious. He owed no divided allegiance. His deepest conviction was a belief in the Christian religion—the spirit of Christ speaking through his church to the soul of man—as the supreme solvent of all human problems.

To the layman with no special ecclesiastical interests the early part of the book is hard going. One is glad to be done with the necessary information as to forebears, remote and immediate, and as to the Bishop's childhood, youth, and young manhood. Nor is there much of significance in the story of the rectorships in Troy and Boston. It is not till the Grace Church period that Dean Hodges really holds his reader. There or thereabouts in the book we begin to realize that we are following the career of an extraordinary man whose abilities and achievements command attention, and with whose personality we would gladly become better acquainted.

In doing full justice to the Bishop's qualities, this frank and loyal biography neither glosses over nor conceals his limitations. These we may note, and at once be done with them. Though Bishop Potter's reading was wide and his mental digestion strong, he was, in the technical sense, no scholar. He was not a profound theologian nor a profound philosopher; nor again was he a great priest, preacher, or devotional writer. For all that the qualities that make a great bishop were his.

Conspicuous among these qualities were an administrative faculty of a high order and a rare faculty for organization. Tact and diplomacy were his, also, in an eminent degree; witness the issue in affectionate relations of the differences between such opposing opposites as the Rev. Dr. Heber Newton and the Rev. Mr. Richie, on the one hand, and their reverend father in God, on the other, as fully recorded in this volume. Patience that could bide its time was one of his virtues; and poise was his, and cool deliberate judgment—trophies these of a victory of character over a temperament by nature hasty and headstrong. Tolerant he was, too, and judicial, dispensing justice with an even hand. His churchmanship was—as the ideal bishop's should be—catholic in the proper sense, or, to use his own favorite word, comprehensive.

Of the three parties in the Church, irreverently labelled "Low and lazy," "Broad and hazy," "High and crazy," it was with the middle group that the Bishop naturally took his place. Officially he would identify himself with none of them, but rejoiced that his ecclesiastical fold could shelter alike the High Churchman suspected of the Romeward list, the good Evangelical, and the Latitudinarian poised upon the ragged edge of heresy. This impartiality, from which the Bishop would not willingly swerve in matters small or great, was simply illustrated in the response to an appeal from a young man who himself now wears the robes, but at the time in question was on the point of study for the ministry. He was hesitating between two divinity schools of different stripes, and earnestly sought the Bishop's advice to solve his problem. "To which school should I go?" was the question, and the Bishop's characteristic reply, "To whichever you please, my son, and God bless you."

Bishop Potter could temporize, even, perhaps, compromise, when he chose, but this was not for the want of resolution or courage. None of his qualities, in fact, won for him more devoted friends than his courage—a courage undaunted by storms from whatever quarter. In the case of Dr. Briggs's reception into the Episcopal fold, it boldly faced powerful foes, High and Low, within the Church. In the case of his support of the Subway Tavern, an experiment with a sort of a sanctified barroom where drinks, hard and soft, were dispensed, and where, as the Bishop stood between bar and lunch-counter, the Doxology was sung and the ill-fated house of refreshment was in a manner consecrated, he exposed himself to the opprobrium poured upon him by Puritans and intemperate temperance advocates. When attending the General Convention in Richmond, he defied social prejudices by inviting a negro bishop to dine with him, glad of the conspicuous opportunity to exemplify his democratic convictions, and undismayed at the teapot cyclone that swirled about that social episode. On another occasion he attacked the spoils system in the presence of a gathering that included, among a group of potent practical politicians whose withers were not unwrung, a President of the United States.

In paying a handsome tribute to such of Bishop Potter's qualities as we have noted, Dean Hodges does not forget certain minor traits and graces of his personality which the story of his life profusely illustrates, and which did much to endear him as a man and to extend his usefulness as an ecclesiastic. As you turn the pages of this book, you recall if you knew him, as you realize if you did not, the fine distinction of his presence; his manners—those of "an ideal prince," his biography justly calls them—his urbanity, suavity, dignity, ease; his mellow and inexhaustible humor; his rare social gifts, and his capacity for social pleasure. He was everywhere at home and everywhere welcome, and loved the company of his fellows, gentle or humble. He was a man of the world in the right sense, and as such, beyond any other of his generation, he interpreted the world to the church and the church to the world.

Before the reader is midway in this book he is sure to have a lively sense of the extraordinary fitness of the man, with his high abilities, trained mind, and disciplined spirit, for his episcopal office, and, if he be an alert reader, he will cast about to discover what, if any, special and distinctive use Bishop Potter was to make of his splendid equipment for the episcopacy. A distinctive use the Bishop did make of it. He realized that religion was no longer content with the fearful business of plucking the individual soul from imminent damnation, nor in the quiet round of parochial ministrations. It was brooding over the vast problems of the modern workaday world, and longing to lend a hand in the solution of them. To this labor the Time Spirit prompted the churches. It was the distinction of Bishop Potter, if we read aright his career and the book that records it, to be in the van of the churchmen of his day who sought to make religion a vital force in the settlement of modern social, economic, and political questions; to penetrate the civil order with the Christian spirit; to infuse a new soul into the social fabric. For such gifts and abilities as his this task called. His genius was for large leadership. In him were the qualities that made the cardinal-ambassador of the Middle Age or the statesman-bishop of England. For all his capacity for great affairs, he still remained essentially the churchman. So conspicuously was this true that, when our metropolitan city, or the nation, waited to hear the voice of religion upon matters of great moment, it was as often as not our bishop, who, as if by common consent, and by virtue of his fraternal catholicity and ripe wisdom, was made the spokesman for all.

This biography is a faithful sketch rather than a speaking portrait with the color and warmth of life. It is not a biography of the detailed and expansive type. From it, however, the subject of the book, as man and bishop, in his public and official capacity, stands forth impressively. To the meaning of his life the author finds the true clue—a clue for the lack of which many an estimate of this many-sided character has gone wide of the mark—and follows it carefully through the more important events of his career. But, in the case of a personality of such rare charm, many would have been grateful for a more intimate and human picture, with a fuller indication of the lights and shades and subtleties that were part

of a nature far from simple. As it is, it remains to be thankful for an important work, adequate and excellent in its kind.

CURRENT FICTION.

Plashers Mead. By Compton Mackenzie. New York: Harper & Bros.

In speculating upon the nature of the "new novel" in English, Mr. Henry James has found that its distinction from the old novel is chiefly determined by some "possession" or "saturation" of the author, which enables him to deal exhaustively with some confined object or idea: a process which Mr. James calls "squeezing the orange." So Mr. Bennett squeezes his Five Towns, and Mr. Wells his own extraordinary mind, and the younger writers, most of them, the spirit or propaganda of youth. The fault Mr. James finds with their work as a whole is that it does not clearly drive at anything, that it has no distinct meaning unless as a record of impressions or, if you like, facts. "We have had," says our critic, with his usual cumbersome neatness, "on the merest life system, or that of the starkest crudity of the slice, all the entertainment that can come from watching a wayfarer engage with assurance in an alley that we know to have no issue—and from watching for the very sake of the face that he may show us on appearing at its mouth." Just one of these younger novelists, Mr. Compton Mackenzie, is rather hesitatingly suggested as an exception: there are certain signs that, "moved by life, this interesting young novelist is even now uncontrollably on the way to style." Here, if ever, one may fancy Mr. James chuckling, as a good Father might who espied his free-thinking nephew unconsciously heading towards Rome. But the point he wishes to make is doubtless that style is at all events an object, and that the writer who is moved to it by life will not be condemned to blind alleys.

Now, whatever meaning we may attach to the word style, Mr. James quite frankly means by it attention to form, and even to form as phrasing, for its own sake. There is plenty of evidence in "Plashers Mead," as there was in its predecessors, that Mr. Mackenzie is studious in these matters. He is not, like most of his contemporaries, satisfied with extemporizing; he composes: "The snapdragons lolled upon the sun with gold-bloomed anthers, and drank more and still more color until they were drenched beyond the deepest dyes of crimson, extinguishing the paler hues of rose and chrome which yet at moth-time would show like lamps when the others had dulled in the discouragement of twilight." Such a passage represents his pursuit of style at something like its best; but what is there to say of phrases such as "The gong sounded upon the luteous air of evening," to be found on the same page? In the end, the reader is bound to ask what the noise, whether melodious or brusque, is all about. In this instance we can only reply that it is about the same old thing, the thing so dwelt upon in "Carnival" and "Sinister Street"—youth, Oxford youth, whether undergraduate or fledgling just "come down"; such youth, moreover, of a single type, the hypersensitive dilettante, the self-absorbed experimenter with æsthetic and erotic experience. Guy Hazlewood is somewhat more avid and less merely languishing than his friend Michael Fane, but he remains a cub. It will be interesting to see whether in the future, with or without the aid of style, this undoubtedly brilliant performer will ever be able to produce a man. In the Pauline of this tale he has made a woman, though one piteous and frustrate.

The Co-Citizens. By Corra Harris. New York: Doubleday, Page & Co.

Surely an enemy hath done this. We trust we shall not be doing the author an injustice in describing her book as a peculiarly subtle and underhand attack upon the feminist cause. It is the more effective because Mrs. Harris presents so successful a simulation of sympathy with that cause as to deceive any reader less wary than the present reviewer. Briefly, Mrs. Harris imagines a small community of the South, deplorably man-ridden, in which the large majority of the women are engrossed in such pursuits as housewifery and the bearing and up-bringing of children. On the surface, the women appear to be content with these ignoble avocations, but, as we presently see, and as the male tyrants of Jordantown were finally taught, beneath this apparent acquiescence in servitude there ran a deep current of revolt which only needed a little encouragement to burst its dams and engulf the entire population. The impetus was given by the extraordinary will of the widow of Jordantown's wealthiest citizen. In her death this lady dared to throw off the yoke of masculine domination which she had suffered in meekness throughout a long life: she left all her money to endow a foundation, directed by an administrator and two administratrices with absolute powers, the purpose of which should be to promote by every means the cause of woman's suffrage in Jordan County.

So far this is very good, and the feminist may well tingle with gleeful expectation. But then comes the author's betrayal. Having set the women of Jordantown well on the road to obtaining their rights, she delivers them—respect for Mrs. Harris's ability compels us to assume deliberately—into the hands of the mocker and the ungodly; for the methods by which the directors of the Co-Citizens' Foundation Fund of Jordan County set out to achieve their end illustrate precisely that unscrupulousness and extreme elasticity of conscience which, it is the contention of the scorner, may be expected to mark feminine adventures in politics. The shameless betrayal is emphasized at the end by the confession of one of the protagonists, made to a male creature, that she is tired of politics, and is anxious to darn socks.

Minnie's Bishop. By G. A. Birmingham. New York: George H. Doran Co.

When Canon Hannay set up for a humorist of the lighter sort, he incurred the usual obligations to his audience. Mark Twain never lived down his jumping frog, or Jerome Jerome his three men in a boat. "Minnie's Bishop" and two-thirds of the short stories here collected are in the frankly facetious vein of "Lalage's Lovers" and "Spanish Gold." The others are in one way or other more serious. One of them, "Bed Clothes," throws light, if light is needed, upon the Hannay-Birmingham phenomenon. It concerns a story of extraordinary merit, but daring and almost blasphemous character, which turns out to have been written by a country curate. The curate quotes verbatim from the story in a sermon preached before the editor to whom the story has been submitted. The editor accuses him of having quoted, "apparently in all good faith, the wretched moral patitudes which the story satirized." . . . "Listen to me," says the curate. "Those things which you call moral platitudes are truths. I believe them. I cling to them. They are the things I live by. They are sacred. But—— I hear them every day of my life and all day long. . . . I believe them. But they get to be like bed clothes, like blankets and quilts laid over my mouth and nostrils. I'm smothered by them." So Canon Hannay may have been smothered by the cloth, and have found grateful relief in making fun of it and of himself. There is an instance in this very story—the rural dean who offers the London editor a paper on the history of the monastic orders. Canon Hannay's most serious work is, we note, a treatise called "The Spirit and Origin of Christian Monasticism."

But this volume is chiefly interesting because it contains a number of stories and sketches which show the author in a serious mood as an artist. They interpret the pathos and the tragedy of the Irish peasant's life and of Ireland as embodied therein. Several of them, notably "The Child of Our Hope" and "This Lost Land," have a touch of symbolism, and reflect, as so much of the later Irish writing does, the haunting melancholy and wistfulness of a love for Ireland which is almost in despair.

The Trail of Black Hawk. By Paul G. Tomlinson. New York: D. Appleton & Co.

It is a pity that some of the energy and brains devoted to child study and to various forms of educational experimentation cannot be transferred to the task of improving the quality of juvenile fiction. There is no reason why a story for boys should be, as this and many others are, wooden in characterization, absurd in incident, and stupid in dialogue. To be sure, boys are tolerant of these things, provided the author supplies plenty of Indians, battle, murder, and sudden death; but surely they would prefer a story which combined with the necessary action and bloodshed a certain degree of truthfulness and intelligence. This

story has an historical background, and it is morally harmless; but it has no other merits. The colored picture on the cover is in its absurdity typical of the story. An Indian impossibly costumed and standing in the position of a bowler whose ball has just left his hand is watching his tomahawk, which is suspended in mid-air on its way to split the head of an enemy appearing above a log in the distance.

THE RECOGNITION OF GOVERNMENTS DE FACTO AND DE JURE.

The Recognition Policy of the United States. By Julius Goebel, Jr. Columbia University Studies in History, Economics, and Public Law. Vol. LXXI. No. 1. New York: Longmans, Green & Co. $2.

This treatise of 228 pages is devoted to a question of much practical as well as some theoretic interest, *viz.*, the principles to be followed by a State in determining when to recognize either the creation of a new State out of some preëxisting political community, or such a change effected by force in the government of an existing community as makes its government a new one. The inquiry into these principles which the treatise attempts is historical rather than theoretical, and is confined to cases in which the United States has acted, but it is prefaced by a long disquisition on the more general and abstract aspects of the subject, embracing a chapter on Legitimacy, Revolution, and Recognition and another on The Theory of Recognition, in which the views of the older writers on what constitutes legitimacy, the nature of sovereignty, and the legal relations of States to one another are discussed. This introductory part of the book contains some useful statements of the views of eminent writers, but it is rather vague in thought and often needlessly technical in expression. That which is of substantial value in it might well have received a more simple and condensed expression.

The utility of the treatise lies in the historical account which follows the views which have from time to time guided the policy of the United States in deciding when to accord and when to withhold recognition. This account very properly begins with a narrative of the proceedings by which France entered into relations with the Government of the United States during the Revolutionary War. Dr. Goebel truly observes that in those proceedings the question was not so much one of recognition as of intervention. France, partly from regard to the principles of legitimacy which then held sway in Europe, partly because it would not have been worth her while to recognize unless she was also prepared to intervene (as, indeed, recognition would have been a conspicuously unfriendly act towards Great Britain), would not have recognized the new United States Government unless she had been prepared also to support it by arms. That she did so support a revolted colony was in those days a new departure of great significance, and it bore its appropriate fruit in 1789. Dr. Goebel examines the views of Jefferson and points to his words and acts while Secretary of State as being the first clear indication of the doctrine that a new State, or a new government in a State, is entitled to recognition when it has established itself *de facto*, that is to say, when it is evidently master of the situation, able to repel attacks, and to maintain some sort of regular public order. Jefferson adopted this principle as issuing from his view that every people possesses an intrinsic natural right to determine its own form of government, and may properly exercise that right by rebellion against any existing form of which it complains. The principle was consonant with American political theory, and was followed when questions arose from 1810 onwards of recognizing the new governments in the Spanish-American States which were then beginning to dissever themselves from the old monarchy of Spain. It was followed all the more heartily because those new governments were republican, for to be a republic in form was in those days a thing which commended its government to all the friends of freedom, since they had not yet learned from experience the truth that form and name have little to do with practical excellence. When, however, in 1861, most of the slaveholding States separated themselves from the Union to form the Southern Confederacy, a new situation arose. They soon created a *de facto* government and maintained it for four years. The North was naturally alarmed lest any European Power should recognize them; as, indeed, Louis Napoleon, then ruling in France, would have liked to do. Seward, who was then Secretary of State, accordingly took up ground which swung back towards the older view that a new Government must have a good legal title as well as actual power, and dwelt on the fact that the Confederates were insurgents against an established constitutional authority. After the Civil War was over, this doctrine tended to influence the action of the United States in the cases which thereafter came before the State Department, most of which arose in Latin-American countries. Thus the language and the action of American statesmen have, during the last half-century, wavered between two views. One is that any *de facto* government is to be recognized; the other is that such a government ought also to be able to point to some legally expressed approval given to it by its own people; that is to say, must show itself to have legitimacy according to our modern ideas of what constitutes that quality. President Wilson would seem to have taken the latter view in the recent case of Huerta, President Roosevelt the former in the case of the rapid recognition of the Republic of Panama, a case on which Dr. Goebel makes some comments, though he treats both it and the Mexican instance with proper reserve. Arguments may be adduced for both views, and the facts vary so much in different cases that it is hard to lay down any principle as universally applicable, so that the inconsistencies discernible in the policy American statesmen have followed are not only excusable, but to some extent unavoidable.

Though the treatise suffers from the too frequent use of cumbrous and rather obscure pseudo-technical terms, is not altogether free from inaccuracies in matters of fact, and has more than a fair proportion of typographical errors, its historical chapters are useful. The comments are sensible, the selections from speeches and public documents are well chosen, and a spirit of fairness is visible throughout. We should, however, have desired a somewhat fuller and more exact examination of the principles which ought to be adopted in future in the presence of conditions which are only too common in the case of the minor Central and South American states. Assuming the safe rule, that in general the government *de facto* should be recognized, it becomes important to find some sort of criterion of what is a *de facto* government. No two cases are quite alike, yet certain criteria may in a given case make it easier for other governments to concur in simultaneous action. This is a consideration of no small weight, as the case of Mexico shows to-day.

PHILEROTICISM.

Goethe's Life-Poem: As Set Forth in His Life and Works. By Denton J. Snider. St. Louis: Sigma Publishing Co. $1.50.

The need of a philosophic appreciation of Goethe's significance in the world of letters is self-evident. Nearly a century has elapsed since his death, a full century since the cessation of his most active productivity; one should be able accordingly to view him dispassionately and in the proper perspective. Equally evident, alas, is the failure of the present work to meet the most moderate demands of even the general reader. The book, in fact, so far from being in any sense philosophic, reads as if it were made up of preachments delivered to a bluestocking coterie. For example:

> So the lighthearted woman [Goethe's mother] has also her battle with the fiend, whom she gets rid of then and there, whenever she meets him, by a miraculous act of deglutition. In this way she, too, may be said to have had her Philosophy of Negation, whereby she could negate the negative, dealing with it far more simply but more effectually than her son, who probably never did quite succeed in swallowing his Mephistopheles, "the Spirit that denies." Well, who does? For it is a characteristic of old Splayfoot that he will turn up again after repeated human engulfments—may he be accursed! (Pp. 30-31.)

Mr. Snider's faults may be summed up in two general categories. First, there is his own marvellous style. From the philosopher one has the right to expect moderation in language, equableness of tone, mental poise.

Whereas in Mr. Snider everything is superheated. Each turn in Goethe's life is "pivotal" (the word is an obsession); each shift in Goethe's activity is "epochal"; each happy or unhappy manifestation of talent is "volcanic" or "Titanic." To such rhetorical exaggeration is joined an immoderate straining of language; for example, the frequent use of "forefeel" in the sense of *ahnen*, of "mediate from" in the sense of "rescue, redeem"; of such far-fetched terms as "diremption," "axial," "wrappage," "fameless," p. 269, to designate conduct which avoids gossip. In general, the reader gains the impression that the writer, instead of being acute or brilliant, is only bizarre.

Secondly, Mr. Snider's attitude towards his subject is fundamentally, organically wrong, not to say vicious. Borrowing from Goethe's "Pandora" the name Phileros, Lover of Love, he proceeds to treat Goethe pretty much from cradle to grave as a lovesick swain; Germany's greatest imaginative thinker has apparently little better to do than off with the old and on with the new. Against this direful misconception every real student, whether hyphenated or not, will protest in the most energetic terms compatible with etiquette; the misconception is, in brief, an outrage. The very title of the book is misleading: there is no such thing as a Goethe Life-Poem. Goethe has enriched the world with much of its best poetry, his life was very long and unusually diversified in spiritual content; but that life is not a poem, least of all a love-poem, rather is it a problem to be studied with all the insight at our command. In the words of Clärchen's song, his life was

> Freudvoll und leidvoll,
> Gedankenvoll sein.

Yes, ever *gedankenvoll*, whether we render the word as "full of thoughts" or as "serious." Let us add Goethe's self-characterization: A man who has taken life hard, *Einer der sich das Leben hat sauer werden lassen.*

Much of our author's aberration is due to his misapprehension of Goethe's so-called autobiography. We note a similar blunder in Mrs. Burr's book, "The Autobiography," an otherwise admirable discussion of autobiographical writing from Augustine down. When Goethe, at the age of fifty-nine, began the writing of his "Wahrheit und Dichtung," two facts must have been clear to his mind: the one, that his life after settling in Weimar was already adequately known; the other, that round his earlier life had grown up a whole literature of fable. "Wahrheit und Dichtung," then, is an attempt to dispel the fable and present the truth, to portray the circumstances amid which he grew to manhood and the influences which moulded his character and gave direction to his genius. The full title of the work is significant: "Aus meinem Leben, Wahrheit und Dichtung." In other words, I, Goethe, am going to tell enough of the truth to make my start in poetry intelligible. This he has done; more than this he has not attempted. Hence the work ends abruptly on the eve of his departure for Weimar. To criticise the work as an autobiography, as Mrs. Burr has done, and condemn it for not conforming to the general aims and principles of autobiographical writing, is to condemn the author for not doing what he never intended doing. To infer that Goethe was ignorant of autobiographical method is to forget that he translated Benvenuto Cellini and wrote for the "Meister" the "Confessions of a Beautiful Soul," the most delicate and subtle analysis of character-growth ever penned. On the other hand, to render the title by "Truth and Fiction (or Poetry)," still worse by "Fact and Symbol," and to suggest, as Mr. Snider suggests, page 517, that "the deepest impulse which drove him to seize his pen" was "to record his early loves, varying from Gretchen to Lili," is to overstep the bounds of good sense. If we strike out of "Wahrheit und Dichtung" *everything* bearing upon Gretchen (of Frankfort), Kätchen Schönkopf, Friederike, Charlotte Buff, Lili, we leave pretty much intact a portly volume of many hundred pages, treating of society in general, politics, war (somewhat), medicine, jurisprudence, and, above all, the philosophical and literary strivings of Germany about the middle of the eighteenth century. In brief, the work is a picture of Germany as Goethe saw it with the eyes of boy and young man. Especially fascinating is the *atmosphere* in which these forgotten or half-forgotten worthies move and have their being. We move with the panorama, we learn indeed to know the Holy Roman Empire of Germany *in articulo mortis*. No other literature can boast of so priceless a document. It is anything but "Symbol," it is the solid truth of history, but history interfused and interpreted by a grand poetic genius. To treat the work as a lover's chronicle is to reduce Goethe to the level of Rousseau or Casanova, or even the Chevalier Faublas!

In the matter of Friederike of Sesenheim, Mr. Snider is apparently unaware of the Lenz scandal. The soundest opinion of the Sesenheim episode in "Wahrheit und Dichtung" treats it as a deliberate attempt on Goethe's's part to rehabilitate Friederike, and in rehabilitating her he wittingly lowered himself. In like manner, Mr. Snider overlooks the recent theory that Dorothea borrowed some of her features from Lili.

The treatment of Goethe's "Reynard" is contrary to modern scholarship. At page 382 we read:

> "Reynard the Fox" originally sprang out of a vast protoplasmic ["protoplasm," "protoplasmic" haunt our author] reservoir of popular fable which showed the animal world playing the part of men in the various relations of life. This fable had especially evolved in Germany and belonged peculiarly to her people, starting far back in the primeval forest and unfolding through the medieval into the modern world.

Grimm's theory of a *Tiersage*, we comment, has been discarded these many years. So far from originating in the primeval forests of primeval Germany, the stories of Fox and Wolf are offspring of the mediæval cloister. They are emphatically a branch of clerico-monkish erudition, influenced by the Arabic Kalilah-Dimnah collection, by the Alexandrian Physiologus and the Æsopian Fables. The stories of Fox and Wolf, first composed in Latin, then in French, were translated into Flemish and thence into Low German. Goethe's "Reynard" is based upon Gottsched's edition, 1752, of the Lübeck Low German version of 1498.

Equally wrong are the remarks upon metre (p. 383). That the German *Knittelvers* should be translated "doggerel," may perhaps pass; but that "Faust" is written in doggerel, we flatly deny. That great poem exhibits nearly every conceivable form of metre except doggerel, apart from a few brief scattered passages. We deny also that Chaucer employed doggerel, or Scott in his Romances, or Whittier in his "Snow Bound." Clearly, our author, not having taken the first step in the history of metrical forms, confuses "doggerel" with the octosyllabic rhyming couplet.

At page 40 Mr. Snider calls Goethe's boyish poem, "Christ's Descent to Hell," "daring." How so? All through the Middle Ages the apocryphal "Evangelium Nicodemi" and its supplement, the "Descensus ad Inferos," were a favorite literary theme, passing from Latin into early French, English, German, and other languages. An echo of it seems to survive even in the modern children's rhyme: "Open the gates as high as the sky, Let King George and his army pass by," Saint George being substituted for the sacred name of Christ. Goethe was not more daring than many a pious cleric of medlæval Germany, and the sole question for us is to determine which especial German version he followed in his fragment.

Our criticisms are not hypercritical, but merely seek to enforce the doctrine that Goethe cannot be dealt with on *a priori* methods, and is to be interpreted only with the aid of the soundest and broadest scholarship.

We have not the patience to combat, one by one, Mr. Snider's views upon Goethe's relations to women, whether the woman in question be named Friederike, or Lili, or Frau von Stein, or Marianne, or Ulrike. Whoever begins by creating a Phileros is bound to go astray. Peculiarly exasperating is the treatment of Goethe's connection with Christiane Vulpius and their family life. The quiet Weimar household, almost humdrum in its daily routine, is turned into a house of Tantalus, Goethe the indefatigable student and writer is hounded by the Fates and Furies and all the other pack of classic hobgoblins. Such perversity is fatal to genuine study. The initiated can perhaps afford to smile; but what of the uninitiated, those who have heard something of German literature and sincerely wish to know more? We can only bid them wait in patience until some one shall arise with enough intellectual virility to exorcise all this erotic feminism and depict the veritable man and thinker.

The book is without index; even the table of contents is inadequate. We have noted many grievous misspellings which are part and parcel of the general carelessness. Thus: persistance, p. 6.; inuendo, 56; uproarous, 73; Alsations, 96; Calvanism, 176; issolation, 286; apreciates, 342; exhiliration, 378; humerous, 385. This last reminds us of the famous German hyphenization in which *Schul-terminologie* was set up *Schulter-minologie!* Is proofreading in way of becoming a lost art?

A TEXTBOOK OF FINANCE.

Money and Banking. By John Thom Holdsworth. New York: D. Appleton & Co. $2 net.

Professor Holdsworth has few equals as a *précis* writer. He condenses and epitomizes without eviscerating. His aim has been to make a serviceable textbook, but the work before us is much more than that: it is a running critique of the principles of American banking and currency, showing rare fidelity to facts, shrewd sense of values, perspicacity of judgment, and pithy phraseology. Take, for example, his passage on Prof. Irving Fisher's "compensated dollar." He outlines Fisher's scheme with astonishing brevity and clearness, recites the arguments pro and con, and gives his own opinion in the following words:

In the first place, this scheme, being based upon the use of the multiple or tabular standard, is open to all the objections against such a method of correcting price fluctuations. Moreover, it is based upon the quantity theory of money in some form, but authorities are not agreed upon the soundness of that theory. Secondly, there does not seem to be much hope of an early international adoption of the plan, and its adoption by the United States alone would play havoc with our foreign trade and make the operations of foreign exchange uncertain and highly speculative. Thirdly, the plan is defective in that it cannot be applied to stop falling prices. Professor Fisher proposes to meet this possibility either by reducing the weight of the coined dollar or by withdrawing all gold coin and substituting gold certificates. It is probable, however, that the business world would look upon either expedient as a plan to debase the standard, and that it would meet with strong opposition Even granting that it is advisable to maintain a price average, the adoption of Professor Fisher's ingenious scheme as a practical plan seems remote. The illusion that gold is stable, produced by the fact that the price of gold is always the same, is deep-rooted in the business world. A long campaign of education will be needed before men will be willing to surrender that belief.

In such manner Professor Holdsworth glances at the whole field of money and banking, omitting no salient feature, wasting no time on immaterial considerations, sifting sense from nonsense, displaying throughout architectonic skill of a high order. His chapter on Foreign Banking Systems is really a quite remarkable feat in condensed description. What could be more succinct, and at the same time more informing, than this account of the Bank of England, covering one hundred and thirty-five years?

In 1709 it was granted a quasi-monopoly by a decree of Parliament that no other corporation or partnership of more than six persons should issue demand notes in England. As the issue of notes was regarded as the main business of banking, this provision was understood to prohibit any organization of more than six persons from engaging in banking, and for a number of years the Bank of England had a practical monopoly of the entire field of banking. It received public funds on deposit and acted as fiscal agent of the Government in placing loans, and to some extent in collecting the revenues. The charter of the bank was renewed from time to time, usually on condition of new loans to the Government or a reduction of interest on old loans. These loans for war purposes became so large that in 1797 the bank was compelled to suspend special payments and did not resume until 1821. A Parliamentary investigation into the financial situation in 1810 resulted in the famous Bullion Report, the establishing of the gold standard, and the present coinage system in 1816, and the gradual restoration of financial order. In 1826 the monopoly of the bank was relaxed and joint stock companies were allowed to do business, including the issue of notes, beyond a radius of sixty-five miles from London, and after 1833 they were authorized in London and vicinity, but without the note-issuing privilege. Upon the renewal of the bank's charter, in 1833, its notes were made legal tender everywhere in England and Wales, except at the bank itself, so long as redeemable in gold on demand. During this period joint stock banks multiplied rapidly and the amount of note issues was greatly increased. The commercial crises of 1836 and 1839 were attributed to the over-issue of bank paper, and led to a movement for banking reform which culminated in Peel's act of 1844.

The possession of this faculty of condensation enables Professor Holdsworth to present the minutiæ of banking administration as instructively as he presents the great economic principles which underlie banking and currency systems. He tells, for example, how a paying teller each day examines checks that come through the Clearing House, and how he marks them in case of insufficient funds; indeed, our author is so specific that he suggests a better way to mark them.

Such is the uniform ability displayed throughout this work that one part appears to be as skilfully handled as another. Of course, at a time like this, the chapter on Domestic and Foreign Exchange, if well written, should be of peculiar interest; and it is very well written, indeed, reminding us by its spirit—as, indeed, the whole book does—of that ingratiating English authority on similar subjects, Mr. Hartley Withers. The most difficult and confusing problem of finance is here robbed of its terrors. What may be called the normal operations of exchange are easily enough understood; the operations aside from normal—the modifying factors—are what make the subject so inexplicable to the ordinary mind. Professor Holdsworth presents these so simply, so concretely, so deftly, that the problem immediately becomes stimulating.

His description of the Federal Reserve System is the clearest we have yet seen. This whole chapter should be read in connection with the one on foreign banking. Together, they create for us an atmosphere in which best to scrutinize such great subjects as acceptances, discounts, and currency issues. Far from being a mere textbook, the work before us is one of great value, as it marshals for us not only the fundamental principles of money and banking, but also the world-wide efforts of the past to give those principles their most successful application.

Notes

"The Operation of the Initiative, Referendum, and Recall in Oregon," by James D Barnett, is announced for publication this week by the Macmillan Co.

The Century Co. announces the forthcoming publication of "The Most Interesting American," a study of ex-President Roosevelt, by Julian Street.

Those who owe to the translations of D. G. Rossetti their knowledge and appreciation of the Italian poetry of the early Sicilian school will profit by Prof. Ernest Langley's scholarly edition of "The Poetry of Giacomo da Lentino" (Harvard University Press). To this verse Rossetti contributed something all his own, a mood of aspiring idealism which has the savor more of his own pre-Raphaelite England than of sensuous Italian chivalry of the thirteenth century. The prose summaries of Professor Langley have, along with no little elegance, the advantage of accuracy. In them he isolates the themes, and thus to an extent also the artistic motives of the various poems. In passing to them from the original Italian we do not lose everything, for, considered as art, the poetry of the Italian Duocento lacks precisely sufficient elaboration. Its dominant mood is the melancholy of a deluded yearning in love, tinged delicately with a humor inherent in the temporary nature of this delusion. The poets of Frederick's court never clearly decided whether they were weeping or laughing. In this lies their naïve charm, a charm only intensified by their labored preciosity and by the benign complacency of their gallantry.

"The Nearing Case," by Prof. Lightner Witmer (B. W. Huebsch; 50 cents net), described as "a brief of facts and opinions," comprises a number of discussions by Professor Witmer himself, together with a considerable collection of newspaper articles, letters, and extracts from various sources, all relating to the now famous dismissal of Prof. Scott Nearing by the trustees of the University of Pennsylvania, last June. As the whole matter is under investigation by the American Association of University Professors, it would hardly be proper to express a final opinion, in advance of the publication of the report of the Association, regarding the merits of the case as presented by Professor Nearing's colleague. The undisputed facts appear to be that Professor Nearing's work was sufficiently satis-

factory to warrant the trustees of the University in promoting him, in June, 1914, to an assistant professorship; that he was dropped in June, 1915, under a rule of the trustees regarding annual appointments, without explanation of the reason for his dismissal, and that the trustees and provost have thus far refused to make public the grounds of their action. From the mass of allegation and suspicion which the summary action of the trustees has aroused emerge such varied intimations as that Professor Nearing's utterances, in the lecture-room and in public, were indiscreet, and brought the University into disrepute; that some of the alumni were opposed to him; that his active opposition to child labor earned him the enmity of politicians and employers; that he was a sacrifice to the secret demands of local public service corporations and influential friends of the University, and that his views regarding religion and morals were objectionable. Professor Witmer's own contributions to the volume before us are a detailed and emphatic denial of all charges, and a bold arraignment of the trustees and certain of the alumni for their course in the matter. It is greatly to be hoped, alike for Professor Nearing, the University, and the public, that a full and impartial statement of the case may soon be made; for if there is no other side than that which Professor Witmer sets forth, there can be, we think, only one verdict.

Those who elect that their criticism shall be literary in manner and spirit as well as in subject-matter will relish the appreciations of Mr. Eugene Mason in "A Book of Preferences in Literature" (Dutton; $1.25 net). He is no dilettante reading his own temperament into a few authors of narrow range. His preferences, on the contrary, happen to be those of a connoisseur in French and Spanish as well as in English. He rejoices with almost equal susceptibility in an excellence or an appeal in Wace's "Roman de Brut" and in the modern mystic, W. B. Yeats. He delights to roll under his tongue the prose of M. Anatole France, and smacks his lips over some of the short stories of Rudyard Kipling. He lingers fondly over the verse of José-Maria de Heredia as "probably the most accomplished artist of his time," and cons again and again the songs of Francis Thompson—"poetry which in its rarer moments rises to heights the most exalted of its day." He is thus various, not because he is a theorist, finding exact confirmation of his own doctrines in productions little understanded of the people, but because these several artists express some vision of beauty in the environing cosmos. He does not measure them with a rule to determine whether they rise to some classical standard. He does not sort their work into types as one may let oranges drop through different-sized holes for packing in a box. Indeed, he avows, "For my part creeds are peculiar to theology, and I am not anxious to impose them elsewhere."

On the other hand, he is no sentimentalist apotheosizing the idols of his fancy. He does, to be sure, manifest without reserve the feeling inspired by what he reads. A typical passage may be taken from his account of Thompson: "'Sister Songs,' for example, dedicated to two innocent girls, happy as spring flowers, suddenly tells, with piercing poignancy, the story of that other flower, fallen from spring's coronal and blown withering through the city streets. It records how this brave, sad, and loving girl gave of her scanty pittance to him, a stranger, that he might eat; then fled, a trackless fugitive. The emotion of the wonderful passage is heightened to an almost unbearable degree by the dramatic contrast of the delicately nurtured child, to whom the verses are spoken, with the girl whose innocency only God can give again, when He restores the years that the locusts have eaten." But this surrendering to impressions does not blind him to larger bearings. Of Thompson himself he says: "It would seem unlikely that Thompson is destined to permanent popularity. . . . His creed is anathema to a large section of the public not concerned with spiritual matters, and to a larger portion that is. . . . Such fame as he has won was derivative in the first instance from the rumors of his lamentable legend. Gossip attracted the attention of the marketplace to songs which otherwise would have fallen on deaf ears." In other essays he contrasts Christina Rossetti and Paul Verlaine as Christian poets, and dwells on M. Anatole France's absorption in the Dreyfus affair, and makes explicit the bitter philosophy beneath the exquisite art of Guy de Maupassant. Besides, he is not only a discriminating critic, but, as the quotations show, he has a style. The moments of eloquence are followed by glints of humor, of sly innuendo, or colloquial waywardness. Probably the distinctive feature is the inweaving of Scriptural phrase and allusion, which lends a haunting grace to the various individual and faintly melancholy cadences in these adventures of a discerning lover of literature.

Frederick Palmer's "My Year of the Great War" (Dodd, Mead; $1.50 net) is by all means the cheeriest book that has come from the trenches. Mr. Palmer has made himself the spokesman of the admirable spirit and imperturbability of the British soldier. Incidentally he gives technical information in abundance, for he is not only the most experienced correspondent in the field, but also the most favored, being sole accredited American correspondent in the British army. He was even taken to a remote and undesignated northern harbor where he saw the entire English fleet passing out in practice formation. A thrill comes even through the necessary reticence of the description. Mr. Palmer made a rapid trip through Germany and Belgium, but his main association was with the British forces. For them he conceived the liveliest admiration and affection, and he is easily their best chronicler. While the student will readily pick out the details of trench tactics, staff, and supply, the average reader will most value, and properly, the very personal tone of the narrative. Such masterpieces of dry humor as the non-com. grenadier discoursing on the qualities and limitations of hand-thrown bombs are what really distinguish the book. Mr. Palmer's survey will be encouraging to those who have doubted England's ability to shoulder, as soon she must, the greater part of the burden of the war in the west. He writes:

> If the war shows anything it is that basically English character has not changed. She still has unconquerable, dogged persistence, and her defects for this kind of war are not among the least admirable of her traits to those who desire to live their own lives in their own way, as the English-speaking people have done for five hundred years. . . .
>
> It is still the law that when a company of infantry marches through London it must be escorted by a policeman. This means a good deal: that civil power is superior to military power. It is a symbol of what Englishmen have fought for with spades and pitchforks and what we have fought England for. My own idea is that England is fighting for it in this struggle; and starting unready against a foe which was ready, as the free peoples always have, she was fighting for time and experience before she could strike her sturdiest blows.

The analysis of the collective soul of a nation, difficult enough in ordinary times, is infinitely more so when half the world is in arms and national passions run high. But the number of books during the past year on the Soul of Germany, the Spirit of France, and *l'Ame Belge,* shows that the difficulties have no terrors for fluent authors. Distinctly above the average of this kind of socio-psychological *tour de force* is "The Spirit of the Allied Nations" (Macmillan), a series of lectures given last winter at King's College under the Imperial Studies Committee, and edited with an introduction by Sidney Low. Underneath all the lectures lies Renan's conception of nationality: that a nation is not alone a matter of race or religion or language; but "a soul and a spiritual principle, the resultant of a long historic past, of sacrifices and efforts made in common, and of a united will and aspiration in the present." Otherwise the lectures vary much in value and method of laying bare the national soul. Prof. Paul Studer, of Oxford, handles deftly the familiar subject of the intellectual and artistic side of French nature, maintaining that here at least the influence of France on the modern world has been unrivalled; even Germany has received constant inspiration from French letters through many centuries. Professor Hamelius, one of the notable band of Belgian scholars driven into enforced exile, points out as the distinctive feature of his native land Belgium's position between the Latin and Teutonic worlds, a link between them if also a barrier, a chemical compound of the two elements from which a new substance has been evolved. Flemish and French are mixed with Walloon and a little German; Latin vivacity with Dutch caution and shrewdness; the emotional faith of the South with the practical outlook upon life of the North; mysticism with frank materialism, as seen characteristically in the most typical Belgian Rubens, the painter both of the Antwerp Crucifixion and of the drunken Silenus.

The spirit of the Russian masses, the peasantry and the working classes, is sympathetically studied by M. Aladin, a former member of the Duma. He shows how completely the Russian masses have been misunderstood by Germany, who, with all her systematic grasp of facts and things, does most commonly misunderstand the emotions and ideas of other peoples. She mistook the temper of Russia as she did that of Britain and Ireland and South Africa. She believed she saw Russia on the verge of another paralyzing social upheaval such as inaugurated the Duma a decade ago; she failed to discern the passionate sense of racial and religious unity which is the soul of Russia. Mr. Seton-Watson's account of Servia is one unbroken paean of admiration; his panegyric of Servian military power, which has expelled all enemies from Servian soil and "so completely beaten and demoralized the Austrian army" as to make it "useless for any further offensive," is less felicitous in December than when it was written in January. Most charming and fresh, with the very atmosphere of the cherry blossoms, is Prof. J. H. Longford's description of

the spirit of Old Japan—its scenery, customs, religions, and institutions, interpreted by the author's interesting parallels between the British island empire in the West and the Japanese Empire in the East. When he went to Japan some forty years ago it was still the land of romance and feudalism. Silk-clad and sword-girt samurai still paced the streets with solemn dignity. Great feudal lords passed in gorgeous palanquins of lacquer inlaid with gold, while passing commoners bowed their heads to the ground in humble reverence. But we question whether under the spell of Nippon's charm and the life of Old Japan Professor Longford quite grasps the New Japan—the materialism following the transformation of the industrial revolution and the ambitions aroused by three successful wars against China, Russia, and Germany. We doubt whether it is quite true that "the spirit of the people is unchanged." Great Britain's peculiar distinction, according to the able concluding chapter by Sidney Low, is the way she has shown to the world, in Canada, Australia, South Africa, and elsewhere beyond the seas, how Liberty and Empire may be reconciled, how the Will to Live may work in harmony with the Will to Power, how in the fulness of time the world may contain not one but several great federated empires besides the British.

Prof. K. Emil Hilgard, of Zurich, is the author of an excellent brochure entitled "Ueber Geschichte und Bau des Panama-Kanales" (Zurich: Orell Füssli). In comparatively brief compass it gives a comprehensive survey of the history of the canal, its leading engineering features, the geographical conditions, etc. Professor Hilgard writes with all enthusiasm about the achievements of Gens. Goethals and Gorgas, which he thinks epoch-making and a great American contribution to civilization. In the main, however, he confines himself to a recitation of the facts and lets them tell their story. But as a sympathizer with Germany in the present war he cannot refrain from contrasting the sanitation of the Canal Zone with what he considers the wrongful supplying of munitions to the Allies, because of which he attributes to America a large responsibility for the growing death-rate and misery in Europe. Professor Hilgard's pamphlet is excellently illustrated by photographic views and tabular presentations of the engineering results achieved, several of which are original with the author.

A tendency in recent years, on the part of teachers of economics, to rely less upon textbooks as a means of instruction, and to supplement or even to supplant the usual manuals by collections of material gathered from diverse sources, has been most marked in the middle West. "Current Economic Problems, a Series of Readings in the Control of Industrial Development," edited by Walton Hale Hamilton (The University of Chicago Press; $2.75 net), which grew up in the process of instruction at the Universities of Michigan and of Chicago, has had the benefit of the experience and advice of teachers, notably Professor Taylor of Ann Arbor, who have done much to bring the new method into favor; it has been tested in the class room in two separate editions before this final revision was published; it appears now as an excellent representative of its class. The book differs from others in the field, in that it does not aim to cover the whole body of economic principles, but concentrates its material to illustrate problems in the control of industrial development. Two chapters discuss the historical sources and general character of the present industrial system, others take up the pecuniary basis of its organization, the problem of population, and the questions of political theory underlying regulation by the State; most of the chapters, of which there are fourteen in all, cover more specific topics, such as crises, international trade, railways, trusts, trade unionism, and various aspects of the movement for social reform.

The editor has garnered from a wide field, and is quite regardless of the authority from which he quotes, whether it be the Bible, the Supreme Court, Mr. Dooley, or the ill-fated author of "Hallelujah, I'm a Bum." He says frankly that his object is to raise questions rather than to answer them. In general, however, the extracts are sober and substantial. If the point of some of them is not very clear, these may be omitted, and there will still remain in the volume, which comprises nearly eight hundred closely printed pages, enough material to engage the attention of a thoughtful student for a good part of a year. The new plan of teaching economics, which this book is designed to serve, is still on trial. Apparent as are some of its advantages, it entails practical difficulties in administration, and a serious danger of slipshod habits of thought as its result. Its standing in the academic world has been hurt by such extravagant claims as that which would appropriate for it the title of "the Inductive method." The best argument for the extension of the new plan is furnished by actual instruments of instruction like that which the editor of this collection has supplied.

Lively anticipations are raised by a preliminary glance at Ierne L. Plunket's attractively printed and illustrated "Isabel of Castile" (Putnam; $2.50 net), but more careful perusal reveals little to justify them. The story of Spain's greatest queen was told far more accurately and interestingly by Prescott, three-quarters of a century ago. A good deal of fresh material has become available since "Ferdinand and Isabella" was first published, and the list of "principal authorities" on which the present work is based indicates that its author is familiar with some of them; but she seems utterly unable to estimate their respective positions and values, and use them accordingly. The result is a strange jumble. The account of Castile in the fifteenth century with which the book opens is a tangle of inaccuracies; one does not need to read more than a few pages to be certain that the author has nowhere delved beneath the topmost surface. The style of the book may better be imagined than described. The following quotation from page 18 will suffice: "An occasion of outward or obvious importance, when a succession or a Council of Regency were under dispute, or if an oath of homage to a new sovereign or the confirmation of some unprecedented act were required; all three 'estates' would meet together at whatever town the king happened to be staying." It seems inevitable that most of the attractive queens and princesses of mediæval and modern Europe should be "done over" in biographies of this style in these degenerate days; but the authors of such books should have enough discretion to avoid choosing subjects which have already been treated in classic works, and in words which will endure for all time.

In order to arrive at the heart of Baron De Kusel's irrelevant and lengthy Egyptian recollections, the reader would do well to plunge into the middle of his 350 closely written pages. What precedes is a leisurely recital of events and impressions, more or less trivial and personal. Under other and more skilful hands the observations contained in this prelude, covering a period from 1863 down to the rebellion of Arabi Pasha and the bombardment of Alexandria, might have been made of engrossing interest, but the complacent author of "An Englishman's Recollections of Egypt" (Lane; $3 net) was unfortunately not so gifted. Thus an excellent opportunity for a first-hand history of the pre-British period in Egyptian affairs, of the days of the oppressed fellahin and the kourbash, will be lost unless an enterprising publisher scientifically lays siege to Baron De Kusel's valuable store of experiences. For the author certainly possesses a wealth of such material, having been intimately associated with Egyptian affairs, sharing native and official confidence to a privileged degree, prior to the inception of the new régime under the British. As a customs official the author was thrown into close contact with native officials, and had a view of their politics in Cairo that has rarely been offered to another European. He was familiar with Arabi, Zobeir, and the other leading lights of pashadom. Later, he was more or less officially associated with the British protagonists like Gordon, Lords Cromer and Kitchener, and the various generals that had previously essayed the reclamation and extension of Egyptian borders. But all these personalities, excepting, possibly, Zobeir Pasha, come and go through his pages like silhouettes.

On Gordon, whom he knew, Baron De Kusel throws a new and interesting sidelight in the much-discussed relation with Zobeir Pasha. The author was a close friend of Zobeir, and shares the opinion now current that the neglect of Gordon's urgent requests for Zobeir as a colleague in the reconquest of the Sudan, once held in sway by the latter in his unregenerate, slave-dealing days, largely contributed to the misunderstandings that ended in the tragedy at Khartum. Vivid, for once, are the impressions of the few days of Arabi's power, and of the consequent bombardment of Alexandria. But the bombardment is more a spectacle than an historic episode, and the brief reign of Arabi Pasha, or the events that followed, are never seen in their true political perspective. After the bombardment, the author tells us, it was the American marines that first landed to restore order in the city, the British not landing until twenty-four hours later. Thus, as on a film, the author passes in leisurely review the opening of the Suez Canal, the maelstrom of Egyptian politics, the various personalities that helped make recent Egyptian history. Except for the sketch of the relations of Gordon and Zobeir Pasha, his record is interspersed with quotations from standard authorities, and largely made up of ingenuous after-thoughts and arid impressions of Egyptian habits, customs, and art. Through these pages of personal gossip, sport, and similar conviviality the reader will look in vain for the rewarding in-

sight or observation that so long and close an association presented to the author.

The experiences of the student who worked his way through his four years' course at Princeton, as related by himself and recorded by Christian Gauss under the title "Through College on Nothing a Year" (Scribner; $1 net) round out a tale which deserves the too much abused word "human document." Owning for his background "a somewhat disreputable Jersey suburb of New York, famous for its goats and slums," he belonged to that minority for whom a college education results in an actual and downright break in station of life. If college was an unknown world, he was on the other hand accustomed to working for small pay, to shifting for himself, to asking for what he wanted. Utterly unprepared for the collegiate experience, he was much at home with the other half of his problem. A more exceptional part of his performance fell in his years as an upper classman, when he found scope for a special aptitude in business. As a freshman he made five dollars selling football programmes; as a senior he organized the selling of forty subordinates, managed a pressing establishment, promoted a successful distributing agency, speculated to advantage in sophomore "stickers," in short, marketed ideas instead of selling time. The Self Help Bureau, the College Farm, and other agencies for assisting the self-supporting student were of use to him, and the record of his experience should be as valuable as it is inspiriting. None the less, the fact is to be kept in view that, despite his handicaps and burdens, his native endowment, sharpened though it was by necessity, topped the average. To expect every student facing the same problem to give as good an account of himself would not promote the solution of the university's problem in encouraging the poor sub-freshman to dare its doors.

We have received from Ginn & Company the first nine volumes of their New Hudson Shakespeare series (30 cents each): "As You Like It," "Hamlet," "Julius Cæsar," "King Lear," "Macbeth," "The Merchant of Venice," "A Midsummer Night's Dream," "The Tempest," and "Twelfth Night." This is a convenient edition of the plays, intended primarily for use in schools, well printed on paper of good quality. The volumes are thin and slip easily into the pocket. Introduction and explanatory footnotes are furnished by Prof. Henry Norman Hudson, and the edition is edited and revised by Ebenezer Charlton Black and Andrew Jackson George. The short introductions give in a concise form the information desirable for an intelligent reading of the plays, under such headings as Sources, Date of Composition, Editions, Dramatic Structure, Versification and Diction, General Characteristics, Characters. A useful feature of the volume is a chronological chart giving dates of the principal events in Shakespeare's life and relating these to British and foreign literature and to important historical events of the period.

Books on "mental science" deserve respectful consideration in proportion to their scientific accuracy, but the importation of Bible passages into the argument by means of forced interpretation and fanciful conceptions deserves severe condemnation. Such a method of argumentation characterizes "Bible Mystery and Bible Meaning," by T. Troward (McBride, Nast; $1.50 net).

Drama

NEW PRODUCTIONS IN LONDON—MR. VACHELL AS PLAYWRIGHT—AN ENTERTAINMENT BY LOUIS PARKER.

By WILLIAM ARCHER.

London, November 8.

Since the production of "Quinneys'," Mr. Horace Annesley Vachell has decidedly taken rank among the playwrights who count. On the other hand, his new play, "The Case of Lady Camber," is one that does not count—that is neither here nor there. It provides Mr. H. B. Irving with a congenial part, and it occupies a couple of hours agreeably enough; but its technical interest is slight and its intellectual qualities nil.

Harley Napier, F.R.C.S., is the owner of a fashionable nursing-home in the West End of London. He is an enthusiastic man of science, and has discovered a new poison, which is colorless, tasteless, and leaves no traces behind it. He has also discovered a jewel among nurses, Miss Esther Yorke, who is silently devoted to him, and whose love he in reality returns, though he has been too busy to notice the fact. The even tenor of life in this idyllic nursing-home is rudely interrupted by "the case of Lady Camber." That peeress was in bygone days a star of musical comedy, noted (mark this!) for her talent as a mimic. Her marriage with Lord Camber has proved a ghastly mistake, and she has fallen into wretched health. Her one chance of life lies in the skill of Harley Napier, seconded by the almost miraculous ministrations of Nurse Yorke.

But Nurse Yorke is exceedingly unwilling to undertake the case, for reasons which she cannot explain to Dr. Napier. The fact is that, some years before, she was found by Lord Camber (then a bachelor) in the depths of poverty and very ill. He took her to his flat, where she remained for a fortnight, in all innocence and propriety, but, alas! without a chaperon. So soon as she recovered her health, she fled from this equivocal position, and Lord Camber sought for her in vain. It was in disgust at this disappointment that he married his Gaiety Girl. Having now discovered the long-lost fugitive in the character of Dr. Napier's pet nurse, his Lordship manifests a desire to renew their relation at the point where she broke it off; so that it is only on Dr. Napier's urgent insistence that she consents to undertake the case of Lady Camber.

Six weeks pass, and Lady Camber is recovering. Unfortunately, she has as her personal attendant an exceedingly jealous old woman who hates Nurse Yorke, and, spying upon her, discovers that she receives letters from Lord Camber. This fact she discloses to Lady Camber, whom it throws into a frenzy. There is a telephone in Lady Camber's room (an unusual accessory, one would think, in a nursing-home), and to it the distracted woman rushes. She rings up Lord Camber, and, making use of her gift of mimicry, carries on a conversation with him in the voice of Nurse Yorke. The situation is a sufficiently ingenious and effective one, but it is rather clumsily handled. Among other compromising things, Lord Camber is made to say, "I love you even more than I did when you spent that fortnight at my flat"—an improbable speech for him to make at all, and doubly improbable over the telephone. Lady Camber, still impersonating Miss Yorke, tells her husband to come to the home immediately, and when he arrives there is, of course, a furious scene, which ends in her being carried fainting from the stage.

The former relation between Miss Yorke and Lord Camber is thus revealed to Dr. Napier, and the shock of the discovery awakens him to the nature of his feelings for Nurse Yorke. In a few hours Lady Camber dies; and what is Dr. Napier's horror, on going to his poison cupboard, to find that the phial containing his new and untraceable poison has been abstracted! As a matter of fact, Nurse Yorke has taken it with a view to suicide; but how is the doctor to know that she has not poisoned Lady Camber in order to step into her shoes? In the end, of course, he convinces himself of her innocence by setting traps into which, if guilty, she is likely to fall. The plot here becomes too complex for analysis, and too artificial to be really interesting. Such merit as the play possesses lies in the character of Lady Camber, which is drawn with a good deal of spirit. The jealous old dresser and maid is also well done. The doctor and the nurse are little better than ideal waxworks.

"Iris Intervenes" is the title of a three-act comedy by a new writer, Mr. John Hastings Turner, produced by Miss Lena Ashwell at the Kingsway Theatre. The press has been very kind to it, probably in view of the author's youth, and in the hope of better things to come. This leniency is an error on the right side, and I am the last to quarrel with it; but it must be confessed that, although the play shows a good deal of promise, its actual merit is scant enough. It tells a fantastic story of the irruption of a beautiful and imperious Russian damsel into an ultra-philistine suburban British household. The head of this household combines abject snobbery with extreme imbecility; and for that very reason (as we are told) he is selected by an American engineering firm for the guardianship of certain precious documents, of which a rival firm is anxious to obtain possession. No one, it is thought, will ever imagine that the papers would be entrusted to the keeping of so notorious an idiot. But the rival firm has somehow anticipated this astute move, an attempt is made to steal the papers, and the fair Muscovite and the little snob (who cordially disapproves of her) go careering over the country in a motor-car

on the track of the thief. The papers are duly recovered, though not by them, and the incident ends in a certain widening of the mental horizon of the suburban hero. There is a good deal of whimsical cleverness in the dialogue, which kept the audience amused; but a more aimless and preposterous story it would be hard to imagine. The author is apparently a very young disciple in the school of Mr. Shaw—an influence which he cannot make too great haste to throw off. What is imitable in Mr. Shaw's work is bad; what is good is inimitable.

Mr. Louis Parker, the author of "Disraeli" and "Pomander Walk" and the inventor of the historical pageants which had a brief vogue some years ago, has furnished Sir Herbert Tree's Theatre with an entertainment which has a very fair chance of popularity even in these troublous time. I call "Mavourneen" an entertainment rather than a play, for it is impossible to consider it seriously from the dramatic point of view. It is an adroit excuse for the exhibition of some picturesque scenery and costumes, and for the development of the engaging talent of Miss Lily Elsie. This lady was for several years the bright particular star of Daly's Theatre, under the management of the late George Edwardes. She was, if I mistake not, the original "Merry Widow." Then she married and left the stage for some years; but her admirers had by no means forgotten her, and it was a brilliant managerial inspiration of Sir Herbert Tree's to lure her back to the footlights. Henry Irving or Sarah Bernhardt had never a greater reception than was accorded to her at His Majesty's.

It must be owned that the raptures of the public, if a little excessive, were not quite unjustified; for Miss Elsie has real talent as a comic actress and played very agreeably the part which Mr. Parker had cut to her measure. Patricia O'Brien, alias "Mavourneen," is, of course, a wild Irish girl of overflowing humor, irrepressible spirit, undaunted courage, and unassailable virtue. In order to escape from a distasteful marriage which her father has arranged for her, she dons doublet and hose and sets off for London—the London of King Charles the Second. Riding into the first inn-yard she comes to, she there finds herself, by a happy accident, in the midst of a brilliant circle of courtiers—Arlington, Buckingham, Ashley, and I know not who besides. It only needed Clifford and Lauderdale to make up the whole "cabal." Then Samuel Pepys drops in with Mrs. Pepys; then the reigning favorite, Lady Castlemaine; and finally—of all people—Queen Catharine of Braganza! Patricia is dowered not only with the tongue of Beatrice, but with the sword of D'Artagnan; and she finds in this scene ample opportunity for the employment of both weapons. She renders a service to the Queen, and becomes one of her maids of honor; in which capacity she attracts the attention of the Merry Monarch himself. He makes her costly presents of dress and jewelry, which she accepts in all innocence, being far too simple minded to suspect any ulterior design. When at last she does perceive the drift of his Majesty's homage, she rebukes him with so much spirit and charm combined that, far from resenting his defeat, he bestows a knighthood on her chivalrous lover, makes her father confessor a dean, if not a bishop, and altogether conducts himself more like a fairy godmother than a baffled libertine. All this, of course, is terrible nonsense, but it scarcely pretends to be anything else; and it has little or none of the offensiveness of the "Nell Gwynne" plays, which were painfully popular some years ago.

An old-fashioned errant-husband farce, named "A Little Bit of Fluff," has been produced at the Criterion, by an author otherwise unknown to me, Mr. Walter W. Ellis. It is pretty sure, I imagine, to make its way to America; for it has the one great merit of its species—it is uproariously funny. Refinement it has none, and its ingenuity might better be termed impudence; yet, do what you will, you cannot choose but laugh at it.

"TREASURE ISLAND."

The small and picturesque Punch and Judy Theatre, under the management of Charles Hopkins, opened its season last week with a presentation of Stevenson's "Treasure Island," adapted for the stage by Jules Eckert Goodman. To the credit of this ambitious production three points stand out as noteworthy: the success with which the adaptation has preserved the spirit of the original; the high level of the individual performances, coördinated by admirable stage management; the really remarkable achievement of the producers in mounting so elaborate a production on the tiny stage of the theatre. In illustration of the last point, one scene in particular may be mentioned, that showing the quay at Bristol, with a real-looking ship at anchor and Long John's Inn to the right. A more enjoyable performance for the holiday season than is given by Mr. Hopkins's company can hardly be imagined, and if there is justice in the world the Punch and Judy Theatre should be filled to its limited capacity for many nights to come.

The first act, in the Admiral Benbow Inn, is dramatically the best, starting off with the ribald chorus, "Yo! ho! ho! and a bottle of rum," and maintaining throughout the melodramatic level set by that excellent ditty. The success of this act is mainly attributable to the capital performance of Bill Bones by Tim Murphy, which is conceived in the spirit of old-fashioned melodrama and executed with unfailing vigor. The Long John Silver—plausible villain—of Edward Emery is another excellent characterization, in which the two sides of the rascal's character are well brought out. Mr. Hopkins himself gives a well-considered study of Ben Gunn. The Jim Hawkins of Mrs. Hopkins is a performance marked by intelligence and ability, but Jim is an exceedingly masculine little fellow, and Mrs. Hopkins's charm is all feminine. Lack of space alone prevents us from paying tribute to other individual performances in this very delightful production. S. W.

SOTHERN AS LORD DUNDREARY.

Hearty thanks are due to Mr. E. H. Sothern for reviving at the Booth Theatre Tom Taylor's four-act comedy, "Our American Cousin," in which Mr. Sothern's father made a notable success some fifty years ago. In the present revival the elder Sothern's manner, as we are informed by venerable critics, is almost perfectly reproduced, but the spirit with which he animated the rôle is lacking. The latter part of this statement is not difficult to believe. Mr. E. H. Sothern's interpretation of the eccentric lord appears to be American to a degree. He has developed the sheer nonsense of the piece in a more finished way, to be sure, than could be expected of any vaudeville performer, but with a heartiness which even the lighter stage could not excel. The proof of his acting is the laughter of the audience, which is tumultuous. This he has succeeded in doing without wrenching the character from its setting. He has, indeed, by his spirited interpretation quickened the pace of what might easily have become a rather slow play; for it is trite to remark that as a whole Tom Taylor's masterpiece is not impressive.

With Mr. Sothern, to mention the outstanding members of the cast, are the following: Sydney Mather, as the American cousin; Lark Taylor, as the unscrupulous attorney, Richard Coyle; Orlando Daly, as the honest but besotted ex-tutor—an amusing relic of old-fashioned melodrama; Blanche Yurka, as Florence, and Emily Callaway, as Mary the milkmaid. F.

"THE WARE CASE."

As the structure of this importation from London was carefully analyzed in one of Mr. Archer's letters (*Nation*, October 28), we need not trouble our readers by repeating the details of a play which in any land would be thought amateurish. George Pleydell (Bancroft), the author, has contributed only another to the several plays of crime and detection which have been so much in vogue these past two or three years. Of course there is a trial scene—a not very effective one, by the way, and not wholly because audiences have had something too much of this sort of thing of late; the business and arguments leave the spectators bored before the scene is half finished. One act only, the last, that in which the wicked baronet, having been wrongly acquitted of murder, confesses his guilt to his long-suffering wife, possesses large possibilities. For the moment one forgets, owing mainly to the finished acting of Lou-Tellegen, that these are not real, consistent characters, and surrenders to the strong emotional appeal. But the spell is broken by any reflection upon what has gone before.

Credit is also due to Lou-Tellegen for the remarkable representation of controlled excitement which he gave while in the prisoner's dock. In the more usual moments of this baronet's life he seemed ill at ease, even while exhibiting a sort of acting which appeared extremely quiet and contained for a disciple, as he is, of the French school. Gladys Hanson made at times a lovely Lady Ware, but the part as a whole is not credible. Other members of the cast are Montagu Love, as the honorable lover of Lady Ware, and legal defender of Sir Hubert. He has been seen before to advantage on the New York stage.

John Halliday and Maude Hannaford made an attractive pair of lovers. The rich young brother-in-law of Lady Ware (played by Charles Derickson) is a wretched little jack-in-the-box, belonging loosely to a type that is not infrequent in English plays. Is it in life, or only on the stage, that young men feel privileged to hop upon a divan in a drawing-room with both feet, and wiggle about as though they had Saint-Vitus's dance? F.

Music

SURPRISING CHAMBER MUSIC.

Chamber music as performed by one, two, three, four, or more stringed instruments, with or without piano, is the most dignified branch of the art and the most intellectual, because, with so few instruments, there is not much opportunity for varied coloring or for sensational effects. The audiences, likewise, are the most dignified in behavior, and while a string quartet by Beethoven or Brahms, Schubert or Grieg, often arouses great enthusiasm, one seldom notes any other manifestation of emotion on the part of the listeners. An exception must be recorded at last week's concert of the Flonzaley Quartet, which played a piece that made the audience laugh and insist on its being played over again. Moreover, this piece lasted only one minute—a new thing in the realm of chamber music; it also established a record in being doubtless the most surprising, the ugliest, and the silliest composition ever placed before an audience at such a concert.

The short composition which made the Flonzaley audience laugh was one of "Three Pieces for Quartet" by the Russian futurist, Igor Stravinsky. It is intended, as Prof. Daniel Gregory Mason, of Columbia University, explained to the audience, to describe a desert and a wandering group of peasants with a bagpipe and a drum. The surprising sounds emitted suggested, however, an altercation among wild animals that make their home in the desert. Nor was there much more suggestion of the music of civilization in the other two pieces. One of these is supposed to picture a church in which plain chants are repeated from priests to choir; the other, a juggler laboring under some great sorrow but forced, nevertheless, to do his little tricks. Massenet, in his "Jongleur de Notre Dame," had a similar subject to this last one; he made it a masterpiece of melody, beautiful and touching. Stravinsky succeeded equally well in what was obviously his object—to make as great a variety of hideous noises as four instruments can perpetrate.

More "futurist" music was heard at a recital given last Sunday by Leo Ornstein, who chose the piano as a means of surprising and torturing his hearers. The most extravagant piece on his programme was his own "Wild Men's Dance." With such a subject a composer may claim considerable license in the way of tonal orgies, and Mr. Ornstein makes full use of it. To come back to Stravinsky, he also usually chooses subjects which are supposed to justify the frightfulness of his music, if music it can be called, for it has little in common with what has heretofore been known by that name. In his "Petrouchka," which is to be produced here this season by the Diaghileff Russian Ballet, there are scenes which resemble the subjects of the three pieces played by the Flonzaleys, and in which the cacophony is partly justified by apparently humorous intentions. One of these episodes is a caricature of a barrel-organ grinder; another, an unmistakable imitation of a street band, while a third represents a bear walking on his hind paws.

Turning to music properly speaking, we have to record two important piano recitals, both of them by artists of the British race—Katharine Goodson and Ernest Hutcheson. Miss Goodson, who, in private life, is Mrs. Hinton, the wife of one of the best and sanest English composers of the day, Arthur Hinton, has been known for years as "the English pianist with a Slavic temperament." Her programme was devoted entirely to Chopin, the whole atmosphere of whose art is as un-British as anything could be; yet she plays it as if she had been born at Warsaw, of Polish parentage; and from previous recitals it is known that she plays Liszt's rhapsodies as if her nurse had been a gypsy from the plains of Hungary. The other pianist referred to, Ernest Hutcheson, hails, like Percy Grainger, from Australia. He got the New York Symphony Orchestra to play with him, at one sitting, three concertos. As a rule, such a proceeding can hardly be commended, but Mr. Hutcheson is so good a pianist, and he had shown such excellent taste in the choice of his concertos, that it was easy to forgive him. The three works on his programme were MacDowell's D minor, which is looming up larger and larger every year, and now seems quite the equal of the other two works played on this occasion: Tchaikovsky's concerto in B flat minor and Liszt's in E flat. Percy Grainger was so impressed by Mr. Hutcheson's playing of MacDowell's splendid work that he promptly made up his mind to add it to his own repertory.

Nothing of special importance happened at the Metropolitan Opera House last week. Of orchestral concerts, the most important were those given in Carnegie Hall by the Boston Symphony Orchestra, with Fritz Kreisler as soloist. Dr. Muck is one of several prominent conductors who were pupils and friends of Anton Bruckner, and once in a while he ventures to place one of Bruckner's symphonies on a programme. The seventh was performed last Thursday, under his bâton, and most admirably; but, as always, the chief impression made was that this symphonist had little to say and took a long time to say it. Amends were made by the violin concertos of Beethoven and Viotti, played by Kreisler, whose cadenzas, or quasi-improvisations—while the orchestra is silent—on the themes of these concertos, and the way he plays them, would alone stamp him as the greatest of living violinists. HENRY T. FINCK.

Art

THE ETCHINGS OF CHILDE HASSAM.

Although one cannot imagine Childe Hassam seriously at a loss with any instrument of the graphic art, the point would seem his least congenial tool. Accordingly, the exhibition of some sixty etchings from his hand, at Keppel's, promised to be chiefly a new *tour de force*. This in many ways it is, largely because of the bewildering variety of the work. Hassam is putting the line through its paces, to excellent effect. Except for occasional infelicities of printing, especially of wiping and tone on plate, the work is like the different periods of a long activity. It is hard to realize that it represents merely the experimenting and recreation of a few years past. One could distinguish several manners, the tremulous expressiveness of the little nude Kitty Resting suggests Whistler; two or three able little memoranda of the Highlands of the Hudson have the frank and direct naturalism of Lalanne or of Daubigny's delightful minor plates; two or three charming architectural bits from old Portsmouth recall just a bit the mood of the smaller Canaletto prints. Then there are plates of old homes amid gardens delicately shimmering and dappled with shadows, the method being so thoroughly effaced that the masses of lines have been completely transmuted into tone. Here, of course, Mr. Hassam's own painting underlies the new effort, and the clearest graphic analogy is Whistler's lithographs. There is an amazingly minute and well-balanced study, Old Warehouses, Portsmouth, which actually assumes the crumbling deliciousness of a lithograph at six-foot range. Its very perfection suggests Mr. Hassam's occasional failure to grasp the idiom of etching. A number of larger interiors with figures are very skilful in adjustment of values of light, very elaborate in execution, and have a not quite happy look as of reproductive prints. These may well be the field of experiment in a new technic. If so, they enhance one's idea of the artist's vitality and resourcefulness.

If I have emphasized the variety of the show, I do not wish to minimize its essential unity. Mr. Hassam carries over into etching the convictions of a delicate luminist. He refuses consistently the broader and more idiomatic means of expression—the areas of dazzling white paper balancing areas of velvety black, which are common to Rembrandt and the recent English etchers under his domination. Mr. Hassam refuses these unnatural contrasts, and multiplies delicate weavings of lines which combine at the right distance into tone. There is almost always an ideal of a definitely pictorial sort. There never was less a sketcher etcher, and this is very interesting, for Mr. Hassam is one of the most accomplished sketchers of our times in water-color and pastel. It shows the seriousness with which

he is taking the new departure. The reticence and subtlety of the method give these prints distinction. In the best, perhaps Cos Cob Docks, and the river scene fancifully named Old Lace, the tenuous yet complete web of lines does its work of constituting tone and value while persisting as visible line. Such plates as these, and the Athenæum, Portsmouth, seem very definitely Mr. Hassam's own contribution to etching. Their equilibrium is a very sensitive one; a little forcing of the contrasts, a further multiplication of the lines in masses, and we should have merely one more "picturesque" or overworked plate. In setting himself a definite pictorial ideal identical with that of his painting, Mr. Hassam goes far to asking the impossible of the etched line. How far he is wise in sacrificing the obvious picturesque resources of the medium is another question. It is enough to record the probity of the effort and its success. Mr. Hassam's capacity to keep the relish of his mood through these new and minute processes of working, biting, and printing the plate reveals anew the tenacity which gives edge to his finesse. He is fully conscious of the sacrifice he is making, for the splendid woman's torso, called simply Nude, is as plastic and velvety as a Zorn. As I write my eye falls on Samuel Palmer's The Morning of Life, with its throbbing contrasts of light and dark rippling over the lovely linear pattern. It is the organ note of etching, or rather the full chord as first sounded by Rembrandt. Yet I do not doubt that Mr. Hassam will make for us exquisite music within the limitations of the oaten flute which he has chosen to be his instrument. M.

Finance

A CURIOUS INCIDENT.

In future economic histories of the European war, it is probable that one particular combination of events will be described with considerable interest—the sweepingly successful completion of the German army's military campaign in Servia, and the reception of the news, in the outside world, by the most rapid movement of the foreign exchanges against Berlin that has occurred since the war began. Two weeks ago, when it was still imagined that a chance of relief to the Servians by the Allied armies existed, German exchange at New York was quoted, on the usual basis of reckoning, at 80⅝ cents for four marks. This was above the previous low level of war-time—80⅜ at the opening of September—but it also compared with a normal parity of 95½. On Monday of last week a rapid decline began. The rate touched 79⅝ that day; on Tuesday it was down to 79⅜; on Friday it fell to 78¼.

A movement so striking as this, under all the circumstances, raises the question again, exactly what such fluctuations in exchange on a given belligerent market mean. It is possible for a fall in exchange like this week's to mean one or all of three things. It may simply reflect the balance of trade; the Imperial Finance Minister has officially declared that the depreciation of New York exchange on Berlin is merely a necessary result of the blockade of Germany. On that theory, the present week's fall in Berlin exchange has in some quarters been accounted for by the increased severity of the British blockade. The decline may also reflect, however, increasing depreciation of the German currency.

There is no gold premium in Germany; largely, perhaps, because a law was passed in the autumn sending a man to prison if he should offer such a premium. But gold redemption of the currency has been suspended in Germany since the war began; a draft on Berlin, purchased in the foreign exchange market at New York, can be redeemed at Berlin only in current funds, and the New York purchaser of that draft at a heavy discount from its normal gold redemption value cannot be put in a German jail. Following the suspension of gold payments in Germany during August, 1914, the Imperial Bank's note issues, by the latest weekly return, have been increased $1,000,000,000, or 212 per cent.

How far, in the third place, such a fall in exchange could be held to reflect an unfavorable change in the economic or political situation of the market on which the bills are drawn, is a more obscure question. All that one can say certainly is, that the oldest tradition of modern finance is that, when the foreign exchanges move in favor of a given country, things are going well with it, and that the contrary is equally true.

Had this theory been applied to England and France, at the time when New York exchange on London and Paris touched the year's low level on September 1, one might say, even now and in retrospect, that the movement did mean unfavorable developments—economic, political, and military. Last week's break in Berlin exchange can hardly mean adverse judgment on the German military news. Whether, on the other hand, it was connected with other aspects of the situation—obscurely indicated by the break in the Austrian Cabinet and the angry controversy which began when the German Reichstag reconvened last week—and whether, therefore, it had anything to do with the political and economic situation, is a matter which the longer sequel, both of the economic history of the war and of the foreign exchange market, may have to settle.

Such an incident as this sweeping movement of exchange rates adversely to Berlin revives, very naturally, the talk of "financial exhaustion" which equally prevailed during the similar movement of exchange on London and Paris, just three months ago. It therefore led to fresh talk of a possible formal move towards peace—concerning which, it has certainly seemed of late that, if such proposals were to come just now, they would come from Germany. Rumor itself has never yet attributed the purpose of such proposals to the Allies; indeed, the real news of the week with a bearing on their attitude has been Italy's pledge to make no independent peace.

But even when a depreciated exchange reflects a depreciated currency, it does not necessarily mean exhaustion. Exchange on London during 1809, at the great neutral Continental cities, was as badly depreciated as is Berlin exchange to-day; yet England fought France for the next half-dozen years. On general principles, the case should be the same with Germany now—especially as the last word in expedients of war finance, issue of irredeemable paper directly by the Government, has not yet been said.

Yet the terms of peace may nevertheless be stated, by Germany or by the other belligerents, and Wall Street has indulged in considerable conjecture as to what the effect of such an incident would be. Any proposal with an official backing would inevitably start the markets into an effort to "discount" the effects of actual negotiations, and the resultant possibility of serious negotiations to end the war. As to what that possibly not immediate turn in events would mean to the actual course of things on the Stock Exchange, there are three considerations worth remembering. The "war industrials" have at least had a good part of their inflated speculative valuation squeezed out of them. The standard investment issues have a larger stake for their long prosperity in returning peace than in protracted war. Finally, this week has brought very definite evidence that the revival of activity in American trade is no longer dependent on such an incident as the "war munitions orders."

THE FREUDIAN WISH

Its Place in Ethics

By EDWIN B. HOLT

By his careful work, no less than by his brilliancy, Dr. Sigmund Freud has made his name one to conjure with in psychology.

Professor Holt here reviews Freud's work in its ethical aspect. He shows what support this newest of psychological theories affords to the ancient identification of Virtue and Knowledge, and while giving due consideration to the well-known Theory of Dreams he is careful to indicate its subordinate place in the whole of Freudian theory.

The Romance of

Old Belgium

Elizabeth W. Champney

8vo. Ninety Illustrations. 440 Pages. $2.50 net

As in her previous stories of the old Chateaux and Villas of France and Italy, the author puts the story of Old Belgium into the mouths of the people of the time. She unfolds in the same fascinating manner that has made her other Romances so popular, the rich web of history and tradition that the eventful centuries have woven about that now devastated country.

At All Booksellers

Illustrated Holiday Catalogue (48 pages), and Fifty Well Tested Books for Young Readers (25 pages). A Postcard brings them.

New York 2 W. 45th St. **G. P. Putnam's Sons** 24 Bedford St. London

A little known period of Spanish Colonial history is interestingly and authoritatively treated in

Texas in the Middle Eighteenth Century

by **HERBERT EUGENE BOLTON,** *Professor of American History in the University of California.*

Not only a scholar's contribution to a hitherto almost unknown period in the history of Spanish colonization, but also an extremely interesting narrative of frontier life as experienced by Spanish pioneers—priest, soldiers, and adventurers. These studies are based almost entirely on unpublished manuscript sources, many of them in themselves documents of great "human interest."

8vo, 458 pages, cloth, illustrated. $3.50.

READY DECEMBER 15.

Are You a "Store-keeper" or a MERCHANT?

Filling the shelves of a store with goods is store-keeping; selling the goods is merchandising. There is a power that will move the goods. It is the power of printed salesmanship—a power that is revealed in all its varied potentialities in the book called

"Keeping a Dollar at Work"

It was written by TRUMAN A. DE WEESE, Director of Advertising for The Shredded Wheat Company, a man who has spent millions of dollars in advertising. A book for the merchant, for the manufacturer, the banker, the business man. It is published by *The New York Evening* Post, printed by The Nation Press, and will be sent to any address upon receipt of the price, One Dollar.

The Nation
At Leading Book Stores

South America
What It Means to You

Do you know
—that Brazil is larger than the United States by more than 200,000 square miles?
—that Chile is as long as from New York to San Francisco?
—that the population of Buenos Aires may exceed that of Chicago in 1930?
—that South America has more undeveloped wealth than any other land?

All eyes are now turned toward South America. Thousands of Americans are now planning and scheming to cash in on these wonderful resources that the Panama Canal and European war are literally forcing on us.

Have you read
The South American?

It is the magazine for the progressive man and woman, because progressive people are interested in Spanish-speaking countries. The business man finds in it the information which for value is seldom found in other publications. Others find The South American interesting because of the opportunities it describes, the possibilities it presents, and the newly launched projects it announces.

Free Spanish Lessons

Each issue contains a lesson in Spanish. They are prepared in a simple way that makes them easily understood and quickly mastered. Not a few subscribers have said that the lessons alone are worth more than the cost of the magazine for one year.

The Time to Strike Is Now

Before the war terminates is the time to study Latin-America and her exhaustless wealth of opportunities for those contemplating going there, and for those who intend to remain here as well. Positions are now open to stenographers, salesmen, shippers, correspondents, and others, that have only become possible because of the awakening of the Americans to the possibilities that lie in store in the southern lands.

Trial $1.00 Offer

Fill out the blank below. You will like The South American because it gives you what you will not find in other magazines. Don't miss the interesting travel topics that are due for the coming year. The photographs taken in this wonder continent will charm you—you will want the Spanish Lessons.

THE SOUTH AMERICAN,
61 Broadway, New York.

Gentlemen: I enclose $1.00 for which please send me The South American for nine months, commencing with the ..... issue, and send me, free of charge, all the previous lessons in Spanish that have appeared in the magazine.

The Military Obligation of Citizenship

By Major-General LEONARD WOOD, U. S. A.

Preface by President JOHN GRIER HIBBEN of Princeton University

THEODORE ROOSEVELT

reviewing this book for the Princeton Alumni Weekly says:

"I wish that this book could be circulated not only through our colleges, but through all ranks of good American citizens. General Wood deals in facts and uses words to represent facts; and he has translated his words into deeds. The lesson he seeks to teach is the lesson of all others most important for this nation to learn."

"Deserving of a place with the six best books that have been published since July 23, 1914."—*Baltimore Sun.*

"This little volume is, in substance, the nation's case for preparedness. General Wood's terse yet cogent argument from history, his enlightening contrasts of present with past conditions, and his resolute endeavor to eliminate all suspicion of vainglory or jingoism render his work practically a manual of patriotism."—*Philadelphia North American.*

"Naturally his views will not be received with favor by the more extreme peace advocates, but it is a safe assumption that they will be accepted as moderate and sensible, even if debatable, by those who view the question dispassionately."—*Springfield Republican.*

Illustrated, cloth, 75c. *net, by mail* 80c.

The Mikado: Institution and Person

A STUDY OF THE INTERNAL POLITICAL FORCES OF JAPAN

By WILLIAM ELLIOT GRIFFIS

From ancient documents, from modern records, and from his own observations and studies, Mr. Griffis contracts a view of Japan, of the Japanese, and of the salient features of their history, their institutions, and their problems of the present and future.

"Dr. Griffis's vivid interpretation of the significance of the man and the office appears at a moment when the attention of the world is directed at both capacities."—*Springfield Republican.*

"Dr. Griffis has written a history of Mikadoism that is as entertaining as it is comprehensive, and his life story of Mutsuhito, Man of Peace, must be counted as one of the most interesting biographical writings of the year."—*Baltimore Sun.*

356 *pages, cloth,* $1.50 *net, by mail* $1.58.

Suggestions for Christmas Giving

Mediaeval Church Vaulting

By CLARENCE WARD, *Assistant Professor of Architecture, Rutgers College, and Lecturer on Architecture, Princeton University.*

This volume, published November 20, 1915, is the fifth to appear in the Princeton Monographs in Art and Archæology.

A knowledge of vaulting is essential for the thorough student of Mediæval Architecture. What has been gathered from authorities here and abroad and from a study of the monuments themselves has been classified and discussed in a systematic manner in this book. The hundred attractive illustrations are in large measure from photographs taken by the author or purchased in Europe.

204 *pages, 4to, cloth,* 93 *illustrations,* $4.00 *net, by mail* $4.10.

Government of the Canal Zone

By GEORGE W. GOETHALS, *Governor of the Canal Zone.*

"Here we have the story of a wonderful development told in a succinct and readable way. To the average American seeking information for information's sake, this book will be valuable. It has the virtue of brevity and inexpensiveness."—*Book News Monthly.* 110 *pages, 12mo, cloth, illustrated,* $1.00 *net, by mail* $1.06.

Luca della Robbia

By ALLAN MARQUAND, *Professor of Art and Archæology in Princeton University.*

This volume, the third of the Princeton Series of Monographs in Art and Archæology, presents a Catalogue Raissoné of the works of Luca della Robbia.

"It is an admirably complete and scholarly monograph on one of the most charming phases of Italian Art that can be read with interest by the neophyte and must be taken as an authority by the student."—*New York Sun.*

326 *pages, quarto,* 186 *illustrations, cloth, boxed,* $7.50 *net, by mail* $7.62.

Heredity and Environment in the Development of Men

By EDWIN GRANT CONKLIN, *Professor of Biology in Princeton University.*

"It is a scholarly survey of the subject with attention to scientific accuracy and an avoidance of difficult technical terms. The general reader will perhaps be most interested in the author's views of eugenics."—*Springfield Republican.*

548 *pages, 12mo, cloth, illustrated,* $2.00 *net, by mail* $2.10.

The Balkan Wars, 1912-1913

By JACOB GOULD SCHURMAN, *President of Cornell University, and Minister to Greece and Montenegro, 1912-1913.*

"President Schurman follows the history of The Balkans through 1912 and 1913 and makes plain the underlying causes for the present disturbance."—*Pittsburgh Dispatch.* 156 *pages, 12mo, cloth, maps,* $1.00 *net, by mail* $1.06.

Lost Mosaics and Frescoes of Rome

By CHARLES R. MOREY, *Assistant Professor of Art and Archæology in Princeton University.*

A publication of drawings contained in the collection of Cassiana Dal Pozzo, now in the Royal Library, Windsor Castle.

"The author displays a close familiarity with the works of these early artists in pigment and mosaic, and has succeeded in producing a valuable monograph upon this somewhat unusual topic."—*Boston Transcript.*

84 *pages, 4to,* 24 *illustrations, cloth,* $2.00 *net, by mail* $2.08.

The Scotch-Irish in America

By HENRY JONES FORD, *Professor of Politics in Princeton University.*

"It is an interesting narrative because it discloses the continuity of thought and motives of the people from Scotland through Ireland to the United States. . . . Professor Ford has arranged his material in logical fashion and in good literary style. It will appeal to a large portion of the American public."—*Philadelphia Inquirer.*

616 *pages, 12mo, cloth,* $2.00 *net, by mail* $2.10.

Biblical Libraries

By ERNEST CUSHING RICHARDSON, *Librarian of Princeton University.*

"Mr. Richardson's diligence has gathered material from the works of archæologists, epigraphists, Egyptologists, and others, to fill a book of more than two hundred pages, and a score and a half of helpful illustrations are interspersed. The work is well done."—*The Dial.*

268 *pages, 16mo,* 30 *plates, cloth,* $1.25 *net, by mail* $1.33.

Virginia Under the Stuarts

By THOMAS J. WERTENBAKER, *Assistant Professor of History, Princeton University.*

"Sets the facts before the reader in a manner that makes his history fascinating reading."—*Boston Transcript.* 284 *pages, 8vo, maps, cloth,* $1.50 *net, by mail* $1.58.

Just Published

THOMAS MIDDLETON

The latest volume of the "Masterpieces of the English Drama" Series, FELIX E. SCHELLING, General Editor.

Introduction by MARTIN W. SAMPSON, Cornell University.

410 pages. 70 cents

The four plays given in this volume show Thomas Middleton as the ready maker of vivid dialogue, lively scenes, well-constructed plots and very human stories. *Michaelmas Term* and *A Trick to Catch the Old One* show him in his best comedy vein; *A Fair Quarrel* and *The Changeling* illustrate his power in tragic drama of romantic quality. An illuminating introduction, notes and a glossary provide the reader or student with every needed help. Printed on toned paper; attractive typography.

Read

MY YEAR OF THE GREAT WAR

By FREDERICK PALMER

"Frederick Palmer has seen more war than any other living American writer."
—Theodore Roosevelt.

DODD, MEAD & COMPANY, NEW YORK

This week's issue of THE NATION comprises 14,924 copies; of this 8,449 go to paid subscribers and 1,151 go to exchanges or are sent out as free copies. The average weekly newsstand sales during the first ten months of the year 1915 were 801. October average, 797 copies.

In view of the large library and college and family circulation of THE NATION, it is safe to assume that not less than 30,000 people read it each week.

"No other book with anything like its completeness"

SIX FRENCH POETS

Studies in Contemporary Literature

By AMY LOWELL

Author of "Sword Blades and Poppy Seed," "A Dome of Many-Coloured Glass," etc.

A brilliant series of biographical and critical essays dealing with Emile Verhaeren, Albert Samain, Remy de Gourmont, Henri de Regnier, Francis Jammes, and Paul Fort. Written by one of the foremost living American poets, it is the first book in English containing a careful and minute study of the famous writers of one of the greatest epochs in French poetry.

The translations make up an important part of the book and together with the French originals constitute a representative anthology of the poetry of the period.

"A thoughtful, comprehensive and most valuable contribution to modern criticism."—*N. Y. Tribune.*

"Timely and able estimates. . . . A judicious blend of the critical and biographic."—*Boston Globe.*

"The richest, the most thorough account of the subject. No other book with anything like its completeness. . . . It has all the conviction and understanding, the contagious impulse of that other book of literary passion which so aroused and stimulated American culture a generation ago. It is needless to remind the reader that I refer to Mr. Howells' work, beside which this stands as a path-finder."—*Boston Transcript.*

On receipt of your order we will mail you a Christmas card in colors for you to send the friend to whom you have given The Nation

The Nation
20 Vesey St., New York

South America and the War

Bolivia has an area equal to sixty Belgiums, yet it has but one-third of the population of the German-seized kingdom.

On the other hand, Germany could be placed into Peru, and there would still be room for Spain, France and Italy.

Of the vast area still unmentioned, we have Brazil, which would have more than 200,000 square miles unoccupied after the United States was put into it.

The vital question at this moment is, will we take advantage of the opportunities flung on us by Fates that have not been so kind to Europe?

The South American is presenting to the people of North America the important news and information about Latin American countries.

The South American will interest you, whether you are in business or not. It will stir your attention and grip your interest with the opportunities it describes, the possibilities it presents, the newly launched projects it announces, and the

Free Spanish Lessons

found in every issue. They are so simplified that the beginner understands without the difficulty arising from complicated study books. Even high school students are finding the Spanish Lessons valuable in conjunction with their language studies.

TRIAL $1.00 OFFER

Fill out the blank below, and learn about the wonderland of the Americas, and the opportunities open to business people, stenographers, salesmen, correspondents, and even those who will never go to Latin America. Those writing Spanish need not leave here, as positions await them here with corporations exporting to Spanish America.

This offer may be withdrawn at any moment. The regular subscription price is $1.50 the year.

THE SOUTH AMERICAN,
61 Broadway, New York.

Gentlemen: Enclosed find $1.00 for which please send me The South American for nine months, commencing with the ..... issue, and send me, free of charge, all the previous lessons in Spanish that have appeared in the magazine.

The Nation

NEW YORK, THURSDAY, DECEMBER 16, 1915.

Summary of the News

The United States' note to Austria on the torpedoing of the Ancona was dispatched to Vienna on December 8. The full text was published in Monday's papers. The note, which is dated December 6, and signed by Secretary Lansing, is noticeably stronger in tone than previous documents relating to the Lusitania, which have been addressed to the German Government. It "demands" a disavowal of the act, the punishment of the officer responsible for it, and the payment of an indemnity for American citizens wantonly slaughtered.

There is evidence that the Federal Government, in accordance with the President's suggestion in his message, is giving serious consideration to the question of Teutonic conspiracies in the United States. The matter was considered at a conference at the State Department last week, at which many members of the Cabinet were present, and dispatches from Washington express the opinion that agencies of the various departments will be coordinated into a single body for the purpose of investigating these particular conspiracies. Specific suggestions for legislation which shall give the Government powers adequate to deal with the situation were made in the annual report of Attorney-General Gregory, published on December 10.

Among interesting evidence in these cases said to have been discovered during the past week may be mentioned the revelation that von Rintelen (whose activities the German Government has thought it worth while to disown) was actively engaged in an attempt to promote a revolution in Mexico on behalf of Huerta, to the intent that the United States might become embroiled. On December 10 was published the translation of a letter signed by Baron Zwiedinek, chargé d'affaires of the Austrian Embassy, which contains suggestions for the purchase of false passports. According to dispatches from Washington of the following day, Baron Zwiedinek, while admitting the authenticity of the letter, has explained that it was signed by him in the way of routine, and without his knowing its contents, at a time when the embassy was still under the direction of Dr. Dumba. Further evidence, it was reported on Tuesday, has also been discovered bearing on the activities of "Labor's National Peace Council."

Secretary McAdoo's annual report for the fiscal year ended June 30, 1915, was made public on December 8. Secretary Garrison's annual report on the army, containing a strong plea for adequate land defence, was published on the following day. On December 10 was published a statement on the question of preparedness, submitted to Secretary Garrison by the military experts of the War College division of the General Staff. Secretary Daniels's annual report on the navy, setting forth some of the naval lessons of the war, and making various recommendations for increasing the naval power of the country, was made public on December 12.

Secretary Lansing issued a brief statement on Friday of last week, announcing that the German Emperor had "been pleased to recall Captain von Papen and Captain Boy-Ed, in compliance with the wishes of the United States Government."

President Wilson spoke on December 8 at a luncheon at the White House to members of the Democratic National Committee. On December 10 the President addressed the Chamber of Commerce at Columbus, O.

A reminder that the question of the Frye is still a matter of controversy with Germany came in dispatches from Washington on December 8, which stated that the German reply to the last American note, that of October 12, had been delivered to Ambassador Gerard, and would be mailed to Washington.

The American liner Carolina, of the New York & Porto Rico Line, was last week stopped, when just outside the three-mile limit, by the French cruiser Descartes, which took off her a German chief steward. This and similar matters have been taken up by the State Department in a note sent to France on Tuesday.

Presumably as a result of Ambassador Page's protest, the steamers Hocking and Genesee, flying the American flag, will not be requisitioned by the British Government, according to dispatches from Washington of December 9. The Hocking and Genesee are to be transferred from the prize courts at Halifax and St. Lucia to the main British prize court in London, and on the result of the decision in the case of these ships will depend the attitude of the British Government towards the rest of the fleet of the American Transatlantic Company. The British contention is that the ownership of these ships is in part German.

In the Senate on December 10 the diplomacy of the Administration came up for discussion. Senator Hoke Smith started debate by introducing a resolution calling for an investigation by the Foreign Relations Committee of the interference by Great Britain with neutral trade. Senator Lodge retorted by introducing an amendment calling for an investigation of the law and the facts in the attacks by submarines on the Lusitania, Falaba, Hesperian, Arabic, Gulflight, and Ancona, and of the conspiracies against the neutrality of the United States, referred to in the President's message. Resolution and amendment were referred to the Foreign Relations Committee.

American ships will continue to sail on the Pacific, according to an announcement made on Monday by Charles A. Stone, president of the American International Corporation, which was recently formed with a capital of $50,000,000 for the purpose of strengthening the position of the United States in international commerce. Mr. Stone announced that the company had purchased the ships still remaining under the flag of the Pacific Mail Steamship Company.

The Allied forces have evacuated the strip of territory they held in Servia, and are in retreat on Salonica, where it is believed they will establish themselves in winter quarters, making of the port a base, under cover of the guns of the fleet, from which they may resume the campaign at a favorable moment. News reports appear to be agreed that a satisfactory settlement has been reached with the Greek Government, but official confirmation of this is still lacking. Germany, according to dispatches from London on Tuesday, is likely to add to the difficulties of Greece by lodging a determined protest.

Under the pricking of Socialist members, the German Chancellor discussed the question of possible terms of peace in the Reichstag on December 9. Comment on the speech will be found in our editorial columns.

Detailed figures of the results of Lord Derby's recruiting campaign, which ended officially on Saturday, but on account of the congestion of the recruiting offices was extended for another day, are not yet available. All reports agree, however, that it has been successful beyond any expectation. Early reports of numbers gave approximately 4,000,000, a figure which is doubtless exaggerated.

The report, which we quoted last week, that the American oil ship Communipaw had been torpedoed in the Mediterranean, appears to have been greatly exaggerated. Information on the subject received by the State Department is fragmentary, but, according to dispatches from Washington on Tuesday, whatever may have happened, the ship has reached Alexandria. Teutonic torpedoes have been fairly successful during the past week, having accounted for ten merchant ships in all, according to reports received: four British, three Italian, two Norwegian, and one Danish. An official statement from Vienna on December 8 announced the sinking by a submarine of a small Italian cruiser.

A bill to extend the duration of the present Parliament beyond the five-year limit, and to postpone a general election during the war, was introduced in the House of Commons on December 9 by the Home Secretary, Sir John Simon. On Monday the House of Commons passed the second reading of a bill empowering the Government to mobilize American or Canadian securities, by purchasing or borrowing them, to be used primarily as collateral for loans, or, in case of necessity, to be sold to meet Great Britain's liabilities in the United States. A reduction, as part of a general scheme of economy, in salaries of law officers of the Crown was announced by Premier Asquith last week.

Dispatches from Peking, under date of December 11, announced that Yuan Shi-Kai, President of the Chinese Republic, had accepted the throne of China, tendered to him by the Council of State. True to historical precedent, Yuan Shi-Kai is reported first to have waved the offer aside, but subsequently to have been prevailed upon to accept it. It is understood, however, that no celebrations are to take place to mark the change until a more favorable moment.

The Week

Three very modest and simple recommendations are made by Attorney-General Gregory for the strengthening of the national Government in its dealings with offences committed in behalf of belligerents in a war in which our own country is neutral. The first is that authority be given the Government to seize arms and ammunition about to be shipped from the country under circumstances which make the shipment a violation of our neutrality laws. The third deals with persons escaping or attempting to escape from an interned warship of a belligerent nation; Mr. Gregory recommends that this be made a crime against the United States, or at least that authority be given to the Government to arrest persons so offending. The second recommendation comes much closer home to what has been agitating the public mind; this is that it be specifically made a crime against the United States to place bombs or other explosives on vessels sailing from the United States. Such a provision of law is so obviously desirable that there can be no doubt of its prompt and unhesitating enactment by Congress. The only question that is likely to excite curiosity or discussion is whether this measure is the only one that is practicable—or necessary—for dealing with the situation. If that is as serious as is indicated by the language of the President's message concerning plots against American industry as well as in violation of our neutrality, the question obtrudes itself whether it can be effectively dealt with under existing laws. The absence of any recommendation by the Attorney-General on this head, except that relating to bombs placed on ships, suggests the inference that the difficulty is not as serious as it has sometimes appeared to be.

"Recently," says Secretary Daniels in his annual report, "in naval circles the pendulum may be said to have swung away from an over-large undersea programme, with emphasis again placed on the Dreadnought." We are thus in a position to grasp the workings of that awesome mystery, the expert mind. When a German submarine sinks three British cruisers at a stroke, the man in the street quickly believes that the submarine has done for the big ship, whereas the cautious and well-informed expert recognizes that the undersea boat is destined to work a revolution in the history of maritime warfare. When German submarines keep picking off a brace of British merchantmen per day, the humble newspaper reader gives it as his opinion that the submarine is decidedly "it," whereas the expert recognizes that Britain's supremacy of the seas is seriously threatened. After half a year the man who reads his newspaper every morning discovers that the German submarines are not doing very much, for the simple reason that the British navy has found a way of dealing with them most effectively. So the man in the street concludes that, after all, there is something to be said for the big ship. Does the expert put it so crudely? No. In naval circles the pendulum swings from an over-large undersea programme to a big-ship programme. Thus the difference between the ordinary man and the expert in deducing lessons from the war while the war is still under way consists in the fact that the ordinary man changes impressions while the expert swings like a pendulum.

The seizure by a French cruiser of Germans working on an American merchant ship appears to have been a clear violation of established principles of international law. Had these men been bound for a German port, the seizure might have been justified on the ground that the men, being capable of military service, were presumptively destined for the German army. But such right to seize and remove them does not hold if, as in the actual case, the ship on which the men were found was bound from one neutral port to another. Our Government has taken up the case, and we have no doubt will insist upon the maintenance of American rights in this matter. In the famous case of Mason and Slidell, the United States did, in regard to those Confederate Commissioners, very much what France has done in the matter of these Germans; but we were sharply challenged by Great Britain, disavowed the act, and freed the Commissioners.

In more than one way the German Socialists are logically the ones to bring forward the advisability of beginning peace negotiations. They are the Opposition in the Reichstag. They represent more than any other party the masses upon whom the burden of the war has fallen most heavily. But, above all, the international character of the Socialist movement compels it to be the pioneer in any attempt towards the appeasement of national hatreds and suspicions. To be sure, the internationalism of the Socialists is today badly damaged, but in all countries efforts are under way towards its reconstruction. It would be fatal for the future of international Socialism if to non-Socialists were left the initiative in a movement towards peace and reconciliation. From this point of view, the debate in the Reichstag on Thursday of last week may prove to be not altogether without result. The German Government has gone officially on record against making peace overtures to the enemy. But the Socialists have equally declared in favor of peace on the basis of no annexations. What we await with interest is the sign of any response by Socialists in Allied countries. There is little chance of the Socialist parties as a whole either in England or in France meeting the German Socialists half way, but even if a small but appreciable number of Socialists in either country come forward, the beginning will have been made towards bridging the chasm.

One statement in the German Chancellor's speech last week has received official denial by the British Government. Bethmann-Hollweg referred to the Baralong case, and asserted that German sailors from a submarine had been brutally fired upon and killed when in the water by that British war vessel. This is the charge which made a sensation in the Reichstag, as uttered by the Chancellor, but which the English official communication of last Saturday declares to be "unwarranted." The full evidence in the affair has not yet been made public, being the subject of diplomatic correspondence between London and Washington. All that we have had has been affidavits by some muleteers who were aboard the Nicosian, which ship the submarine had attacked before the Baralong came up. The captain of the Nicosian denied that helpless German sailors had been murdered, in the way alleged; but the fact is that the affidavits themselves, upon which alone, it would appear, the German Government depends, were on their face incredible. Here, for example, is a statement sworn to by one muleteer:

> We were picked up by the steamer [the Baralong]. . . . There was a general rejoicing, shaking of hands, and congratulating us upon our escape, when the captain of the steamer, William McBride by name, gave the command: "Come on, boys, let us shoot these poor wounded devils in the water."

This is so plainly and flatly impossible that anything else made oath to by the author of that affidavit could not be believed without corroboration. Yet the Germans appear to have swallowed it whole.

Four million is undoubtedly an exaggerated estimate of the number of Englishmen

who have come forward to enlist under Lord Derby's scheme. But there is little doubt that the response has been enormous, and that the prospects of conscription in England are remote. About a week ago the London *Daily Mail*, leading exponent of compulsory service, spoke of the rising tide of recruiting in a way to indicate that the conscription game was up. To understand, however, the rush for enlistment it is necessary to recall that enlistment under Lord Derby's plan is not volunteering for immediate service. On the basis of the recent register of all males of military age, there have been organized forty-six groups. Groups 1 to 23 are the unmarried men from 18 years to 41. Groups 24 to 46 are the married men, classified in the same way. When a man enlists he is assigned to his proper group according to age and marital condition. Thus an unmarried man of twenty-five goes into group 8, a married man of eighteen into group 24, the principle being that the unmarried men of 40 will be called up before the married men of 18. The groups will be summoned in numerical order as the need arises, but opportunities will be supplied for the members of all groups to indulge in preliminary training if they are so inclined. When a group is called up, any man will receive a chance to show cause why he should be transferred to a later group. More important will be the work of the councils established for the purpose of excluding those men who are needed for war-work at home. Apparently, the great mass of Englishmen have accepted the new system.

In commenting on the first year's returns from the Federal income tax, Representative Underwood pointed out, in July, 1914, that the tax as a whole had been operative for only ten months of the calendar year 1913, and that the supertax on large incomes had become operative only after the passage of the bill in October. As the period in which it applied in regard to this class of incomes, besides being so short, did not cover either of the great dividend dates—January 1 and July 1—he regarded the tax collected during the fiscal year ending June 30, 1914, as equivalent to little more than half a year's tax. The total was about $28,250,000, or far less than the $45,000,000 which the Treasury had estimated. The figures for the year ending June 30, 1915, as made public on Saturday by the Commissioner of Internal Revenue, show that Representative Underwood's forecast of the future was too hopeful. The increase does not double the first year's collections, but adds only half again as much to them. There is an added revenue from this source of $13,000,000, or nearly that, making the whole return $41,046,162—a sum still short of the initial forecast of $45,000,000. Moreover, it is thought that several millions of income taxes held back under the provision of ten days' grace after June 30, 1914, appeared as receipts for the fiscal year just closed, though really belonging to that preceding. But it is to be pointed out that there was a marked decrease in the returns from large corporations, which had apparently suffered much during the earlier part of the fiscal year.

Postmaster-General Burleson, in his annual report, renews the recommendations made in his last two annual reports that early action be taken by Congress declaring a Government monopoly over all utilities for the public transmission of intelligence. He wants the telephone and telegraph systems of the country incorporated as soon as possible into the postal establishment. There is no sign, however, that this desire, expressed not only in successive years by the present Postmaster-General, but likewise by his predecessor in Taft's Administration, is being backed up in any other important quarter. President Taft made it very plain that he was not responsible for the recommendation, and President Wilson has been, so far as we can remember, entirely silent on the subject. Accordingly, as the Postmaster-General reports not to Congress, but to the President, the suggestion is not before Congress at all, except as it might be if any private citizen who had the ear of the nation had made it. As for public interest in the project, it is so slight as to be negligible, in relation to a project of such enormous magnitude as that of the acquisition and operation of the telegraph and telephone systems of the United States.

The predominance of the South in assignments to committees at Washington does not promise much in the way of a Republican issue. Of the 53 standing committees in the House, 31 have Southern chairmen and 22 have Northern chairmen. But, as the Atlanta *Constitution* remarks, the division of important chairmanships is a fair one, and, "if political strength and political loyalty be considered, the South has received no more than it is entitled to, and, perhaps, a little bit less." One reason for this preponderance is that the South has the habit of keeping a man at Washington term after term, with the result that its members are apt to surpass others in seniority of service and thus be at the head of the line when chairmanships are to be awarded. Of the Northern States, only Maine has been shrewd enough to follow this policy consistently. At the same time, the solidity of the South has worked against its own interests. Its vote was taken for granted, with the result that a Democratic triumph like that of Cleveland meant more for the party in the North than in the section where it was regularly strongest. Another factor of more or less influence was the persistence of sectional feeling, which made it much harder for a Democratic Administration of the nineties to place many members from the South in the seats of the mighty than is the case to-day. The war with Spain may have to its credit a definite lessening of this feeling, although the real or fancied dragging in of the "issue" in the recent reëlection of Senator Clarke of Arkansas as President pro tem. of the Senate shows how long it takes to end it. Certainly it is high time that the North stopped speaking of the South as if it were in some way tinged with hyphenism.

Mayor Blankenburg's ringing words for straight Americanism have a force far beyond that of the words themselves. The man that does the kind of work for his own city that Rudolph Blankenburg has done for Philadelphia need give no assurance, so far as he himself is concerned, that he is as good an American as any native-born son of the soil. What his sentiments or sympathies are as between the two sides in the great war, we do not know; but whatever they may be, we are quite sure that they are such as not to interfere with a whole-hearted devotion to the country in which he has lived his adult life, and to which he has given an abundant return for all that it may have done for him. There are, of course, extremely few citizens of any class that can point to such a record of service and leadership; but there can be no doubt that the number of Americans of German birth or descent who feel just as Mr. Blankenburg does is incomparably greater than that of those whose allegiance is divided or lukewarm. The trouble is that it is the latter kind who have been doing most of the talking during these troubled times.

"There are hundreds of millions in it" is a statement that would have taken away the breath even of Col. Sellers. Yet it is asserted of railway plans during the last ten years that they have more than made good the

assurance of one expert that a million a day could be saved by scientific management. One student has been surveying the freight traffic of thirty-five leading railways. He finds that during the last fiscal year the average train carried 504 tons; during the fiscal year ending in 1914 it hauled but 482. As in 1904, the average number of tons per freight train was little over 305, in the decade the carrying capacity had been increased 65 per cent. The result is an annual saving of millions of train miles, and a very great reduction in the cost of operation. The experiments in train-loading started by James J. Hill represent, of course, only one side of the general struggle of the railways for economy. In passenger traffic also, in the maintenance of the roads, and in administration the efficiency engineers have made improvements of far-reaching value. There is no doubt that hard times have spurred the railways in their efforts, but the general tendency of business and industry towards greater efficiency would have played its part under any circumstances.

The announcement made in the House of Commons on Monday by the Chancellor of the Exchequer as to the Government's intention to buy American securities now held in Great Britain is of great interest on both sides of the water. The securities will be paid for in 5 per cent. five-year Exchequer bonds. In addition to securities thus bought, American securities will be taken on deposit by the Government, with the privilege of selling in certain contingencies. The general object of the proceeding is, of course, that of providing means of establishing credits in this country, to meet the mounting balance of trade resulting from the enormous excess of exports from this country over imports into it. This will inevitably continue throughout the duration of the war. It is possible—though this was not at all indicated in Mr. McKenna's remarks—that American securities acquired by the British Treasury, whether obtained by purchase or held on deposit, may be made to serve as collateral securities for some future Government loan to be placed in this country. But more probably they will be used simply to sell on the market at such times as may seem most expedient. If the tremendous export balance that has been shown now for many months should continue, it will manifestly be necessary either that we buy British securities or that the British sell American ones. In the recent placing of the Anglo-French loan in this country, followed so soon by this move of the Chancellor of the Exchequer, we see both processes going on upon a large scale.

Proposals of the Chancellor of the Exchequer for utilizing the savings of workingmen for purposes of war contain some indication of the differences between the average British and the average Continental home at the present moment. He would issue bonds in multiples of one pound, bearing an interest which increased year by year until by 1920 it bore 5 per cent. The rate of individual wage throughout England, measured by purchasing power, has undoubtedly fallen, for food prices are estimated to have risen 42 per cent., and housing, fuel, and clothing are also much higher. But the absolute increase in wages is considerable; overtime is general, and extra rates are paid for it; the state allowance on behalf of absent earners is liberal; and, above all, large sections of the population once thought unfit for employment, as women and boys, now receive profitable work. To measure the first of these considerations only, the employers' returns for the textile and several other staple industries are stated to indicate a total increased payment in wages of 24.3 per cent., for an increased number of persons as compared with a year ago. The net result is that, while the existence of sporadic distress is shown by the work of relief funds, and by measures like that for relieving poor tenants of increased war rents, the average British family of the working classes must show a slender surplus at the very time that many German and French households are facing the acutest financial problems.

The original purpose of the British advance in Mesopotamia, which has encountered a severe setback south of Bagdad, was an ambitious one. While the British were pushing up the valley of the Tigris to Bagdad and beyond, the Russians were to come south from the Caucasus through the region of Lake Van, and strike for the Tigris along the stretch between Diarbekr and Mussoul. For many months it has been apparent that the Russians could not be counted upon to put through their part of the assigned task. The British, on the contrary, made progress. At first they encountered no serious resistance. Bussora, the port from which Sinbad set forth on his voyages, surrendered easily, and the British campaign resolved itself into a slow but steady advance northward along the Tigris, which was the army's sole line of communications and supply. The vagaries of the Tigris channel and the network of irrigation canals presented a peculiarly difficult problem for the large fleet of light-draught steamers and numerous native boats. This fleet has been described as "the cavalry screen, advance guard, rear guard, flank guard, railway, general headquarters, heavy artillery, line of communications, supply depot, police force, field ambulance, aerial hangar, and base of supply of the Mesopotamian expedition." By the end of September the expedition had reached Kut-el-Amarna, about 100 miles south of Bagdad and 250 miles from the Persian Gulf. There was a battle at Kut-el-Amarna, September 27-29, in which the Turks were driven from a prepared position. The pursuit must have been rapid, under existing conditions, if in two months the British were within striking distance of Bagdad. Events have shown that it was too rapid.

Between President Yuan Shi-Kai hesitating to assume the crown, and Emperor Yuan Shi-Kai accepting the crown in principle but postponing the act to a more opportune time, the difference is small. As head of the republic, Yuan Shi-Kai has been waiting for the temper of the country to show itself. As Emperor designate, he will continue to wait. Until within a few days ago it was only the monarchists who spoke out, and in a manner indicating a carefully organized campaign. The naval mutiny last week in the harbor of Shanghai is probably the first expression of sentiment from the anti-monarchists, and it is not likely that they have had their final say. Yuan's decision to postpone his formal accession until a more favorable opportunity is not a logical step from the monarchist point of view. The great argument on that side has been that the country is suffering from the uncertain state of affairs at Peking, and that only the strong hand of an Emperor can establish order. If Yuan is to wait until order has been established, the argument for a monarchy falls to the ground. For the permanent peace of China the accession of Yuan would be an unhappy thing. It would not be the end, but the beginning, of an epoch. It is not to be supposed that the progressive elements in China will give in without resistance. Yuan himself may be strong enough to defend his Emperorship. When he goes, turmoil will begin. Better for China if the strong man Yuan were to use his strength in educating his people to a free government. As it is, he may be the Porfirio Diaz of China, with results similar to those Mexico has experienced.

THE DEMAND ON AUSTRIA.

The trenchant note of our Government to Austria did not come like a bolt from the blue. It has been amply forecast, and is but a necessary step after what has gone before. Nor can it be described as a mere letting of the eagle scream, as was the famous dispatch which Webster once sent to the Austrian Government. Secretary Lansing, indeed, may be thought to have written in the spirit of Webster's words when the latter said: "Every nation, on being received at her own request into the circle of civilized governments, must understand that she binds herself to the strict and faithful observance of all those principles, laws, and usages which have obtained currency among civilized states and which have for their object the mitigation of the miseries of war." But it is not discussion of the laws of war that our Government is now inviting. Its demand is for prompt action; and this is based, not upon any sudden decision, but upon a controversy which has been threshed out for months, and to which the President now insists that a definite conclusion be put.

The note to Austria is plainly a sequel to the representations which this country has made to Germany. That is assumed. Our Government takes it for granted that Austria is fully aware of the positions laid down by the Washington Administration in its demands upon the German Government. The limits within which the United States would permit the conduct of submarine warfare, so far as it affects the lives of American citizens, had been clearly marked off. The question cannot now be taken up afresh with every other government. The American attitude is known to all the world. In that attitude, the note states significantly, Germany has acquiesced. From this two inferences are unescapable. The first is that Austria cannot be allowed to flout what Germany has decided to respect. And the second is that Germany is to be pressed for a complete and satisfactory settlement of the Lusitania case, just as she made her apologies and disavowals and promises to pay indemnity in the case of the Arabic. There is no question here of being more severe with Austria because she is weaker than Germany. The whole implication, the entire logic of the note, is that equal measure is being meted to both countries by the American Government. It has, in truth, been no secret that Secretary Lansing has been putting pressure upon Ambassador Bernstorff to wind up the Lusitania controversy. If satisfaction in that matter is not soon forthcoming, there may be a note to Germany couched in as strong language as that of the communication to the Austrian Government.

Its argument is condensed but urgent. The effect of it is to serve fair notice that the patience and long-suffering of this Government must not be interpreted as willingness to submit to injustice. In each case of submarine outrage, the President has waited long enough to be assured of the facts. He has done no rash thundering in the index. Full opportunity has been given to the other side to state its case and to determine its policy. But Mr. Wilson evidently feels now that it is time to come to business. If he holds a sharper tone in reference to the Ancona than he did with regard to the Lusitania, it must be because he believes that the argument has been exhausted, and that the Austrian Government, if it countenanced the proceedings of its submarine commander, was acting as if in deliberate contempt of the doctrines of law and humanity which our Government had made it plain that it would omit no word or act to uphold. These acts, which are abhorrent and barbarous, and which at the same time are in direct violation of American rights, cannot be tolerated merely because the scene of them is shifted, or because they are done under one flag rather than another. The imperative air of the note means that the President feels that the sum of the whole matter has long been before Austria as well as before Germany, and that the hour for a settlement has come.

It is not necessary to dwell upon the grave tenor of the note. Its terms are such as one Government rarely uses to another. Where the ordinary dispatch uses the word "request," this one plainly says "demand." And the door is shut to everything except a complete satisfaction offered by Austria. She is called upon not merely to disavow the act of her submarine commander, but to discipline him. Austria has in her time written diplomatic notes with a sharp edge to them—witness the formidable demand which she made upon Servia in 1914—but it is doubtful if she ever received one more curt and cutting than this dispatch of our State Department. That a distinct threat lies behind it is plain. But the threat does not go beyond the severance of diplomatic relations. This is implied in the phrase that the "good relations of the two countries must rest upon a common regard for law and humanity." In case the Austrian Government does not take speedy steps to satisfy the President, it is obvious that Ambassador Penfield will be recalled from Vienna. That Germany would feel herself involved in such a course is highly probable; but this fact may lead her to use her powerful influence with Austria in order to induce her ally to yield as gracefully as possible to the just demands of the United States.

GERMANY AND PEACE.

While Bethmann-Hollweg was engaged in drafting the speech which he delivered in the Reichstag last Thursday, the substance of it had been given to the world by von Hindenburg: "Our enemies are not sufficiently battered. We must hammer them some more." In the language of statesmanship this sentiment took the following form: "So long as this mixture of guilt and ignorance dominates the feelings of the hostile nations and their leaders, every tender of peace on our side would be folly." The state of ignorance referred to is ignorance on the part of the Allies that they are beaten. All through the Chancellor's statement runs this recognition of an awkward fact. The blunt habit of mind of Gen. Hindenburg puts it frankly. The diplomat expresses it circuitously and plaintively. We are victorious on every side, but the enemy does not know it. We have crushed Belgium, Servia, and Russia, and crippled France, but they unfortunately seem not to be aware of it. We have shown that Germany and her allies cannot be starved into submission, but England stupidly insists that the thing can be done. We do not need to conquer additional territory, we have obtained the fullest guarantees for our safety, but we cannot speak of peace lest the enemy interpret it as a sign of weakness. We have won, but our opponents won't let us speak in the tones of a victor.

The Chancellor thus gave the expected answer to the Socialist interpellation. Is Germany ready to take the initiative in making peace? No. "Whenever our enemies approach us with peace proposals which are in consonance with Germany's dignity and security we shall always be ready to discuss them." Is Germany ready to say what she regards as consonant with her dignity and security? No. "In previous speeches I sketched the general aim of the war. I cannot be more definite to-day, or say what guarantees the Imperial Government demands, for example, in the Belgian question." The

first step towards peace will come when the Allies have said, We have had enough. In what form must this acknowledgment come from the Allies? Here the Chancellor's statement becomes peculiarly plaintive. The Allies must renounce the destruction of Germany which they proclaimed as their final goal in "the first intoxication of hope," a goal which, "despite intermediate events, remains the same." It is hard doing business with a beaten enemy who is still determined to destroy you. There can be no approach towards reconciliation with an opponent who refuses you the guarantees which you have conquered and are in a position to hold against the world.

It is a childish argument, this insistence that the first step to peace must be a confession by the Allies that they have been naughty and a promise that they will not do it again. Peace comes not through phrases, but through facts. Mr. Asquith or M. Briand will never say to Germany, "Very well, I promise not to annihilate you," even when they have lost hope of annihilating or even defeating Germany. Nations address one another on such important matters in concrete terms. Peace can come only through the defeated nation asking what the victor is willing to take, or through the victor announcing what he is willing to concede to the vanquished.

Compared with the Chancellor's statement, the position taken by the Socialist spokesman, Scheidemann, shows a closer grasp of realities. We went into this war, said Scheidemann, to defend our national integrity. We have succeeded. Our frontiers are amply protected. Let us have peace. But Bethmann-Hollweg is under the necessity of explaining a defensive war which aims at territorial expansion, a war for self-preservation which calls for conquests. He is under the necessity of satisfying public opinion at home with the assurance that the war is won, and reconciling that cheerful view with the fact that the war is not ended, and cannot end until the Allies cry quits. In the realm of realities we know that either a nation is victorious or it is not. If it has victory, it does not weaken itself by announcing that it is willing to make peace. If it fears that such a statement will raise false hopes in the enemy's camp and prolong the war, then it has not attained victory and is not within measurable approach of it.

In the Chancellor's speech the ground-note is confidence, but there are overtones of doubt and hesitation. There are suggestions that if only the Allies are willing to swallow their pride they may find Germany reasonable. "The longer and more bitterly they wage this war against us, the greater will be the necessary guarantees." It sounds like a threat, but it is also an intimation that an easy settlement is possible to-day. Bethmann-Hollweg speaks of the necessity of establishing the certitude that war will not return. How can that certitude be established? If not through the crushing of the Allies, then it must be through reconciliation. He uses the striking words:

> I cannot say what guarantees the Imperial Government demands, for example, in the Belgian question, *or what combination of Powers seems necessary as a foundation for these guarantees.*

Is this a hint to the moderate elements in England and France that if only they begin to talk peace, Belgium will be regarded by Germany as a subject for discussion? Does the "combination of Powers" suggest that Germany is willing to enter into a league of reconciliation? It falls in with the entire tenor of the Chancellor's speech: Let the Allies own that they are beaten, and the rest is simple.

Plainly, this is not the firm tone of a victor. It indicates a state of mind which we find mirrored in influential sections of the non-Socialist German press. The *Frankfurter Zeitung*, out of a clear sky, raises the question of what is to be done with Alsace-Lorraine—as an internal problem, it hastens to say. Conditions there have been unsatisfactory during the war. Are the conquered provinces to remain as a Reichsland? Are they to be partitioned among the other German states? Are they to be incorporated with Prussia? The *Frankfuter Zeitung* favors the last solution. But in the very raising of the question, in the talk of rearrangements and consolidations, there is almost the intimation that in the process of reconstruction a strip of Lorraine might be "rectified" back to France, possibly in exchange for something else. Another writer deals with Germany as a *Weltmacht*, and suggests that Germany can become that without harming England. She can be a *Weltmacht* by being incomparably the strongest Power—in Europe.

Such expressions of German sentiment are known in the Allied countries. If Germany's position can be weakened by her offering peace, then the damage has been done already. The fact remains that peace has been formally debated at Berlin, and nowhere else, with the result that the Allies are likely to remain embedded in guilty "ignorance" of the fact, Teutonically established, that they are beaten.

OUR SUBSIDIZED PRESS.

Labor's National Peace Council is the latest victim of the subsidized press of this country. Ex-Congressman H. Robert Fowler, of Illinois, general counsel of the Association, tells us so, and he is of course in a position to know. Moreover, we find his statement set forth at length—and without denial, mark that!—in one of the subsidized newspapers themselves. "The assaults of the subsidized press upon this organization on the very day of the opening of the Sixty-fourth Congress" stir Mr. Fowler to indignant defiance, to which, as well as to the accusation itself, the subsidized press gives full publicity—and this again without a word of protest. "Neither the intimidation of the wealth of the Armor Trust and the War Trust nor the public slander of their subsidized press," Mr. Fowler declares, "will in any wise deter us or save them from the exposure of their criminal looting of the public treasury." How much of the swag goes to the newspapers and how much is to be retained by the "War Trust," is of course not indicated; but no doubt the sum that will go into the journalistic cash-boxes will make a very comfortable addition to the British gold which swung the American press almost solidly in line for the Allies at the outbreak of the war.

We have referred to Mr. Fowler's remarks as an "accusation"; but the description is not accurate. He does not feel it necessary to take the trouble to accuse; he uses the word "subsidized" as though it were a mere designation which he finds current, and which everybody will accept without challenge. And indeed it is current enough. It is at the free disposal of every one that is in distress and every one that is in debt and every one that is discontented; it is current coin in the cave of Adullam. Mr. Bryan finds it ready to his hand in each one of the successive positions in which he places himself through his deep devotion to one paramount issue after another. If almost the whole of the influential American press is opposed to the debasement of the currency, this is because it is subsidized by the money power. If it does not welcome the initiative, referendum, and recall, it is because it is in the pay of the political bosses. If it denounces Bryan's desertion of his post as Secretary of State, and the lack of honorable observance of its obligations which he displayed while filling it, this is because the press is under the thumb of the men who want to make millions out of the embroilment of the country in the European war.

We might ourselves feel inclined to be weighed down by the thought of this deep degradation of the American press, were it not for some curious facts in regard to it. Among these we should place, first of all, the extraordinary circumstance that so much free publicity is given to the charge by the press itself. As is well known to those sociological experts who have made the venality and subservience of the American newspapers their specialty, the greatest weapon of evil which they wield is that of suppression. To one word that is said by these learned gentlemen about distortion of news, or about insincerity of editorial opinion, there are ten said about suppression of the news. How comes it, then, that the newspapers spread abroad so constantly the exposure of that very suppression, and the accusation of the venality which lies at the root of suppression, distortion, and insincerity alike? That is a puzzle which it may be beyond the power of the sociologists to explain, but which ought to offer no difficulty to their friends the psychologists. Yet we do not recall having ever seen a word on the subject by either. In default of instruction from these high quarters, we confess that, for our own part, we feel constrained to fall back upon a very simple explanation. The reason that the respectable papers of this country so complacently print these charges, and take no further notice of them, is that they count on the good sense of their readers to set them down as irresponsible gabble.

There are many respects in which the American newspaper compares unfavorably with the best examples of European journalism. There is less sense of proportion, less enlistment of special knowledge in the handling of many important departments, more intentness on catching the eye of the crowd by undue "featuring" of striking or sensational, rather than truly important, items. But in point of honesty and sincerity, we have little doubt that the American press is not only equal, but superior, to that of any European country. There are exceptions, of course; but it may be said of the great mass of American newspapers of acknowledged standing that they are not only wholly free from the grosser forms of venality, but are conducted in a spirit of genuine independence. Not, as a rule, to be sure, of an absolutely ideal independence. There are personal predilections, perhaps personal affiliations, that influence the policy of the paper more or less; and there is the sense of representing, in a measure, rather than undertaking altogether to lead, the paper's constituency. From the standpoint of the labor agitator, or the social reformer, or the advocate of some ideal scheme of world-regeneration, all this may present itself in the light of a base and unworthy compliance; but as a matter of fact, the standard of the typical American newspaper of importance is not lower, but far higher, than that by which individuals, even high-minded individuals, are usually guided in their personal conduct. Let fault be found with the papers, nevertheless; they fall below their own standards often enough. But when charges of venality are made, on no better foundation than that the views of the newspaper are not in agreement with those of the accuser, they should serve no other end than that of classing the person who makes them as a cheap slanderer or a silly ignoramus.

A SIDELIGHT ON POPULAR KNOWLEDGE.

A professor in a State university of the Middle West has written to the *Nation* an account (printed in the issue of last week) of an interesting experience upon which he stumbled quite accidentally in the midst of his routine work with a section of his freshman class. They were reading Marlowe's "Hero and Leander":

> Hellespont suggested Gallipoli, and I asked the class—it was quite a chance shot—where Gallipoli was. To my surprise, no one knew. I wrote the word on the blackboard, and was amazed when the class confessed that not one had ever seen the word before!
>
> Within the next twenty-six hours I had met three other sections of freshmen, and had placed "Gallipoli" before them, with the same result. A more advanced course yielded two men who had never heard the name—one of them was on the staff of the university daily paper.

With this for a beginning, the Professor went on to sound the depths of these freshmen's ignorance by setting them a "simple examination paper" consisting of questions relating to the great war. The result furnishes such an array of ludicrous errors as one is accustomed to find displayed in accounts of such tests. Yet we have to confess that the exhibit, amusing as it is, impresses us less than the simple showing upon Gallipoli. Many persons fairly well informed about the war might fail to answer several of the questions. But the Gallipoli thing cannot be explained away. It is quite certain that these boys and girls had completed their high-school course in the midst of the greatest international convulsion of all history without taking enough interest in it to follow with ordinary attention even such accounts of it as are contained in the newspaper headlines.

It may be noticed that even in the Gallipoli matter there appears a gleam of encouragement as to the mental condition of these young people. In a more advanced class, there were only two men who had not heard of Gallipoli; whence we may infer that some development was taking place in the course of their college life. But the questions raised by the exhibition as a whole are both broader and more disturbing than those usually considered in connection with the efficacy of our colleges as breeders either of general culture or of sound citizenship. It is only a small minority, though an extremely important one, that go through college. What these freshmen represent is the youth of both sexes who at the age of sixteen or eighteen go out into life after having had the benefit of a common-school and high-school education. And it is not merely their knowledge, nor even merely their interest in the great events of the world, but their mental attitude that is represented. The professor cites some letters in which this mental attitude is explicitly displayed. One speaks of not having time "to spend looking up magazines and reading unimportant matter which does not pertain to his life's work." Another is willing to wait until "the war is over, and matters are cleared up," at which happy time he will not be bothered with the difficulty of finding out which of the alleged facts contained in the newspapers are true and which false. Small wonder that the professor indulged in some bitter comment on such notions of what is an "unimportant matter" and what our "life's work" is really concerned with.

The question of keenest, one might indeed say crucial, interest is, how far the state of mind of these young people reflects that of their elders. Is it the fact that in the small towns and villages and farmsteads from which they doubtless come the tremendous drama that is enacted in Europe, the convulsion upon whose outcome the whole future of that civilization from which our own is drawn is destined to turn, excites only the most languid and most distant interest? It would be rash to infer so much as this; but certainly something approaching it is strongly suggested. For those who are living at the heart of things in New York or Washington it is difficult to imagine such a state of mind. But even granting that it exists, one must not rush to the conclusion that these people are hopelessly sordid or philistine. If it is only in its broadest lines that the great war is known to them, we must

remember that, as has been said by an acute thinker, there is no operation that the human mind so stubbornly resists as the introduction of new knowledge. And there is lacking that poignant sense of the tremendous reality which is brought about by the contagion of constant and general discussion and of human contact.

One practical lesson bearing on a leading question of the time should be enforced by contemplation of such a phenomenon as is here indicated. We all believe in the rule of the people, but some of us have been insisting that to require that every great question shall be settled by popular vote is to reduce the principle of popular rule to an absurdity. Not the least important reason for holding this is that it takes time for knowledge of any great question to permeate the popular mind, and that nevertheless action upon it may be demanded at once, either by enthusiastic agitators on the one hand or by the force of circumstances on the other. An instance of the latter case is the issue of peace or war; of the former any number of examples might be cited. If in the hard times which gave the great impetus to the silver agitation it had been possible to refer the question of free silver to a popular vote, it is not improbable that the proposal would have been carried, and it is quite certain that the people would have voted upon it without understanding it. In such a matter as any of the issues which have arisen at the present time between this country and Germany, or between this country and Great Britain, the worst possible way to find out the final and deliberate judgment of the American people would be to refer the question to a direct vote. How few of them know enough about it to know what they would think if they knew more about it, the referendum on Gallipoli at this Western State university suffices to give an instructive indication.

STEPHEN PHILLIPS AND THE POETIC DRAMA.

We are accustomed to thinking of the poetic drama as something that in our time and language is almost non-existent. Yet in the dramatic history of the last two decades two of the chief British poets, Stephen Phillips and W. B. Yeats, have devoted almost all their energies to writing plays. Nor have they written in the spirit in which Browning and Tennyson, Swinburne and Robert Bridges, wrote their dramas in verse. Tennyson's "Queen Mary" had a slight stage success, but only after much remodelling; and no one believes that it would ever have been produced had it not been the Poet Laureate's. Phillips and Yeats rather continued, and infinitely bettered, the tradition of Taylor and Talfourd, writing with the definite purpose of being acted. If their materials and methods in writing, their purposes in seeking production, were absolutely different, the fact but illustrates the range of dramatic possibilities still inherent in poetry. Other and kindred recent experiments in poetic drama have made their mark on both sides the Atlantic, chief among them being the versions of Euripides made by Gilbert Murray, produced in successive years at the Court Theatre in London before being brought to America. There have been English translations of Maeterlinck, Hauptmann, and Rostand which had the spirit of poetry, if not its form, and which have held their audiences; and in recent years the pageant and the masque, the superior forms of which are always poetic, have had extraordinary vogue in England and America.

But to Stephen Phillips is due special gratitude as the first English writer in years to show the possibility of producing beautiful poetry, and yet of attending to the technical requirements of the stage. His "Paolo and Francesca" was not equalled in definition of character, tragic passion, and skilled handling of intense action by his later works. He tended to substitute magnificence for actual dramatic movement to a degree that smothered even the poetry in stage presentation. In "Ulysses" the poetry had only a coördinate place with a series of fine tableaux, and in "Nero" the splendor of the settings and the frequency and pomp of the entrances made it wholly subsidiary, while dramatic outline was blurred. But not only were the "Herod" and the "Sin of David" adapted as wholes to the stage, but they and his first play had individual scenes of unusual dramatic merit. The two love scenes of "Paolo and Francesca" are among the most beautiful of their kind in all contemporary drama. Phillips had a certain stage experience during his connection with Benson, and he also worked to the order of influential managers, and was to some degree guided by their ideas. Yeats, similarly, wrote with the requirements of the Irish National Theatre, of which he had partial control, in mind. In Yeats, also, the full possibilities of poetic drama are not revealed. His "On Baile's Strand," despite its Sohrab and Rustum theme of father fighting son, is not dramatic, and neither "Deirdre" nor "The Shadowy Waters" has anything like the fine stirring appeal of the prose "Kathleen ni Houlihan." But both, to a far greater degree than Percy MacKaye in "Jeanne d'Arc" or "The Canterbury Pilgrims," or than writers like Margaret Woods, have shown that there may be realized an English poetic drama.

If Phillips's sense of dramatic requirements was such that early critics accused him of merely giving a poetic handling to old-fashioned melodrama, he merits credit also for offering his actors verse of simple character, its rhythm obvious, and its accent and emphasis much plainer than the Elizabethans. A poetic drama must not differ too markedly in speech from one in prose. Mere declamation, the loading of the action with meditative and moralizing verse in Joanna Baillie's vein, will not do. But there is no reason why the recitation of poetic dialogue should not treat it as poetry, should not bring out its values of rhyme and rhythm. Our want of actors who can speak a scene from Shakespeare with real feeling for blank verse is one reason why the public does not oftener respond to Shakespearean revivals. At one of Granville Barker's performances of Euripides a critic complained that in the opening scene the actor not only concealed from him the fact that the lines were written in rhymed verse, but convinced him that they were not. There may be a division among elocutionists over the propriety of accenting or evading rhythm. But it is certain that the mass of people who make up the potential audiences of poetic drama wish to hear verse read with delicate but perceptible appreciation of the fact that it is verse.

Of the prospects of poetic drama it is possible to say little, because production must always depend upon the occurrence of dramatic faculty and taste in some man poetically endowed, and outer circumstances little control that occurrence. But it is hopeful to find signs that the poetic drama, if well done, may have a more cordial reception in the future than it has had in the past. The war in particular has brought forward a general view that cynicism and ultra-scientific realism were alike becoming distasteful, and that in their place idealism, romanticism, and those things that appeal to the emotions were certain to be in demand. Only the event can test this view, but many theoretical reasons give it force. If it actually proves that emotion and romance have a new place in popular taste, they are sure to find it in some fashion on the stage. But the believer in poetic drama would contend that its place is permanent, and that human nature's liking for it is little affected by changes such as even a great war may bring.

Foreign Correspondence

THE FAILURE OF THE CHINESE REPUBLIC.

By YONE NOGUCHI.

TOKIO, November 7.

Many people, I believe, endorsed the Chinese Republic from their idea that democracy, even Whitman's golden democracy, in fact operated under the autocratic form of government in old China. It is true that the philosopher Menclus, for instance, who placed the people first, the gods second, and the sovereign third in the scale of national importance, replied, when asked if a subject were justified in putting his sovereign to death as in the case of an ancient wicked emperor who was attacked by a patriot and subsequently perished in the flame of his palace: "Any one who has violated man's natural charity of heart and failed in the execution of duty towards his neighbors is only an unprincipled ruffian; it was such a ruffian in truth, not an emperor in the real sense of the word, who perished in the case under discussion." But you should spend a thought or two before you take such language (which would sound quite wild from the lips of a reckless Western anarchist) as evidence of the existence of democracy as the fruit of human aspiration; it would be more reasonable to take it as casting a light over the conditions of those days, when the ruling classes were obliged to assume a democratic or liberal attitude, having before their face the eternal problem of pacifying the subdued race, Tibetans or Tartars. The long Chinese history is merely a record of struggle between the conquerors and the conquered; if there was democracy in the old Chinese mind, it was not from passion or love, but from necessity, therefore from reasoning or cold justice-making. I secretly entertain even some suspicion in reading the word "democracy" in ancient Chinese books, that it might be a proof how little democracy existed then in fact. Suppose the people in China quite well cherished a democratic conception. Then how shocking to read of their contentedly living under the tyrannical laws which were at one time or another imposed upon them. I can say that democracy may have been an ideal of old China; but it had no immediate relation, I dare say, with the establishment of a Republic as in present China.

Unlike Japan, whose insular safety, combined with a strange devotion to an emperor, dulled the edge of ambition to complete a home-loving people, China has furnished from time immemorial the most romantic field for a man of undaunted heroic nature to build at the place where the sword was sharpest. We have one Chinese saying that there is no special kind of man born to be a king or a prince or a general; that means that anybody may be the sole creator of his own destiny. Among the most ambitious fighters who contested the Imperial throne is a self-made man of peasant origin called Liu Pang, who originated the Han dynasty, when the once powerful dynasty of Ts'in (the first Emperor of that dynasty successfully unified the Chinese domain in B. C. 222) began to collapse from the impossibility of digesting what it had conquered. The Empire under the Ts'in dynasty, to believe one historian's affirmation, extended "from the plains of Yen and Chao [the modern Ho Nan and Chih Li] to the banks of the Yang-tze and the hills of Yueh [the modern Che'h Kiang], and from the Lake of Tungting to the Eastern Sea." The founders of the great T'ang and the Sung dynasties, although the former particularly was, even from a Western point of view, a gentleman and a soldier, were not backed by any august family history. How the best blood of those days was spilled against the northern savages will be seen from the following verse by Li Po:

> Under the crescent moon's faint glow
> The washerman's bat resonnds afar,
> And the autumn breeze sighs tenderly.
> But my heart has gone to the Tartar war,
> To bleak Kansul and the steppes of snow,
> Calling my husband back to me.

Who established the Ming dynasty? He was nobody but a priest returned to secular life. And in the Manchu dynasty we read the conquering history of unlearned intruders from the north whom China despised, comparing them even with "birds or beasts." It would be reasonable, even proper, for the masses of the people, under such an endless change of Emperors and dynasties and the general disturbance, to think of their own safety first; who will blame the Chinese if they became, as they did in fact, self-centred and materialistic? Confucius emphasized in his teaching man's duty to his neighbor and his loyalty to the sovereign as the foundation-stone of national prosperity; he taught filial piety and virtue for virtue's sake and not for the hope of reward or fear or punishment. He attempted already in his days to rescue the people from the thought of themselves alone. The self-seeking of the Chinese and their general lack of public spirit (I do not speak of patriotism in the Japanese sense) have such a long history. During those thousand years they learned perfectly the blessing of ignorance under whose protection they thought they found their safety; in China only one will find such a proverb or saying: "To learn letters or books is the beginning of your sorrows." What recked such a people if the form of their government were a republic or a monarchy? For them, it is not too insolent to say, the beautiful forms of a republic were certainly, to use a Japanese common phrase, "a piece of gold to a cat"; and perhaps they feel under no obligation to the present Chinese Republic since they draw no benefit from it. The republican form of government is nothing if the people's pain and joy are not embodied in it; and since the Chinese Republic is a thing merely written up by a handful of young men who studied perhaps in New York or Tokio on the table, but not in the people's living bosoms, it is as irresponsible as a mirage in the high sky. So long as the masses can keep their own physical safety, they would not care if Yuan Shi-Kai should proclaim himself, as did Liu Pang, of the ancient Han dynasty, as the very Prince of Han beloved by Heaven. Doubtless he had many reasons and circumstances for introducing the western republic in China; but he was mistaken if he thought that this advanced form of government, the fruit of people's real awakening to responsibility of life and the world, could be planted in so barren a land as China. The Chinese conservatism is far more obstinate and hard than that of Englishmen; we have seen many examples that they never take up (indeed quite unlike Japanese) any new thing on the spot, even when it is good and proper.

A discriminative mind will soon find that one of the principal reasons for the fall of each dynasty in China was the neglect to create a centre of inspiration which might consolidate the national mind, and the leaving of the country to expend her energies in selfish indulgence; but some wise emperors and imperial advisers who had the wisdom of reflective foresight used Confucius's name to advantage, and made Confucianism a sole guide to life and the world, a philosophy around which the nation might weave a web of compactness and harmony. When Yuan Shi-Kai practiced the ceremony of the so-called Heaven-worshipping last autumn, it was from his desire to gain spiritual consolidation through the power of Confucianism; but what a contradiction as the act of a president of a modern republic! What such an action tells, is that Yuan found it impossible to unite the Chinese mind in one compact whole, and had recourse to an uncertain divine protection. We read in books that many an emperor or, so to say, son of Heaven, of olden days, proceeded once a year to the Temple of Heaven in the Capitol, and after due performance of sacrificial worship, entered alone the central raised building, there placing himself in communication with the Supreme Being who might reveal to him how to manage the affairs of state. Chinese records, I read somewhere, go so far as to mention letters received from God. This may be taken to mean that the emperors, when they were wise, tried to show to the people that they were solicitous of the well-being of all committed to their care; to use the well-known phrase, the Emperors made their own minds one with the people's mind. What use of the Heaven-worshipping ceremony when, as to-day in China, the masses have utterly lost the spirit of devotion? I have many reasons to say that Yuan Shi-Kai as Emperor, but not as President, might make the country more straightforward in conduct, and more compact in her life. In a country like China, where the high officials seek only their self-interest, while the masses are unconcerned for the country's destiny, the question first and last is, "Who will be at the head of the managers of the country?" Let Yuan become a fully accredited Emperor and conduct the national affairs with his own strong lieutenants, whoever they be.

RICHARD NORTON'S AMBULANCE.

By JAMES F. MUIRHEAD.

LONDON, November 30.

Among the more cheerful and gratifying features of a very dismal situation must be ranked the numerous instances of practical sympathy shown to Great Britain and its allies by individual citizens and organizations of the neutral lands; and it has already been my pleasant task to chronicle in the columns of the *Nation* some American cases of this kind. None of them, perhaps, deserve more cordial recognition or are more remarkable in their conception and execution than the services rendered to the Allies by the American Volunteer Motor-Ambulance Corps, the only American organization of any kind that has succeeded in reaching the front. The credit of being the "only begetter" of this organization belongs to Mr. Richard Norton, who, both on account of his happy inspiration and his successful achievement, now at least (if not before) has assuredly earned the right to be styled the distinguished son of a dis-

tinguished father. Mr. Norton, during a visit in France at an early stage of the war, had become painfully aware of the great suffering caused by delay in bringing in the wounded to the hospitals provided for them; and he then and there felt the "call" to devote himself to minimizing this evil so far as lay in his power. His first natural wish was to minister to the men of the same blood as himself, and he accordingly offered his services to the British Red Cross. He had, however, previously applied for support to his American friends, who responded generously in money, in cars, and in personal service as chauffeurs, so that his original application to the Red Cross was firmly based on a fleet of ten motor vehicles of one kind or another.

The British Red Cross and the St. John's Ambulance Association were most cordial in their furtherance of Mr. Norton's scheme. Mr. Henry James accepted the office of chairman of the company, and it is impossible to exaggerate the value of his unobtrusive services in this capacity. Probably no other name would have been so efficacious in obtaining the sympathy needed for the success of the corps; and it is perhaps not the least valuable feature of his aid that his pen made the circulars of the organization real contributions to literature. A little later the corps was amalgamated with the Anglo-American Ambulance and incorporated under the company acts of 1907 and 1913, with the certificate of the Board of Trade.

The corps, being accepted as one of the units of the British Red Cross, was of necessity placed under the command of a British officer, Col. A. J. Barry, R. E., with whom Mr. Norton, also wearing the khaki uniform of the Red Cross, was associated as deputy commandant and convoy leader. In the first instance, however, the corps was lent to the French military authorities, whose immediate need for this form of service was more urgent than that of the British forces; and it began its work in October, 1914, behind the French lines. For six months the work here went on very satisfactorily, with most beneficial results to the French wounded and with a constantly augmenting number of ambulances. In March, 1915, the Red Cross Society intimated its desire that the corps should return to Boulogne and take up work with the British army. The Commissioner, Sir Arthur Lawley, readily yielded to representations that it seemed hardly fair to leave the French army, for which the corps had been operating, so suddenly in the lurch. The result was that Mr. Norton, trusting to the generosity of his American and English friends, decided to double the corps, so as to leave the French unit undiminished while responding to the British summons. As a matter of fact, however, the British demand was, for various reasons, not persisted in, and for the moment the fine fleet of sixty cars is operating with a certain French army corps, of which the entire ambulance service has been placed under the control of Col. Barry and Mr. Norton. This expansion of the activity of the corps has had as one result the inclusion of a number of English volunteers in its strength, a feature which all the Americans interested in the service regard with great satisfaction.

The main function of the corps is to gather in the wounded from the *postes de secours* and field hospitals, and to convey them as speedily as possible to the base hospitals or (when practicable) to the railway stations. When the roads permit of it, the ambulances sometimes get very near the trenches and they are often under fire. By great good fortune only one car has so far been injured by shells, and no members of the staff have been injured, though several have had hairbreadth escapes. Such minor inconveniences as spending the night in or below the cars, the facing of asphyxiating gas in masks, the going for days at a time without a moment to change one's clothes, and work carried on at critical periods without rest or sleep for incredible intervals are all accepted as necessary and ordinary features of the service. For details as to the experiences and adventures of the corps, the reader must be referred to the various reports published by the corps, copies of which may be obtained from Mr. Eliot Norton, 2 Rector Street, New York. The chronicles of the heroism of the wounded, whether they are stretcher cases or *blessés assis;* of the courage and devotion of the doctors, *brancardiers,* and chauffeurs; of the help rendered to destitute refugees, and of its frequent opportunity to ascertain and preserve the identity of the dead make extraordinarily interesting reading. Some idea of the extent of the corps' activity may be gathered from the fact that it has altogether carried 28,000 cases (6,000 of these between September 25 and September 30), and has covered 12,000 miles within a single week.

Mr. Norton speaks in the highest terms of the work and spirit of his assistants, among whom may be mentioned Mr. Arthur F. Kemp and Mr. William P. Clyde, both of whom were members of the first expedition; Mr. Allen D. Loney, the well-known sportsman, whose chivalrous death on the Lusitania we all remember; Mr. Julian Day, now on active service as a lieutenant in the West Kent Yeomanry, and Mr. William R. Berry, the archæologist. Mr. Norton himself had already shown his capacity as a leader of men in his various archæological explorations, and this quality has been very evident in his present task. Seldom has so sympathetic and so compassionate a nature been conjoined with such admirable, practical, and administrative faculties. Even this brief sketch indicates how much tact must have been called on to steer this scheme successfully through the technical and other difficulties inseparable from its points of contact with three different nationalities and at least as many military and quasi-military organizations; and Mr. Norton's successful handling of his helpers and subordinates has been as striking as his diplomatic talents in dealing with his subscribers, his backers, and his superior authorities.

Several members of the corps were mentioned in the orders of the day of the Corps d'Armée after the recent serious fighting. Mr. Norton, who had already received the *Croix de Guerre,* was cité à l'ordre de l'armée in the following terms: "Richard Norton, adjoint au Commandant de la Section Sanitaire Anglo-Américaine pendant les combats du 25. Sept. et des jours suivants a fait preuve du plus grand dévouement et du plus beau courage, en conduisant lui-même ses voitures de jour et de nuit dans les zones dangereuses et en donnant à toute sa section l'exemple d'une endurance poussée jusqu'à l'épuisement de ses forces."

The corps is treated exactly as a French military corps, has to obey the same regulations and officials, and receives the regulation army rations (described as "extremely good"). It is being more and more absorbed into the French military system, and a reorganization is now in prospect which will definitely divide it into reserve sections and sections for work at or near the firing line.

The corps has been most generously supported both by American and English friends. Among the most liberal of the former are Mrs. Frances M. Wolcott, of Buffalo, and Mr. Alexander Smith Cochran, of New York. Its chief need at the present juncture is the services of trained chauffeurs.

FRANCE'S COLORED TROOPS.

By STODDARD DEWEY.

PARIS, November 28.

I wonder what natives of Boston think of the outcry against France that she is using colored soldiers. They used to be proud of St. Gaudens's monument to Col. Shaw and his regiment—the first colored regiment raised in our Civil War. Now there are colored men of the French colonies of Africa whose country is organized into settled communes and who can vote for members of Parliament—and yet they are not so far subject to military conscription. They who have the right to vote should surely have the right to fight.

These darker children of France have not shown themselves backward in offering themselves for military service in defence of what is also their country. They are not all colored in our American sense. There are Arabs of Tunis and Algiers and Kabyles or Berbers as well as Senegalese. All have shown their attachment to the country where they and theirs are well—*ubi bene, ibi patria.* An aged mountaineer on the Algerian frontier, at the beginning of war, brought his eighteen-year-old son to the recruiting office:

"I wish him to go and fight the Germans since they are your enemies. The French have done good to us—we are better fed and better clothed than we used to be. If I were not too old, I would go with my boy."

In Tunis certain classes of natives have already been subject to military service like the French themselves. Sharpshooter reserves, who were not long back from a Moroccan campaign, came trooping in at the first first sign of mobilizing, with the Morocco medal and little military book which shows the civil status and military service of each soldier carefully wrapped up in their handkerchiefs. In their broken French all spoke of France as if she were a person well beloved: "To-morrow to France—to defend our France."

The day war began, on the 3d of August, a battalion of these African sharpshooters was ordered to France from Kenifra, a storm point of South Morocco. A few miles on their march they were attacked by thousands of Moorish marauders who must have been set on them—so the men thought—by some of the German emissaries abounding in Morocco. Many dressed their own wounds for fear the doctor might keep them from going on. One of the dying murmured: "Allah did not wish me to see France!" In a month's time they were at Compiègne, and within four hours were facing the German front in battle. At Lassigny one African section held out twenty-four hours against a German battalion. A Mussulman lieutenant was asked how his men could stand up so long against enemies more numerous and violent. He said: "Our Arabs fight as if in a dream!"

In his picturesque language he explained that the bullets came at them like beans

thrown against a wall—"we were the wall." He was shot through the hips and crawled into a little trench. There he found one of his men—a fellah of Kairouan, that closed city of Mohammedans on the desert's edge. The poor Arab was dying, and in life he had known only want and privation, but he found strength to murmur: "Lieutenant, you will see Paris again, where the pretty ladies gave us flowers and chocolate." There, for the first time, he had tasted such a luxury.

The lieutenant lay paralyzed nearly a day when he heard voices. Holding his revolver ready, he resolved to sell his life dearly. But it was the French stretcher-bearers looking for the wounded, and he wound up in the Sisters' hospital at Rouen. He could not cease marvelling that German wounded should be cared for beside him. One of these Germans, a rough common soldier, in a fit of discontent threw his bowl at a Sister's head—and a swarthy Mussulman all but strangled him for disrespect to a "maraboute." No one need fear that African Mussulmans will recognize the German Emperor's "old God."

Here at Paris I pass daily the Hospital of the Mussulman's Friends under the sign of the Red Star. Shining black Senegalese, with bandages round noses or other impossible parts, show their white teeth and seem to enjoy treatment and convalescence. One, almost a giant, acts as general shepherd dog when the little French nurse takes her boyish charges out for a bit of walk in the neighboring park. These Senegalese are genuine blacks, and they have done themselves credit all through the war—good soldiers, good fellows. They, too, merit the eulogy which an officer of twenty-five years' experience gives to the "Turcos" who fought with him in Madagascar and Indo-China, in Morocco and now on French soil against Germans: "When well commanded, the Tunisian and the Algerian, the Kabyle and the Moroccan, are admirable soldiers. We must cry it aloud—France owes a great debt to them."

The brilliant success of the French in handling such soldiers is largely due to something entirely wanting to Germans in their dealings with subordinate races. It is something which even the Englishman's fair play does not altogether supply. It is the hand-to-hand comradeship of officers and men.

A superior officer of the sharpshooters was lately back in Tunis on some military errand and was walking through the city with a chief civil official of the Regency. In the Arab crowd he suddenly espied one of his young soldiers who had been wounded by the Germans and was hobbling painfully along on crutches. He pushed forward and, regardless of the curious onlookers, put his arm around the man: "Abib! so this is what those savages have done to you. Tell me all about it." The Turco wept with joy and affection, and the officer, leaving the civilian, led him off to lunch with himself. It is the same with the Senegalese. French discipline and, most of all, French officers treat them as human, and human relations start up between them. And in this war France is reaping the fruits of her humanity.

There is a curious mixture of antique races as well as shades of color among these African troops of France. The Kabyles have been thought by some to be of the original Egyptian family which spread all along the North African coast. One thousand of these farming mountaineers were brought last July to the great grain region of the Beauce to help in the harvest, and, in spite of misgivings, they were a success. Next year, when the need of harvesters may be still greater, perhaps 50,000 of these strong, faithful workers will be at the haymaking, reaping, and vintage in France. They were paid a dollar a day, which was riches—and they were worth it. Like all the others, they take back with them a veritable education. They were cheered and managed by five old under-officers of their race from the African troops. Jews of extremely ancient settlement in Africa have also made their way in the army—though they remain less military than their neighbors.

If the war continues, next spring may see a determined effort to profit by these military resources of France, which should easily furnish 700,000 soldiers. The great difficulty is to find the under-officers, for on them will always depend the efficiency and contentment of the men. Four sons of former African kings are now lieutenants in the field, one at the Dardanelles. There are already something more than 60,000 soldiers in the mêlée. Charlerol and the marshes of Saint-Gond, the cold, damp banks of the Yser and Soissons, and the fields of Artois have seen them, as the Duke of Wellington saw Irishmen whom Britons called "allens," do their duty.

One of the First Senegalese Regiment—a student of a French college—writes from the hospital where he is healing his wounds: "Next spring we blacks will give our lives again and show we are worthy to fight beside our white brothers for the defence of France. If I have been able to be somebody in my country, it is owing to the lessons of my French masters."

Notes from the Capital

JOHN LIND.

John Lind's tilt with Henry Lane Wilson, whatever the merits of the incident out of which it grew, was characteristic in its way. Lind has always been so noted for his freedom of speech, extending to a point which his critics called license, that there was an outburst of astonishment in Washington at his designation, soon after President Wilson entered the White House, to a quasi-diplomatic mission in Mexico, till the discovery was made that the direct responsibility for his choice lay at Mr. Bryan's door and not at the President's. Bryan said then that they wanted a man for their local observer in Mexico who had independence of judgment. Lind certainly has that, though his independence sometimes carries him to wise results and sometimes to foolish. In the latter category most intelligent Americans now would place his desertion of the sound-money cause for the silver free-coinage phantom in 1896; but Bryan profited by that, and doubtless holds to a different opinion of it from the mass of his fellow-countrymen.

Lind is a Swede by birth, a rather tall, very angular and ungainly blond man, with the spare habit and bony face of his type. He attracted no particular attention during his first service in the Fiftieth Congress as a Republican Representative from Minnesota; but the newspapers found him of some interest when, in the Fifty-first Congress, he served on the select committee that investigated the Civil Service Commission. His habitual seriousness never forsook him, though there were not a few humorous features in the course of this inquiry which aroused the mirth of his colleagues. He would sit tilted back in his swivel-chair, toying thoughtfully with a penholder in the sound hand resting on the table before him, and looking, from under brows a trifle lowering, straight at the witness on the stand for the moment. He seemed more impressed with the frequent interpolations of Commissioner Roosevelt than with the formal testimony of the other witnesses, but took no part in the examination of anybody beyond the suggestion of an idea here and there which was half comment and half question, and always pretty sharp.

Wilson is not the first person who has called Lind to account for his plainness of expression regarding matters involved in the foreign relations of the United States. In the midst of his term as Governor of Minnesota, the Boer War having broken out, he made a speech in which he declared: "England has bullied, she has robbed, she has oppressed for generations, for centuries. To-day she is despised by every self-respecting citizen in the world. Why, think of it, my friends! The Orange Free State, that noble little republic on African soil, was the first and only country in the world to copy our Constitution and make it its fundamental law, word for word, letter for letter; yet we stand idly by, not willing even to utter a word of protest against its annihilation from among the nations of the world." This drew from the British Vice-Consul at St. Paul a vigorous address to a gathering of English residents of that city, in which he denounced Lind as a blatant politician who, in proclaiming his sympathy with the Boers, was prostituting his office for votes. For a little while the yellow press in the Northwest tried to work up this clash into an international incident; but the Federal Administration refused to get excited over it, and all the agitation died down when it was learned that the Vice-Consul was an American citizen, with as good a right to speak his mind about Lind as Lind had to speak his about anybody else.

His insistence upon his freedom to express his opinions and criticise the conduct of others at such times and in such terms as best suited him contrasts oddly with Lind's own behavior towards an editor of the St. Paul *Dispatch* whom he held accountable for some rather violent strictures on his Administration as Governor which had appeared in that journal. He nursed his grievances quietly till his term had expired, and then walked into the editorial office and knocked his victim down twice, with an accompaniment of language which left no possibility of doubt as to his state of mind. The editor, curiously enough, adopted on that occasion, in extenuation of the offence of which Lind accused him, a line of argument not so very unlike that with which Lind recently waved Wilson aside, but Lind treated it as a subterfuge and declined to be moved from his purpose of vengeance. Doubtless, when called upon by Wilson to affirm or deny the statements imputed to him, Lind felt somewhat like that other Scandinavian of whom the story is told that he offered himself in marriage to a young woman, and was afterwards reproached by her for no longer caring to talk to her as usual. "No," he answered, "ah tank dey ban too much said alretty!"

TATTLER.

Walter Bagehot

By FREDERIC J. WHITING.

Joubert reminds us that beauty and light are necessary to a proper exhibition of truth. Be profound with clear terms and not with obscure terms, he exclaims. As one goes deep into things, one must keep a charm, and one must carry into the dark depths of thought "the pure and antique clearness of centuries less learned than ours, but with more light in them." In his pure and antique clearness we find Walter Bagehot's distinguishing trait. He had a consuming passion for realities: with him ideas were merely the intellectual equivalent of facts. One is so constituted by virtue of an experiencing nature. As he himself says, it is not enough to have opportunity, it is essential to feel it. Some occasions come to all men; but to many they are of little use, and to some they are of none. Of Shakespeare he writes:

It may be said that Shakespeare's works could only be produced by a first-rate imagination working on a first-rate experience. It is often difficult to make out whether the author of a poetic creation is drawing from fancy, or drawing from experience; but for art on a certain scale the two must concur. Out of nothing, nothing can be created. Some plastic power is required, however great may be the material. And when such works as "Hamlet" and "Othello," still more, when both they and others not unequal, have been created by a single mind, it may be fairly said that not only a great imagination, but a full conversancy with the world was necessary to their production. The whole powers of man under the most favorable circumstances are not too great for such an effort. We may assume that Shakespeare had a great experience.

This gives us as clear an insight into Bagehot as into Shakespeare. From the same pen came "Economic Studies," "Lombard Street," the editorials in the *Economist*, "Physics and Politics," "The English Constitution," "Literary Studies," "Letters on the French Coup d'Etat of 1851," "Biographical Studies." Yet each embodies the "whole powers" of the man. It cannot be said that one represents more of Bagehot than another. He was not, as some have supposed, an economist given to frequent excursions into the far country of literary criticism; he was the embodiment of remarkably acute powers of observation and reflection working on multifarious and sharply diversified experiences. He was not more interested in the state of English bank reserves than in the insoluble problem of the mind of William Cowper, and he was as competent to discuss the one as the other. Though he may isolate a subject for the purpose of scientific or literary criticism, it nevertheless remains a part of his intellectual landscape, and its whole claim upon his attention springs from that fact. The play of human emotions fascinates him, whether in Lombard Street, the Tuileries, or the study of Arthur Hugh Clough, and he brings equal wit and imagination (if we may divorce two things so inseparably one) to bear upon each.

Some difference of opinion exists as to the wisdom of republishing *in extenso* what Bagehot wrote. An English critic said the other day that the collection of everything that Bagehot ever wrote did not excite his gratitude. Contrast this with Lord Bryce's letter of October 2, 1877, to R. H. Hutton: "If some of his earlier writings are, as I fancy, out of print, might it not be well to have them reissued, and would there not be, out of his letters or ephemeral articles, many that ought to be printed and would have a permanent value? His study-sweepings were better than most men's labored works." Probably most persons familiar with Bagehot will agree with Lord Bryce. It was his letter which first suggested to Hutton the idea of republishing the "Biographical and Literary Studies." Until now, however, the only uniform edition of Walter Bagehot's writings in existence was one published in 1889 by the Travelers Insurance Company, of Hartford, Conn., which was issued, at a nominal price, as a "souvenir." This was a notable feat for more reasons than one. Above all, it insured for Bagehot's writings the careful editing which they had so long needed. He was, as his best friends are not slow to admit, a very careless writer and proof-reader. Mr. Forrest Morgan, whom the insurance company selected as editor, evoked the admiration of Leslie Stephen, who wrote of his efforts:

Mr. Forrest Morgan labored upon Bagehot's text with a zeal unsurpassable by any editor of a classic. Bagehot was either incapable of correcting proofs or calmly indifferent to errors; his pages bristle with misprints and grammatical solecisms; he mangled quotations so strangely that it is difficult to explain how he contrived to do it, and, as he rarely gave references, the task of identifying and correcting was very laborious. Mr. Morgan's zeal was equal to the difficulty, and a British author again owes to an American the first performance of a valuable service.

"The Works and Life of Walter Bagehot"* which Mrs. Russell Barrington has just issued contains much that was missing in the American edition, and is peculiarly interesting, not merely because she was his sister-in-law, and consequently had access to facts and correspondence denied to others, but also because of a faculty which she frequently displays of catching and succinctly exhibiting the fundamental characteristics of Bagehot.

I.

Walter Bagehot was a West Countryman. For several generations the Bagehots had dwelt at Langport, a small ancient town on the River Parret, in the centre of that part of England which narrows between the Bristol and the English Channels, before it again widens out into Devonshire. It is quite unique. Viewed as a town, it is tiny, and the inhabitants do not now number eight hundred. Yet it cannot be called a village; it has a market. Its importance in history and its commercial prosperity are the results of its being the first ford from the mouth of the River Poiret. Two hills rise out of the moors half a mile apart. One of these was formerly covered by the ancient town of Langport, a crowded mass of houses, within fortified walls, interlaced with narrow alleys and crowned by a grand early perpendicular church, built on the site of a yet earlier Norman church. The opposite hill, Herd's Hill, is crowned by a group of huge elm trees, whose rounded masses of foliage rise with stately effect against the western sky. Between the two hills runs the present street of Langport, which dates back some centuries. One end is called Bow Street, the other Cheapside. In this street was Bank House, where Walter Bagehot was born. On the hill, in the direction of the church, stands Hill House, the residence, first, of the ancestors of the Bagehots, and subsequently of the Stuckey family from about 1750 until ten years ago.

About the year 1772 Samuel Stuckey founded the Somersetshire Bank, at Langport, which in time spread over the entire country, and eventually became the largest private bank of issue in England. In 1909 Stuckey's Banking Company was amalgamated with Parr's Bank.

Samuel Stuckey's niece married Thomas Watson Bagehot, who was for thirty years managing director and vice-chairman of Stuckey's Banking Company. Walter Bagehot, born February 3, 1826, was their child. Mrs. Bagehot was a very pretty and lively woman, who had, as Hutton tells us, by her previous marriage with a son of Dr. Estlin, of Bristol, been brought at an early age into an intellectual atmosphere, by which she had greatly profited. Dr. Prichard, the well-known ethnologist, was her brother-in-law, and it is more than likely that Walter Bagehot's marked taste for science was first awakened in Dr. Prichard's house in Park Row, where he often spent his half-holidays while he was a schoolboy in Bristol. It is conceivable that to Dr. Prichard's "Races of Man" may be first traced that keen interest in the speculative side of ethnological research which Bagehot displays in his work on "Physics and Politics."

Walter Bagehot was entered at University College, London, in 1842. Oxford and Cambridge were debarred to him, owing to the fact that his father was a Unitarian and objected to the doctrinal tests which were then required of the undergraduates at the older universities. Apparently Bagehot had no occasion to regret this choice, for fifteen years later he wrote, in his essay on Shelley: "A distinguished pupil of the University of Oxford once observed to us: 'The use of the University of Oxford is that no one can over-read himself there. The appetite for knowledge is repressed.'"

**The Works and Life of Walter Bagehot.* By Mrs. Russell Barrington. 10 vols. New York: Longmans, Green & Co.; $25 net.

Bagehot was a great reader. Poetry, metaphysics, and history were his favorite studies. He was a good mathematician, and is said to have come very much under the influence of Professor Long, who was a learned and accurate student of Roman law. He took his bachelor's degree, with the mathematical scholarship, in 1846, and his master's degree in the University of London, with the gold medal in intellectual and moral philosophy and political economy, in 1848. His college life was nearly contemporaneous with the life of the Anti-Corn Law League and the agitation in favor of Free Trade. Bagehot was strongly influenced by Cobden, seldom missing an opportunity to hear him speak. On leaving the University he read law, and was called to the bar in the autumn of 1852.

In 1851 Bagehot spent some months in Paris and had a chance to study the *Coup d'Etat*. The seven letters which he wrote on that event shocked the sensibilities of Englishmen. In 1851 a number of young Unitarians undertook to help for a time in conducting the *Inquirer*, the chief organ of the Unitarian body. Laurence Hutton was one of these. J. Langton Sanford, afterwards the historian of the Great Rebellion, was another. Hutton says: "Only a denomination of 'just men,' trained in tolerance for generations, and in that respect, at least, made all but 'perfect,' would have endured it at all; but I doubt if any of us caused the Unitarian body so much grief as Bagehot, who never was a Unitarian, but who contributed a series of brilliant letters on the *Coup d'Etat*, in which he trod just as heavily on the toes of his colleagues as he did on those of the public by whom the *Inquirer* was taken." Briefly, he eulogized the Roman Catholic Church, supported the Prince President's military violence, attacked the freedom of the press in France, maintained that the country was wholly unfit for true parliamentary government, lauded Louis Napoleon himself, asserting that he had been far better prepared for the duties of a statesman by gambling on the turf than he would have been by poring over the historical and political dissertations of the wise and the good. It was not to be expected that such doctrine would be swallowed across the Channel. Crabb Robinson, for example, in speaking of him to Hutton, used ever afterwards to describe him as "that friend of yours—you know whom I mean, you rascal! —who wrote those abominable, those most disgraceful, letters. I did not forgive him for years after."

Yet beneath the reckless cynicism of "The Letters on the Coup d'Etat," so different from the moderation of Bagehot's later years, was a great amount of shrewd sense and profound political philosophy. It is here that for the first time we get a view of one of his most deeply rooted theories, namely, that free institutions are apt to succeed best with a stupid people. He writes, for example:

I see you are surprised. You are going to say to me, as Socrates did to Polus, "My young friend, of *course* you are right, but will you explain what you mean, as you are not yet intelligible?" I will do as well as I can, and endeavor to make good what I say, not by an *a priori* demonstration of my own, but from the details of the present and from the facts of history. Not to begin by wounding any present susceptibilities, let me take the Roman character, for, with one exception—I need not say to whom I allude—they are the great political people of history. Now is not a certain dulness their most visible characteristic? What is the history of their speculative mind? A blank. What their literature? A copy. They have left not a single discovery in any abstract science, not a single perfect or well-formed work of high imagination. The Greeks, the perfection of human and accomplished genius, bequeathed to mankind the ideal form of self-idolizing art; the Romans imitated and admired. The Greeks explained the laws of nature; the Romans wondered and despised. The Greeks invented a system of numerals second only to that now in use; the Romans counted to the end of their days with the clumsy apparatus which we still call by their name. The Greeks made a capital and scientific calendar; the Romans began their month when the Pontifex Maximus happened to spy out the new moon. Throughout Latin literature this is the perpetual puzzle—why are we free and they slaves?—we prætors and they barbers? Why do the stupid people always win and the clever people always lose? I need not say that in real, sound stupidity the English people are unrivalled. You'll have more wit, and better wit, in an Irish street-row than would keep Westminster Hall in humor for five weeks. . . . These valuable truths are no discoveries of mine. They are familiar enough to people whose business it is to know them. Hear what a douce and aged attorney says of your peculiarly promising barrister: "Sharpe? Oh! yes, yes; he's too sharp, too sharp by half. He isn't safe, not a minute, isn't that young man." "What style, sir," asked of an East India director some youthful aspirant for literary renown, "is most to be preferred in the composition of official dispatches?" "My good fellow," responded the ruler of Hindustan, "the style, as *we* like, is the Humdrum."

This is the spendthrift wit of youth. Yet behind the cynicism we discover a sincere conviction which Bagehot stated time and again in his maturer years, though with more regard for tender sensibilities. Discussing Lord Eldon, in his essay on the "First Edinburgh Reviewers," he says, "As for Lord Eldon, it is the most difficult thing in the world to believe that there ever was such a man. It only shows how intense historical evidence is, that no one really doubts it. He believed in everything which it is impossible to believe in—in the danger of Parliamentary reform, the danger of Catholic Emancipation, the danger of altering the Court of Chancery, the danger of altering the Courts of Law, the danger of abolishing capital punishment for trivial thefts, the danger of making land-owners pay their debts, the danger of making anything more, the danger of making anything less." Why did the English endure the everlasting Chancellor? "The fact is, that Lord Eldon's rule was maintained a great deal on the same motives as that of Louis Napoleon. . . . He was, like the present Emperor, the head of what we call the party of order. Everybody knows what keeps Louis Napoleon in his place. It is not attachment to him, but dread of what he restrains—dread of revolution. The present may not be good, and having such newspapers is dreadful; but it is better than no trade, bankrupt banks, loss of old savings, your mother beheaded on destructive principles, your eldest son shot on conservative ones." Note the resemblance between this and the following from the second letter on the "French Coup d'Etat of 1851": "The first duty of society is the preservation of society. By the sound work of old-fashioned generations, by the singular painstaking of the slumberers in churchyards, by dull care, by stupid industry, a certain social fabric somehow exists; people contrive to go out to their work, and to find work to employ them actually until the evening, and this is what mankind have to show for their six thousand years of toil and trouble. To keep up this system we must sacrifice everything. Parliaments, liberty, leading articles, essays, eloquence—all are good, but they are secondary; at all hazards, and if we can, mankind must be kept alive."

It was probably during his stay in Paris that Bagehot gave up the idea of the law and decided to join his father in the Somersetshire Bank and in his other affairs as merchant and ship-owner. Hutton seems to think that his health, never quite secure, had something to do with this decision. Mrs. Barrington is convinced that Hutton was restrained by motives of delicacy from stating what she believes to be the real cause. It is from her account that most persons will learn for the first time that Bagehot's mother had fits of insanity. The domestic life of the Bagehot family was clouded by the melancholy fate of this clever and estimable woman, and it is more than likely that Walter Bagehot went back to Somersetshire for the sole purpose of alleviating the lot of his father. Eventually, he succeeded his father in the management of Stuckey's Bank. In 1858 he married the eldest daughter of the Right Honorable James Wilson, who had founded the *Economist* for the purpose of promulgating the doctrine of Free Trade. In 1860 Wilson died in India, where he had gone as the financial member of the Indian Council, to reduce, so far as possible, order out of the financial anarchy then prevailing there. On Wilson's departure Bagehot became editor of the *Economist*, a position which he held to the end of his life. He died in 1877.

II.

Bagehot wielded a busy pen almost from the time when he returned from Paris. His exquisite study of Hartley Coleridge was written in 1852; and this was followed by a long series of literary, biographical, and economic essays, all characterized by shrewd and penetrating observations, subtle and delicate distinctions, voluminous and pithy allusions, searching philosophy (he had mas-

tered his Kant), profound acquaintance with political systems, common-sense political economy, and a diction which ranks him, despite his absent-mindedness in composition, with Newman and Arnold.

To most persons Bagehot is known chiefly by three works, "Physics and Politics," "The English Constitution," and "Lombard Street." Bagehot's imagination was captivated by Wallace, Darwin, Lubbock, and Sir Henry Sumner Maine, and "Physics and Politics" was the outcome. One of the peculiarities of this age, he says, is the sudden acquisition of much physical knowledge. "There is scarcely a department of science or art which is the same, or at all the same, as it was fifty years ago. A new world of inventions—of railways and of telegraphs—has grown up around us which we cannot help seeing; a new world of ideas is in the air and affects us, though we do not see it. . . . I think I may usefully, in a few papers, show how, upon one or two great points, the new ideas are modifying two old sciences—politics and political economy."

Bagehot has recently been called a great *précis*-writer. That is a most inadequate term if it is meant to imply that he was only a *précis*-writer; but if the meaning is that, among his other accomplishments, he could condense another's thought and restate it in clearer and more penetrating language, the characterization is profoundly just. Like Shakespeare and Handel, he always repays with interest: the great physicists of the nineteenth century are, in fact, in debt to Walter Bagehot—in "Physics and Politics" he has provided delightful propylæa to the study of their masterly works. It is in this work that he states his cherished theory of "imitation" with greatest clearness. He discusses nation-making and the changes that take place in national thought and feeling from age to age. Of course, he says, there was always some reason (if we could only find it) which gave the prominence in each age to some particular winning literature. There is always some reason why the fashion of female dress is what it is. But just as, in the case of dress, we know that nowadays the determining cause is very much of an accident; so in the case of literary fashion, the origin is a good deal of an accident. What the milliners of Paris, or the *demi-monde* of Paris, enjoin English ladies is, he supposes, a good deal of chance; but so soon as it is decreed, those whom it suits and those whom it does not, all wear it. The imitative propensity at once insures uniformity; and "that horrid thing we wore last year" (as the phrase may go) is soon nowhere to be seen. Just so a literary fashion spreads, though he is far from saying with equal primitive unreasonableness—a literary taste always begins on some decent reason, but once started, it is propagated as a fashion in dress is propagated; even those who do not like it read it because it is there, and because nothing else is easily to be found. The same patronage of favored forms, and persecution of disliked forms, are the main causes, too, which change national character. Certainly, the philosophy of history was never handled more familiarly, and some will think with less seriousness; but Bagehot, more than any man of his generation, with the exception of Newman, grasped the fact that the greatest of human transformations originate in the simplest and most naïve of human emotions.

As the English Constitution has been in the melting-pot ever since the Reform Act of 1867, I am not disposed to dwell on Bagehot's celebrated work on that subject. In 1872, in his introduction to the second edition, he says: "A new Constitution does not produce its full effect as long as all its subjects were reared under an old Constitution, as long as its statesmen were trained by that old Constitution. It is not really tested till it comes to be worked by statesmen, and among a people neither of whom are guided by a different experience." The change since 1865, he declared, was a change not in one point, but in a thousand points; it was a change not of particular details, but of pervading spirit. The pervading spirit born of the Reform Act of 1867 has animated the British people for half a century; few of those now influenced by it were trained by the old Constitution; it has come to be worked by statesmen, and among a people neither of whom are guided by "a different experience." Bagehot was not lacking prophetic insight. He conceived that questions might be raised which, if continually agitated, would combine the workingmen as a class together. In "The English Constitution" we again find allusion to the Englishman's love of stupid people. Speaking of a completely new House of Lords, mainly composed of men of ability, selected because they were able, he says: "In the present English world such a House of Lords would lose all its influence. People would say 'it is too clever by half,' and in an Englishman's mouth that means a very severe censure."

The changes in British politics in the last half century are not greater than the changes in British finance. In 1873 Bagehot wrote: "Since 1844 Lombard Street is so changed that we cannot judge of it without describing and discussing a most vigorous adult world which was then small and weak." The period since 1873 may fitly be described in almost the same words. For this reason, "Lombard Street," Bagehot's most widely read work, is no longer the vitalizing influence that it was. The things for which it contended have become, in very large measure, accomplished facts. Yet "Lombard Street" still remains a work of great charm and instruction. Bagehot maintained that the Bank of England was bound not only to keep a good reserve against a time of panic, but to use that reserve effectually when that time of panic came. The keepers of the banking reserve, whether one or many, were obliged then to use that reserve for their own safety. If they permitted all other forms of credit to perish, their own would perish immediately, and in consequence. It is hard to believe that this could have ever been doubted. Yet in Bagehot's day, so far as the Bank of England was concerned, a denial was entered. It was alleged that the Bank of England could keep aloof in a panic; that it could, if it would, let other banks and trades fail; that if it chose, it could stand alone and survive intact while all else perished around it. On various occasions, most influential persons, both in the government of the Bank and out of it, said that such was their opinion. The world owes it to Bagehot, in no small part, that such is no longer accepted opinion. It is a surprising fact that no one has yet called attention to the marvellous justification of Bagehot's theory of banking discoverable in the methods employed a year ago by the Bank of England in meeting the situation created by the sudden outbreak of the war.

Yet, after all that is said of his writings, it is the man himself that wins our admiration and affection. His must have been an irresistible personality. The intellect could never have slumbered while in his presence. Everything that one reads about him, and much that one reads in his published works, indicates a sensitive organization, a high spirit (as well as high spirits), a quick appreciation of everything that was just and fine. One would fail to estimate him correctly if one should say that he could be grave and gay, literal and fanciful, matter of fact and witty, in the same breath; these opposite qualities did not so much follow one another as interpenetrate one another in his discourse. He possessed both wit and humor; yet with him they were not mere playthings, but a peculiar vehicle for expressing the highest and most necessary truths.

Book Notes and Byways

ABIGAIL ADAMS AND A FORGOTTEN POET.

By JOHN THOMAS LEE.

Abigail Adams, wife of the second President of the United States, was perhaps the most remarkable woman of the American Revolution. Her published letters amply show her great qualities of mind and heart; moreover, they shed on the period a certain light which can be found in no other printed word. Although largely self-taught, Mrs. Adams was a diligent reader of the English poets and moralists, and she was particularly fond of poetry. It is therefore not in the least surprising that, when a resident of London about the year 1784, she should choose from the attractive shelves of James Dodsley, in Pall Mall, a volume of 243 pages, entitled "The English Garden: A Poem in Four Books," by W. Mason, M.A. (York, 1783), as a present for her niece, Eliza Cranch, the daughter of her elder sister, Mary.

By a lucky chance this volume has been

saved from destruction. A few months ago, while looking over a wheelbarrow-load of rubbish in a second-hand book-shop in a small city of the Middle West, I came across a little book bound in full-calf, which, however, possessed no interest for me until I read the inscription on the fly-leaf. There in a clear, bold hand was written: "Eliza Cranch's from her Aunt A. Adams." Here, then, was an association volume of uncommon interest—an item almost unique by reason of its rarity. This particular edition of "The English Garden" is enriched with commentary and notes by W. Burgh, Esq., LL.D. The learned Doctor's contribution is of greater length than the poem itself. In 125 pages he ponderously displays his erudition and expository powers; but, unfortunately, his somnolent commentary fails to make this "polite" bit of literature more readable. Eliza, no doubt, read the poem with rapt attention. For the young woman of to-day that would be a quite impossible performance. Indeed, I know of few students of poetry who would now feel any degree of eagerness to master the contents of "The English Garden."

The Reverend Mr. Mason has long been a forgotten poet. Two things only, so far as I am aware, have served to keep his name alive: his friendship for the poet Gray, from whom he received many letters, and his famous line on Hume, which finds a place in Bartlett's "Familiar Quotations":

The fattest hog in Epicurus' sty.

The line is from Mason's "Heroic Epistle" to Sir William Chambers—likewise a forgotten worthy.

Mr. Edmund Gosse tells us that Mason's letters to Gray were not infrequently "tributes to his own inordinate vanity." But in spite of this, Gray entertained a genuine friendship for the man, and speaks in the highest terms of Mason's gifts. Concerning his capacity for writing odes, Gray says: "Mr. Mason indeed of late days has touched the true chords, and with masterly hand, in some of his Choruses." And to him Gray addressed his "Comic Lines." Boaden, in his "Life of Kemble," informs us that "Mason was not meanly skilled in choral and scientific composition." The versatile clergyman also invented a musical instrument, which his friend Gray, in a letter dated May 23, 1767, calls a "zumpe." Mason was appointed Chaplain in Ordinary to George the Second in 1757.

Yet he is now all but forgotten; a fact at which I did not marvel when I tried to read his poem, "The English Garden," for the sake of the noble woman, who, one hundred and thirty years before, had purchased it in a famous London book-shop as a gift for Eliza Cranch. We may here indulge only in the opening lines:

To thee, divine SIMPLICITY! to thee,
Best arbitress of what is good and fair,
This verse belongs. O, as it freely flows,
Give it thy powers of pleasing: else in vain
It strives to teach the rules, from Nature drawn,
Of import high to those whose taste would add
To Nature's careless graces; loviest then,
When, o'er her form, thy easy skill has taught
The robe of Spring in ampler folds to flow.

The late Mr. Charles Francis Adams was much interested in my "find," as he termed it, and only a few days before his death wrote about it in part as follows:

There can, I think, be no question whatever that the autograph is that of Mrs. Adams. Her handwriting was distinct and characteristic. I feel no hesitation on this head. It is certainly a curious "find." . . . Eliza Cranch was Mrs. Adams's niece—the daughter of her sister. There is a tract of land in the town of Quincy, Massachusetts, still known as "Cranch's pasture." On it stood the house of Judge Cranch, his brother-in-law, appointed by John Adams, if I recollect right, the first Postmaster of Quincy. The Cranch pasture subsequently passed into the possession of John Adams, and not so very many years ago it was still a cow-pasture, in which I was wont to practice and train my horses.

Mr. Adams's wonderfully rich life closed soon after writing this letter, and I like to think that the recovery of the little volume gave him pleasure.

Correspondence.

THE NATION'S WAR RELIEF FUND.

To the Editor of The Nation:

Sir: I see that "O." has sent you his check for $2,000, although the condition he laid down has not been fulfilled. I see no reason why I should not do likewise as to the little contribution which I was prompted to offer in support of his scheme. I therefore enclose $200, to be divided equally between the Belgian Relief Fund, the Polish Victims' Relief Fund, the Serbian Relief Committee of America, and the Jewish Relief Society for Poland.

"SWEET VOICES" OF CONSCRIPTION.

To the Editor of The Nation:

Sir: The conjunction, in the morning's newspaper, of Secretary Garrison's hint of a possible "compelling" of military service in this country, and Myron T. Herrick's publicly announced advocacy of "universal military service" for Americans, brought to my mind a paragraph from George Gissing's incomparable book, "The Private Papers of Henry Ryecroft." Let me quote the passage here:

"Some one, I see, is lifting up his sweet voice in praise of conscription. It is only at long intervals that one reads this kind of thing in our reviews or newspapers, and I am happy in believing that most English people are affected by it even as I am, with the sickness of dread and of disgust. That the thing is impossible in England, who would venture to say? Every one who can think at all sees how slight are our safeguards against that barbaric force in man which the privileged races have so slowly and painfully brought into check. Democracy is full of menace to all the finer hopes of civilization, and the revival, in not unnatural companionship with it, of monarchic power based on militarism, makes the prospect dubious enough. . . . But what a dreary change must come upon our islanders if, without instant danger, they bend beneath the curse of universal soldiering!"

If an Englishman, the citizen of an Old World empire, won and welded primarily by armed force, could feel thus in regard to compulsory military service, with what tenfold or hundredfold "sickness of dread and of disgust" must the possibility of this evil be viewed by Americans! For myself, nothing in all the black history of the past seventeen months seems so fraught with menace for the future—not the future of America only, but of the world. Murdered lives, squandered treasure, devastated towns—these are things over which time soon draws its veil, things which leave no ineradicable scar upon humanity's face. But national ideals, the precarious inch-by-inch growth of centuries, once cut down and trampled upon, are almost irreparably lost. A few months ago America was the hope of the world, the young Moses who alone might lead the nations out of the bondage of armaments and militarism, whose opportunity it was (the most glorious that ever presented itself to any country) to take the van in a world movement towards reason and brotherhood as opposed to the old suicidal dependence upon brute force. To-day America is embarked upon a policy that will soon make her the chief menace to world peace—the leader in a new and madder race to ruin among the nations; a policy that means the Prussianization of the entire world for an indefinite time to come. Never was a warning to mankind fulfilled more utterly than the Christian message that blazes in letters of fire and blood in the eastern sky, "They that take the sword shall perish with the sword!" And yet, blinded to that message by fear and selfishness and distrust and hatred, we Americans are wildly throwing overboard all our traditions, all our Christianity, and are taking the sword. Of course we do not lack the old hypocritical mask behind which every nation and every individual, however lawless and tyrannical, has made the appeal to force. "So long as right and wrong exist in the world there will be an inevitable conflict between them. The right-doers must be prepared to protect and defend the right as against the wrong." Nor is the old sophistry lacking to darken counsel and confuse the dull-witted. "One is impelled to query upon what proper consideration there is based any distinction between the right or necessity or desirability of using mental force to repel error, moral force to repel evil, and physical force to repel wrong." There is the frightful essence of the whole matter! To Secretary Garrison, and to the average American whose mind he so well typifies, there *is* no distinction between moral suasion and brute force—Marcus Aurelius is on the same level with Attila, Christ with Wilhelm II. Ideals, traditions, moral values—what are these but "sloppy sentimentalities," the nebulous mental playthings of dreamers and mollycoddles! Let us be real men in a real world. Let us base our conduct "upon a consideration of facts or conclusions of reason." Let us have our "supreme navy," our "world's biggest guns," our conscript army, and all the rest of it. Let us lead the nations in a new and more furious dance of death than has yet been known.

Waldo R. Browne.

A FRENCH VIEW OF AMERICA.

To the Editor of The Nation:

Sir: Apropos of the reports which have reached this side of the ocean that ex-President Roosevelt is so keenly disappointed in the course which the American Government has pursued in the matter of its foreign policy that "he would be ashamed to show himself in Europe," may I address to you a few reflections? Of course these problems are very delicate and complex, and I am also well aware that a foreigner should hesitate to intrude in affairs of this kind. But, on the one hand, my attachment for America is so strong that I do not look upon it as a wholly foreign

land to me; and, on the other hand, it is not my intention in this letter to try and settle the question myself. I wish simply to draw the attention of your readers to one of the aspects of it with which they may not be thoroughly acquainted; and, furthermore, they will be quite free to attach whatever importance they may see fit to what I say.

I refer to the incontestable fact that the present attitude of the United State, at least as it appears from this distance, is producing here in Europe a very unfavorable impression.

But I hasten to add that this feeling is far from being associated with all Americans. Those who know and understand your country make a marked distinction between the two sorts of citizens which you have on your side of the Atlantic—those who practice truly the free spirit of America, and those who do not. There are those who, like Mr. Roosevelt and others, wished to come to the defence of Belgium when her neutrality was violated, recognized as it was by the signature of the United States in the conventions of The Hague, or at least give of their riches and their devotion, as so many of your countrymen and women are doing in this Ambulance, to the victims of this atrocious war. But there are others who, too inclined to put first considerations of their own profit, their own quiet, and their own safety, seem to have as their only care the maintenance of peace at any price, forgetting, as Mr. Roosevelt has well said, that, though war is a great evil, it is not the greatest evil. Shame on him who would not prefer the glorious martyr Belgium, victim of its respect for its plighted word, to the tranquil and despicable lot of Greece, refusing to carry out the stipulations of its treaty with Servia, because the danger is too great!

I would not be misunderstood. The friends of America on this side of the ocean do not exactly complain because she does not take part in the war; they are ready to let her be the judge of her duty in this matter, and, furthermore, they fully appreciate the great service she is doing the cause of the Allies by the single fact of her business transactions with them. What afflicts us who have a warm affection for your grand country is to see the American name lose little by little its ancient prestige and fall from the high rank which it once held in the eyes of the other nations. It is hard for us to hear repeated so often over here railleries like this:

"They are easy-going, your Americans! They threaten, and then they are treated in just the way they said they must not be treated! Then they get angry, but again no attention is paid to their anger. They protest once more, but less and less attention is paid to their protest, for it is felt that words and not acts are to be the order of the day. And now they are not even able to prevent a foreign nation from sowing discord among them, causing fires, explosions, and attempts at murder. One asks how much further their patience will go."

But thanks to the views and acts of a large portion of the American public, we are able to reply:

"You have no right to judge the United States by the newly-arrived citizens, who are not yet completely freed from the influences of their former home. Judge her by her real children, the worthy descendants of the companions of Washington and Lafayette; those who were born on American soil, and have drawn from the generous land the sentiments of true honor, the love of justice and real liberty. They are the *élite* of the nation; they are its heart and intelligence. It is their mission to educate their fellow citizens, and in all great crises like the present they end by having the last word. Once again the future will prove the correctness of this assertion."

Such is our reply, and I feel sure that you will approve of it. ABBE FELIX KLEIN.

Chaplain of the American Ambulance.

Neuilly, near Paris, November 29.

SEX IN FICTION.

TO THE EDITOR OF THE NATION:

SIR: Might I be permitted to append my feeble chirp to Mr. Sherman's magnificent three-page excoriation of Mr. Dreiser and the American realists, and at the same time to air a little grievance of my own?

I am on the executive committee of our local book club. Last winter, for some reason, fiction was hard to come by. The level was low. Such as they were, we got together a tolerably representative lot of reasonably recent novels, English, French, and American; and of all these books—thirty in number—just two were vivid and alive: Mr. Dreiser's "Financier" and Mr. Adams's "Clarion." Unlike as these two books were, they had one peculiarity in common: trenchant and sure when they dealt with the world of men, they became inept, silly, and coarse when they touched the world of sex. I think Mr. Sherman is most unjust to Mr. Dreiser's handling of his financier's business side. That seemed to me masterly; but when it comes to the financier's "softer" side—well, Mr. Sherman's treatment errs, if at all, on the side of gentleness.

And now comes my grievance. This autumn we went forth again to forage for our winter supply of literature, turning eagerly to the two men who had so impressed us the year before, to find that Mr. Dreiser had given to the waiting world a book which he called "The Genius," but on which we bestowed the sub-title "The Amatory Adventures of a Consummate Cad," and forthwith discarded; while Mr. Adams had produced something called "Little Miss Grouch." Possibly we were hasty, but it seemed to us to call for neither sub-title nor examination.

Now this is odd. Americans, who are second to no men in fineness of feeling towards women, seem to be constitutionally incapable of handling the sex motive in fiction. They are either coarse, like Mr. Dreiser; silly, like Mr. Adams and Mr. Chambers, or frigid, like Mr. Churchill and Judge Grant. So why can't they leave it alone? Frenchmen handle it cleverly, Englishmen gracefully—why not leave it to them? They can be relied upon to keep up our interest in the subject. Heaven knows, they give us enough of it! Sex—*sex*—SEX! Until the cloyed reader cries out with Solomon, "Stay me with flagons, comfort me with apples, for I am sick of love!" Even Mr. Sherman in his review treats it as if in fiction it was the only thing that mattered; but really, as dear old grouchy Carlyle remarked, laying down a recent book by a lady novelist, a forerunner of the present school, for most of his great contemporaries used sex merely as a pin to hold their plot together—such a bent, inadequate, brassy pin, it's a pity they used it at all! "It is a biological fact that only one form of organism exists for that and that alone—the coral polyp."

Defoe, and later Stevenson, greatly daring, threw away the pin. There is no reason to suppose Mr. Stevenson's pirates in "Treasure Island" were sexless. He merely didn't touch that side of them. It was not necessary. There were no women on the Caribbean—there aren't many on the Stock Exchange. After all, men occasionally, in life, keep the two sides separate. M. A. A.

Concord, Mass., December 9.

CLASON'S TWO BOOKS.

TO THE EDITOR OF THE NATION:

SIR: I shall be grateful for space to make an inquiry. In collecting notes on the very numerous attempts to continue Byron's "Don Juan," I have found references to two such poems by Isaac Starr Clason, one, "The Ingenious Forgeries of Don Juan," 1825 (see Sabin's "Bibliotheca Americana"), the other, "Don Juan, Cantos IX, X, and XI," Albany, 1823 (see Cushing's "Anonyms"). Neither of these is at Harvard, Columbia, in the Harris collection at Brown, in the Library of Congress, or in the New York Public Library. In the catalogue of the last named library an anonymous "Continuation," London and Oxford, 1825, is incorrectly ascribed to Clason on the evidence of a pencilled note on the title-page of the copy there. Prof. W. E. Leonard ("Byron and Byronism in America," p. 93) describes one of Clason's continuations, but he is unable to tell me where he saw the copy, his notes being now inaccessible. I may add that the spurious cantos published by Duncombe, London, 1825, are not by Clason. Can any one tell me where to find copies of Clason's two books?

TRUTH IN WINE.

TO THE EDITOR OF THE NATION:

SIR: The following *goguette* from Mrs. Piozzi's "Anecdotes" will perhaps bear repetition as a relatively obscure document. The capping epigram itself is for deftness and pungency worth a classification with Johnson's best ("Anecdotes of the Late Samuel Johnson, LL.D.," Fourth Edition, p. 261).

"It was, however, unlucky for those who delighted to echo Johnson's sentiments, that he would not endure from them to-day, what perhaps he had yesterday, by his own manner of treating the subject, made them fond of repeating; and I fancy Mr. B—— has not forgotten, that, though his friend one evening in a gay humor talked in praise of wine as one of the blessings permitted by heaven, when used with moderation, to lighten the load of life, and give men strength to endure it; yet, when in consequence of such talk *he* thought fit to make a Bacchanalian discourse in its favor, Mr. Johnson contradicted him somewhat roughly as I remember; and when to assure himself of conquest he added these words, 'You must allow me, Sir, at least that it produces truth; *in vino veritas*, you know, Sir'—'That (replied Mr. Johnson) would be useless to a man who knew he was not a liar when he was sober.'"

Literature

A SOCIALIST GENIUS.

Jean Jaurès: L'Homme—le Penseur—le Socialiste. By Charles Rappoport. Paris: L'Emancipatrice. 5 francs.

At the first page of this "book on Jaurès"—for it is that rather than a life—our breath is fairly taken away by words of Anatole France:

I will give you a preface in which I shall try to follow out your thought and pay homage to the greatest genius of modern times. But it would be impossible for me to write a line of such work during the war. . . . After the war the genius and work of Jaurès, which you have made to live again, shall serve us for a guide and inspiration.

To genius in the Aristotelian explanation—superior power of putting two and two together—Jaurès might well lay claim. So, too, in Cousin's sense of power of continuous application. Like Dr. Samuel Johnson, his communicativeness equalled his receptivity, while, unlike the English doctor, he had, with tireless strength of body, that devouring activity of both body and mind which is characteristic of Frenchmen at their best. As a rhetorician he was the equal of Gambetta, who was comparatively uneducated and without Jaurès's mental readiness of resource; and he was superior in the power of consistent thinking and in personal character, though inferior, in political sense, to Mirabeau, the other Frenchman whom he most resembled.

While waiting for Anatole France's study of the genius, we may accept for the man a formula of Dr. Johnson. He had just warned Boswell: "'Never believe extraordinary characters which you hear of people. Depend upon it, Sir, they are exaggerated. You do not see one man shoot a great deal higher than another.' I mentioned Mr. Burke. Johnson—'Yes; Burke *is* an extraordinary man. His stream of mind is perpetual.'" No genius of modern times had a stream of life more abundant and perpetual than Jean Jaurès. Yet, on the whole, we might have expected from him something more—something to endure in intellectual production or political reform or social transformation.

In this book, though long in parts and in others obscured by the smoke of recent conflicts, we have materials for judging a great man and an important life; and it is likely to remain for a long time our chief source of information. The speeches and newspaper articles in which Jaurès uttered himself to France day after day, year after year, except in extracts such as are here given have passed with their occasion. This is the common fate of politicians, unless, like Burke, they take time to elaborate masterpieces. Gambetta has left scarcely more than a few happy formulas which he threw into the balance of history. Jaurès has a better chance of furnishing to the rhetoric of the future fragments like the classical *conciones* with which Roman history has been taught in France ever since the Renaissance. Of the Jaurès all but unknown in foreign countries, there is something else that may be more enduring than his eloquence. It is the philosophic mind which shows itself in the pages of his "Socialist History," particularly of the French Revolution.

The author of this book is an old and close friend and associate of Jaurès, but he is no Boswell:

I have limited myself to the modest rôle of secretary of Jaurès's thoughts, and of the events which called them forth. Indeed, I might have called my book "Jaurès, Told and Explained by Himself." . . . I have tried, while explaining the *essentials* of his life and work, to settle their fundamental idea and directing principle. I flatter myself that I have found the intimate bond that existed between his whole political and social action and his philosophical ideas, which are little known, and so much the more wrongly known.

The middle-class quality—*bourgeoisie*—of Jaurès's family and surroundings is more important in considering his career than his birth in the South of France, although *méridionaux* like himself have had more than their share of political influence. Henri Martin, in his monumental wall-painting in the Salle des Illustres of the Capitole of Toulouse, has Jaurès conspicuous with the others. His uncle was an Admiral who sat as a Republican Senator and was Ambassador at Madrid and St. Petersburg (as it was then) and, as Minister of Marine, lived to face in Parliament his nephew, who was already a disquieting Republican, but not yet a Socialist.

Most *bourgeois* of all was the education of Jaurès, first at his provincial college, then at the Paris Lycée, where he won his baccalaureate at nineteen, and lastly at the old and world-famous Ecole Normale, where he was fed on the purest fruit of the Humanities. At the age of twenty-two he came out an *agrégé* (accepted state professor) of the University of France along with Bergson, who has stuck to philosophy. Jaurès also went forth to teach philosophy for two years in a women's college at Albi, and for two years more he lectured in the University Faculty of Toulouse; but then, in 1885, at twenty-six, he was elected to Parliament—and so finally escaped into politics. Six years later, when his fame as a politician and orator was already established, he went back to pass his two theses for the University doctorate—one a bulky volume in French on "The Reality of the World of Sense," and the other, in Latin, on "The Origins of German Socialism."

Here the distinction of the Man, the Thinker, and the Socialist (which is the somewhat arbitrary division of this book) all but ceases, for never was a public career so underlain by one system of thought and method of thinking. Jaurès, with all his genius, was the *vir systematicus*. His thought was not original, and the consistency of his thinking was in great part an acquirement of superior intellectual training; but there was all the impressiveness of unity and quantity in the result. He was not merely, as Mirabeau's father reproached his son, a "swallower of formulas"; but he deserved fully the veteran philosopher Renouvier's reproach against most systems, that they are forever "realizing abstractions." In working out his Socialism, philosophical as it was, Jaurès seems not to have been trained to that unremitting recall of speculative generalities to real individuals which John Stuart Mill, who was almost the first to segregate the moral sciences, made their necessary condition. "Only particulars do exist," said John Locke, translating the *Tantum singularia existunt* of scholasticism.

Jaurès himself noted very properly in his thesis:

If Karl Marx had not had the Hegelian dialectic imprinted in his mind, he would not have attached the whole economic movement of England to such Socialist dialectic. England furnished the facts, but German philosophy interpreted them. When you penetrate German Socialism, you find it includes a philosophy. It pretends that in history and political economy there is a certain dialectic which changes the forms of things and the relations of men. It defines liberty, not as an abstract faculty of choosing between contraries or a hypothetical independence of each citizen taken individually, but as the veritable basis of the equality of men and their communion. . . . To German Socialism, accordingly, there is attached a solid dialectical doctrine of the Universal Becoming, of human liberty, of Nature and God.

In plain language, such Socialism does not seem to allow the individual citizen, as a matter of right, to do what he pleases, but only as a matter of social expediency. Tocqueville noted that, all through the French Revolution, in spite of the proclamation of the Rights of Man, liberty was confounded with equality. Tocqueville perhaps, and Jaurès certainly, were not acquainted with the words which John Adams wrote in 1766 in praise of the British Constitution, while he was leading Americans to an independent imitation of it: "Liberty is its end, its use, its designation, drift, and scope, as much as grinding corn is the use of a mill."

German philosophic Socialism, under its mask of Internationalism, was to take full possession of the thinking and speaking mill which Jaurès had become. His last pained astonishment, before a criminal fool struck him down, was to find the Internationalism disclosing stubborn Germanism behind it in fundamental accord with Prussian militarism.

With this clue the open-eyed reader will be able to thread the labyrinth of Jaurès's thought as presented in this book, where much truth is often inverted and confused. Above all, a firm hold on Americanism, so far as it has been worked out, is necessary to avoid being swamped in all this Socialism which, in the reality of human lives, has never been worked out at all.

It is plain that Jaurès, in his conception of the state as it is to be constituted by Socialism, that is, of the human community

as he would have it reorganized for the Society of the future, had no notion of liberty and authority essentially different from that which he found in the traditions of the French Revolution. This is why the work of Jaurès, which is least known abroad—his "History of the Revolution"—is the most important for the student who would understand:

It is from the Socialist point of view that we wish to recount to the people, to workmen, to peasants, the events which developed themselves from 1789 to the end of the nineteenth century. . . . How and through what crises, by what efforts of men and what evolution of things, did the proletariat grow to the decisive part which it shall play to-morrow? It is this which all of us [the many-volumed book was the work of several authors, along with Juarès] militant Socialists purpose recounting. We know that economic conditions, the form of production and property, are the foundation depths of history. And, while the economic life is indeed the foundation and the upward spring of human history, through all the succession of social forms Man, a thinking force, aspires to the full life of thought, to the ardent communion of unquiet mind, avid of unity, with the mysterious universe.

That liberty is the atmosphere in which man must breathe, no matter what the economic life, Jaurès and his masters did not know. "Also, our interpretation of history shall be at once materialist with Marx and mystic with Michelet."

In fact, Jaurès's whole theory of the state differs only in the location of the seat of authority from the previous absolute sovereignty. This the Revolution picked up when monarchy went to pieces, and transmitted it, whole and entire, to successive empires and monarchies and republics of France. Between this and the American idea of a primordial limitation of government itself—a restriction of the authority of the very community over the individuals composing it—the great Atlantic gulf between Europe and America is still fixed.

Even the sovereign independence of the judicial power which has created English liberties and, in spite of minor failures, still conserves American freedom amid "knavish politics," has won scant recognition and less esteem in France. American democracy, in which rule should work from the town-meeting up instead of from some convention down, seems, in France, to Socialists and Radicals and Conservatives alike, little better than Prince Kropotkin's Utopia based on the Russian *mir*. Logically, in the Socialism of Jaurès, the Government of the United States could be little more in theory than anarchy tempered by a judicial system, or in practice other than a capitalist machine. He seems never to have thought it worth his serious attention.

This inherent contradiction of the theory of German Socialism and its French derivatives with Americanism as it has grown up from the beginning is best heard in utterances of Jaurès where, to every thoughtful American, he was quite right in practice. In answer to unfair and untruthful attacks on his private life, such as one who breaks away from the social traditions to which he was born must always undergo, Jaurès wrote (the attack contrasted his little daughter's first communion with his Socialist severity to religion):

Never did I say that the Socialist party, when master of the state, will use violence in the state to abolish traditional worship. Never have I appealed to anything but the gradual organization of liberty and the intimate strength of science and reason. I do not believe that by Hébert's procedure we shall get the better of religion (*venir à bout de la religion*).

Surely, in the American sense, not "state" nor government nor any ruling majority has right or power to "abolish," either with or without "violence," or to "organize," gradually or at all, any human activity which is not comprised within the constitutionally limited sphere of government. Religion, in particular, so far from the state having the right "to get the better of it," is altogether removed from the control even of the entire community. Religious liberty—or any other liberty, if it is to have any meaning at all—must mean this. And "liberty" is not "toleration," the state which can tolerate being also capable not to tolerate.

This incomprehension of Jaurès was never so manifest as in the Parliamentary debates preceding the law "separating" the churches (Roman Catholic, Calvinist, and Luthern Reformed, and Jewish religious organization) from the French state. This separation mainly consisted in the withdrawal of state subsidies and the consequent cessation of the preceding state control over nominations of the clergy. The state regulation of religious communities had been secured by a previous law. Jaurès was chiefly responsible for the voting of the famous Article VIII, making it impossible for Catholics to accept their organization into the *associations cultuelles* which the law imposed on them, since it made such organization incompatible with the essentials of their religion. This is in direct contradiction with American religious practice, and has ended, in France, by making the law inoperative and leaving an uncertain, if not dangerous, civil status to religious organizations. In this, Jaurès overbore the superior political sense of Briand, who reported the bill in Parliament.

In the better known transformation of the Dreyfus case into the Dreyfus affair—of the revision of a military tribunal's judgment against an army officer into such a political campaign as even Revolutionary France seldom experienced—Jaurès was not of the first hour. It is true that, without the campaign, the judgment might never have been reversed. It was Senator Rane who first grasped the political opportunities of what in other countries would have remained a judicial case; and he succeeded in founding on it many generations of Radical rule. But he could not have succeeded if Jaurès had not awakened Socialists, against the judgment of older leaders, to possibilities which have made their vote in Parliament the turning-point of French policy ever since. In the judicial order, it may be doubted if the "case" has accomplished the reform in military or even civil tribunals which should have been its natural issue.

One of the most interesting chapters of this book is devoted to the "affair." The author, who was by Jaurès's side during its whole course, uses a fairness and moderation in his formulas which may astound foreigners who remember only the fury of the conflict. He has passed over the foolish, reckless, unscrupulous anti-Semitism which, if it did not invent the case, started the campaign—to its own well-merited disablement:

The Dreyfus affair concerned directly the army. High chiefs committed the fault of joining closely together their honor and that of the army with a judicial error having a material forgery as its basis. . . . From the Dreyfus affair issued, as from its immediate source, the precipitate action of "laicization" and democratization of France during the whole period of the most democratic Ministries which this country has known—that of Waldeck-Rousseau and Millerand and that of Combes.

Millerand, who later was the antagonist of Jaurès the Pacifist, was his early Socialist comrade just when Socialism was becoming a political power. It was then Clemenceau alertly took his party designation "Radical Socialist," saying: "I am Socialist, but not Collectivist." With Jaurès as "dictator" under Combes, France might have thought this, which came to be the governmental designation, was reversed.

Jaurès, though he seems not to have had the political sense to initiate, did have the readiness to profit by opportunities which others opened to him and his International Socialism. Only a world-war could sweep all away before him—and he died before he saw the full extent of the catastrophe to which his pacifism had helped to lead.

In his last speech—at Brussels, four days before all able-bodied Frenchmen were called to arms—he vouched for the French Government "practicing a policy of peace" and "wishing peace":

Attila is on the brink of the abyss, but his horse still stumbles and hesitates. . . . If appeal is made to a secret treaty with Russia, we shall appeal from it to the public treaty with Humanity. . . . At the beginning of war everybody will be hurried away. But when consequences and disasters unfold, the peoples will say to those who are responsible, "Get you gone, and God pardon you!"

At this writing—sixteen months later, months of wider and more cruel war than the world has seen before—Humanity has not been substituted for *Patrie*, the country of men's flesh and blood, nor has any people yet called monarchs or military aggressors to account. The author of this necessary book on Jaurès, while trying to save the future prospect of his life-work, acknowledges for the present:

What Jaurès feared has happened. Political and military reaction, pushing the world

into an abyss of bloody adventure without precedent, has destroyed the weak guarantees of peaceful evolution. . . . It has put in the order of the day—Revolution.

CURRENT FICTION.

David Penstephen. By Richard Pryce. Boston: Houghton Mifflin Co.

Three years ago five of Mr. Pryce's novels were published in America. The earlier stories were brilliant, but experimental and uneven. "Christopher" evidently represented his matured work, and with "Christopher" the present novel is naturally to be compared. They are both "life" stories, tracing the development of a human character from earliest childhood to maturity. David Penstephen is still a very young man when we part with him; but he has passed through fire, and his road lies clear before him. As for the character of his ordeal, it is very old-fashioned and very British. The time is late Victorian, from the sixties to the eighties (the period, we may note, of the author's own youth). This accounts, perhaps, for the fact that one fancies that there are traces of De Morgan, not only in the atmosphere, but in the manner, of the performance. Here, as Mr. Pryce suggests in one passage, is the England of Du Maurier. Here is an England still dominated by an ideal of passionate domesticity, still in practice worshipping the twin idols of Property and Family. It is as secret worshippers of these idols that the Penstephens come to grief. David Penstephen's father, rebelling against the smug conventions of society, has registered his protest by not formally marrying the woman of his choice. She is the old-fashioned type, the clinging-vine type, capable of infinite yielding to the authority of love, yet at heart obeisant to the more menacing authorities of church and caste. This is true despite her coming of "advanced" parents, as well as her union with an advanced mate. Penstephen's own people have refused to recognize the mother of his two children, and social difficulties have virtually exiled them from England, when the man at last realizes the woman's unhappiness and marries her. On the heels of this step comes the sudden news that, by one of those double fatalities so dear to the British romancer, Penstephen is become a baronet, and head of a family. And at this moment, the moment of their return home to take up their places as responsible members of society, the wife finds that she is to have another child. Here is our situation: the deadly wrong they have done their first-born, not by bringing him into the world without a name, but by making him ineligible to inherit property and title. The pathos of the ensuing narrative all centres here; it is rubbed in with unflagging diligence and seriousness. And we are required to believe not only that David's parents fail to tell him of his disability, but that he grows to manhood without discovering it. If we accept the premises, we are left free to acknowledge that the conclusion is worked up to with great skill and subtlety. David's growing sense of a mystery at the roots of his life is built up by cumulative allusions and inferences, which prepare the scene, quite in the De Morgan manner, for the predestined moment of rather brutal enlightenment. David comes through it all as triumphantly as the precedents permit. But the precedents (pitilessly British and "Victorian" to the end) can only yield him a forlorn and private pedestal, as an object quite as much of pity as of admiration.

Barnavaux. By Pierre Mille. Translated by Bérengère Drillien. New York: John Lane Co.

The title of this English version of "Sur la Vaste Terre" is not especially happy, since M. Mille's Barnavaux appears in only four of the ten tales in the collection. In a vague way Barnavaux may be called the Mulvaney of that story-teller who has with the vaguest appositeness been called the French Kipling. As with Mulvaney, the exploits which now and then lift him from the ranks are always followed shortly by exploits of a different sort, with the opposite result. But they both love moral liberty, and find it, by a familiar paradox, in the rôle of the subordinate. The episodes in which Barnavaux here figures are characteristic. In "Barnavaux, General," he puts down by sheer courage and effrontery an insurrection of natives against a lonely French post in Madagascar. In "Barnavaux, Statesman," he tells the story of a native woman who has refused to give herself to him because she is a slave, and it is unfitting that his son—the son of a god—should be a slave. This worship of the white man must be maintained, says Barnavaux, if he is to continue his rule. The others must be kept in ignorance. "We must not take the niggers out of their own country," he concludes simply; "we must not show them how we live at home, or there will be an end to our superiority and prestige." In another tale, of a French conscript who, being a Socialist, feigns blindness and escapes service, and then, as a man, debates the ethics of his act with the major he has deceived, M. Mille probes deep into the question of patriotism and its justification. The longest of the stories, "Ramary and Ketaka," presents without comment a picture of a double ménage involving two young Frenchmen and their little Malagasy "wives."

The Anvil of Chance. By Gerald Chittenden. New York: Longmans, Green & Co.

For some reason the schoolmaster is not often selected as a hero by the novelists; it seems to be felt that there is something essentially unheroic about the profession. Robert Brooke, Mr. Chittenden's hero, shares this feeling; he is rather ashamed of his job, and likes to pose as a journalist or something else whenever he gets the chance. In fact, he is an inveterate poser. As a college freshman, he adopted from a senior a working philosophy of life. "If you are walking with two other men, always manage to walk between them. People notice that sort of thing." Literally and figuratively, we are told, he has followed this advice; his acts are nearly always calculated with a view to making a favorable social impression. Fortunately for himself, on his first day of teaching he loses his temper under strong provocation and knocks down the biggest boy in the room; but the excellent effect produced by this spontaneous act does not suggest to him that his general course has been mistaken. He associates chiefly with the more superficial and cynical of his colleagues, and comes to regard the life of a teacher as necessarily narrowing. Nevertheless, he has good stuff in him; the trouble is that his whole scale of values is wrong. What he needs is some vital revolutionizing experience—a shock violent enough to break that false scale and force him to adopt a truer one. Through his very habit of posing he is driven against his will into such an experience, which need not here be described. The book is evidently a first novel; it bears the marks of youth, especially a certain rather conscious cleverness in the dialogue. But the central character is drawn with real insight, the pictures of life in a boys' school are excellent, and the story is thought-provoking.

God's Man. By George Bronson-Howard. Indianapolis: The Bobbs-Merrill Co.

One is tempted to dismiss Mr. Howard's effort as melodramatic clap-trap, but a careful study of its turbid length discloses occasional bits of verity and honest realism. Indeed, if it were not for the aggregation, the constant forced straining after atmosphere, the utter lack of sense of proportion, "God's Man" might have been a good book, almost a great book. As it stands, it is neither. It is merely the somewhat amateurish product of a man who dimly glimpsed a big idea. Concretely put, "God's Man" is the story of Arnold L'Hommedieu, son of a race of Long Island preachers, dedicated to the ministry, who, in his efforts to help others, finds himself plunged deeper and deeper into disgrace, until, at last, he consorts with thieves and smugglers. What plot there is revolves about the experiences of himself and two friends, who are all three expelled from college for their part in showing up a young scoundrel who had preyed on a weaker classmate. The lesson it pretends to teach is summed up in the words of a lonely philosopher, who advises L'Hommedieu on his final night of Calvary, when he faces the alternative of easy flight from justice or surrender, to take his punishment, and prove thereby that "the System was guilty, not the man." Argues the philosopher: "It was necessary that so-called Civilization should drag down a man meant to be good and force him to do evil. . . . Too many of the weak and helpless and ignorant and hungry had been sacrificed in previous warnings—and to what end? It was too easy for them to fall, too brutally easy for

so-called Civilization to kick them while they were down. . . . So somebody had to be sacrificed who hadn't any of the mob's ugly little reasons for rebellion. . . . And, above all, a man who would finally come before the Law, and stand his trial, and show that it was helping that brought him there, not hurting. Can't you see? From the first God meant it that way. That was why every time you helped another you hurt yourself."

The book is ambitiously planned, in broad, sweeping style; but it lacks the breath of life. Its characters move puppet-wise from page to page, talking, eating, acting existences that seldom approach the verge of reality. The bare truth is that one puts it down with the impression that some typical work of Mr. Wells has been carelessly Americanized—but, then, Mr. Wells would have polished off the rough edges, would have left a symmetrical whole.

NATURAL ARISTOCRACY.

Aristocracy and Justice. Shelburne Essays. Ninth Series. By Paul Elmer More. New York: Houghton Mifflin Co. $1.25 net.

Most of the essays of the present volume were written for the *Unpopular Review.* This will explain why, as a whole, they differ in character from the literary and biographical analyses of previous series. Mr. More writes as usual with a grace of style which is the expression of a scholarly and disciplined mind. As a literary product, however, the present seems less attractive than former series. Evidently, Mr. More is at his best in the analysis of the individual. At any rate, it seems that the essays of the present series suffer from being brought together. Each a pleasure and a stimulus when read by itself, the combined effect is that of a too extended homily, in which the denunciation of evil tendencies tends to overshadow and obscure the outlines of the positive theory of good.

In taking the side of "aristocracy" and of "justice," Mr. More stands firmly for the Platonic and Aristotelian conception of an ordered society based upon distinctions of intelligence and merit, as against modern "humanitarianism" and "democracy"; in "humanitarianism" his readers will recognize the social equivalent of romanticism. The political philosophy of the Greeks was based upon intelligence, which Mr. More defines as (it seems, exclusively) the faculty of making distinctions; and therefore upon fact. Modern humanitarianism rests, however, upon an appeal to the emotions. Sympathy with the under dog leads us to overlook those distinctions of merit and capacity which form the basis of justice, and from moral distinctions the attitude is extended to intellectual distinctions. One man's opinion, we hear, is as good as another's; the uninformed are as much to be trusted as the informed. But really they know a little more. For the essence of romanticism is to believe that, in the end, the children of nature are endowed with an insight somewhat superior to that of the children of light.

As against this, Mr. More stands for a "natural aristocracy," that is, an aristocracy based upon merit rather than upon hereditary privilege or prescriptive right—reminding us, indeed, that the purpose of every theory of social and political relations is to find a method for putting each individual into his proper place. But how a respect for the superior is to become a recognized institution, he does not tell us; perhaps he remembers that upon this point Plato was equally at a loss. Addressing himself to educated men, however, he calls upon them to stand for their own, to speak the truth as they see it, without regard to the offence given to popular sympathies. We have heard much of late years about "class-consciousness"; it is time that class-consciousness be developed among men of superior intelligence.

Thus far we may follow him. Nor may we doubt that the sermon is timely. It is hardly too much to say that pandering to the multitude is our national American vice; nor, again, that the fact stands for a general flabbiness of mind. In the small town one learns that the first article of virtue is to avoid being a "knocker"; in other words, find out what is pleasing to your fellows and stand for it. Nor is the vice confined to the uneducated. When one hears the modern college professor explaining to only too credulous students that the really educative and enlightening features of the college life are the sports and the "interests," one feels inclined to apply Mr. More's epithet, "a traitor to his class."

According to Mr. More, however, the cure for "democracy" is not more democracy, but better democracy. This seems harmless enough. But we have just read that "better democracy" consists "in bringing the people to respect and follow their right leaders." And this we beg leave to doubt. Following the leader seems hardly to belong to any sort of democracy. The phrase is significant, however, as revealing a set of implications, running throughout the volume, which, in the opinion of the reviewer, are incompatible both with justice and with any genuine aristocracy. Mr. More calls upon the upper class of educated men to stand for themselves, while in the same breath he resents a similar attitude on the part of the presumably lower class representing manual labor. Trade-unionism he treats as a species of "humanitarianism." The upper classes are, therefore, to be guided by their own intelligence, while the lower classes are to defer to the intelligence of their superiors. In a word, the doctor is to prescribe to his patient, but the patient is not even to choose his doctor. One wonders how this differs from a "prescriptive" aristocracy—and, indeed, whether Mr. More's rejection of prescriptive distinctions is not, after all, a reluctant concession to "humanitarianism." Not only is the programme futile, it is not aristocratic. A genuine aristocracy must be able to maintain itself in the face of criticism. The power of ideas is their power to convert; not their power to please—on this point we can agree heartily—but their power to convert even the unwilling by the appeal to reason. The appeal to reason presupposes, however, some respect for the intelligence of those to whom it is made.

One of the difficulties in coming to terms with Mr. More lies in his use of the term "democracy." As a classical scholar, he seems to have followed a usage too narrowly etymological. For Plato, "democracy" was simply the rule of the mob; and the political demagogue who, in our day, proves his democracy by a noble and well advertised refusal to wear evening dress, is still the Platonic sort of democrat. Meanwhile the term is used quite as often, as the mark of a political and social ideal, by those who would abhor the appeal to the mob. For them it stands for the free and fearless discussion of opinion and for a state of society in which every one has the chance to show what he is worth. In this sense democracy is not only compatible with aristocracy, but the presupposition of any *natural* aristocracy. Perhaps this is the "better democracy" that Mr. More has in mind. At any rate, we may agree upon the statement that the cure for humanitarianism is intellectual courage.

PERSIA.

A History of Persia. By Lieut.-Col. Percy Molesworth Sykes. With maps and illustrations. 2 volumes. New York: The Macmillan Co. $15 net.

The need of an up-to-date history of Persia has long been felt as a desideratum; and Col. Sykes, now Sir Percy Sykes, has at last supplied the lacuna by two important volumes. His twenty-one years of official residence and travel in the Land of the Lion and the Sun as a representative of the British Government, together with special studies and researches as a scholar in the field of Persian lore, have combined to qualify him in a marked degree to fulfil the task. The dedication of his *magnum opus* to British administrators in India and at Whitehall is a mark of distinguished appreciation of governmental recognition of the historical and political importance of Persia; and between the lines may likewise be read a direct sympathy with Persia itself, born of a long residence among its people and fostered by a knowledge of the ties that bind East and West together.

The Persia of antiquity, or Iran in its broadest sense, though shrunk to its present minor measure, was the greatest Power with which the Western world came into contact and conflict in ages past. The country has never lost its significance for those who watch historically and politically the chances and changes in the Region of the Dawn. Kingdom after kingdom has passed away, dynasty after dynasty succeeded one another, in the more than three thousand years of

its history, but never without having some bearing upon the relations between Orient and Occident. Especially is this true at the present time because of Persia's geographical connection with India and the adjacent domains in Central Asia, both of which England and Russia watch over to-day with keen statesmanlike interest. It is no wonder that some eight years ago they formed together an Anglo-Russian *entente* with regard to their respective spheres of influence in this country which possesses economic possibilities yet wholly undeveloped, especially as Persia is still entirely without railways.

Almost all of the historic writers on this country of a mighty past and vast extent that once reached from Greece on the west to the river Indus on the east, and from Egypt and Arabia to the borders of Turkestan, now under Russian sway, have been used to excellent advantage by the author in compiling his noteworthy work. The Greek and Roman classics combined with Oriental sources, old and new, come in for due consideration. But among Sir Percy's more immediate English predecessors as historians in this particular field may be mentioned Sir John Malcolm, whose "History of Persia," however, was published as long ago as 1829 and has been out of date for years. Well-known, of course, is the monumental work by Canon George Rawlinson—"Five Great Monarchies"—but that was written a half-century ago. Lord Curzon's "Persia and the Persian Question," though a storehouse of information of every kind for all times, has become so rare and expensive as to be accessible only in large libraries or on the shelves of special collectors. All of these facts help to make more important the appearance of the present two volumes. Among contributions from France the large work by Count Gobineau, dealing with the period of ancient Persian history, is familiar, yet that contribution appears not to have been consulted in the preparation of the first volume, although other French writers on special phases are frequently quoted. The fact, perhaps, that Russian articles on particular historic aspects connected with the main theme are not easily available may account for their not being listed in the comprehensive bibliography given at the end of the second volume. Yet throughout the work one misses any reference to the noteworthy writings on the history of Persia by two such late German authorities as Justi and Horn, as well as to the researches of Eduard Meyer in regard to the era when Persian power was at its zenith in antiquity. But these omissions may be due simply to chance, for Nöldeke and Gutschmid are cited, each in his special line of research. This incidental criticism, however, is made only as a passing comment before turning to the work itself as a whole, which is altogether deserving of the highest praise.

To sweep swiftly the scope of the entire work the author has given in the first volume an admirable and critical survey of the history of Iran from the dim past when the relations of Elam, Media, and Persia began to be historical and called forth ultimately a Cyrus the Great and his successors, onward through the centuries before and after Christ until the cataclysm came in Persia's national development, about 650 A. D., through the Mohammedan conquest of Iran by the Arabs. In this volume the subject of myths, legends, and presumable historical data for early antiquity receive appropriate attention. Photographic illustrations and sketch-drawings made from prehistoric remains, accompanied also by replicas of ancient cylinders, bas-reliefs, and inscriptions, lend life to the pages, while pictures taken to-day by the author's own camera are interspersed to show survivals of ancient conditions at the present hour. All this, again, owing to the author's direct knowledge of the country, helps to give a vivid touch to his pen. The mighty empire of the Achæmenian kings, Cyrus, Darius, Xerxes, and their followers, lives anew betweeen the lines. Persia's attempted conquest of Greece and the later invasion of the East, as a return visitation, by Alexander the Great become actual realities and have lessons to teach for all time. The wars later between Parthia and Rome have likewise messages to convey; while the fall of the Sasanian monarchy, which ruled over Persia from 224 A. D. to 650, destined to destruction by the Arab sword, is not without significance for the philosophic historian.

Persia to-day is Mohammedan; it has been so in religion more than twelve hundred years. The Moslem victories at Kadesia and Nihavand, in 636 and 642 A. D., proved to be a turning point in the nation's history. But it was still a *Persia rediviva*, despite the rule of the Islam Caliphs. The Abbasid, Saffarid, and Samanid monarchs still reflect elements of the real power in the country; the Turkish power of the Ghaznavids and later the Seljuks never destroyed the true Persian spirit, any more than did the Mongol deluge and the conquering sword of Tamerlane. These various historic epochs, including the rise of the Safavid dynasty, are treated in more than a score of chapters in the second volume, which comes down to the renowned era of Shah Abbas the Great, the contemporary of Queen Elizabeth and of King James.

The subsequent events in Persia's history are then followed with equal care by the author down to our own times, when a Constitution was granted to Persia in 1906, the old order giving place to the new, but as the author adds in conclusion: "What the future may be, whether Persia, which gained so bloodless a victory over absolutism, will prosper under a constitutional form of government or not, lies on the knees of the gods."

The excellent small maps in this volume, and the large pocket maps at the end, combined with the same high quality of illustration, photographic, lithographic, wood-cut, and colored reproductions, together with chapters on Persian literature, art, and architecture, enhance its value just as in the case of the first. The entire work, from beginning to end, is of great importance and entitles its author to a first-rate rank among historians dealing with the East.

NOVA ROMA IMMORTALIS.

Constantinople, Old and New. By H. G. Dwight. New York: Charles Scribner's Sons. $5 net.

The city by the Bosphorus is possessed of undying charm. For more than four hundred years scarcely a decade has passed without the publication in some western European language of a description of Constantinople or the life and government centred there. A ruin, yet inhabited and very much alive, borrowing from the West but full of the glamour of the East, commanding land routes and sea ways, poor and wealthy, beautiful and corrupt, Christian and Moslem, polyglot and particolored: Stamboul calls forth from the soul of every observer an individual response. Busbecq and Lady Mary Montagu pictured its life and pageantry; Evliya Effendi described it as seen by Turkish eyes; Gibbon drew it well, never having looked upon it; Spandugino and Rycaut, D'Ohsson and von Hammer, and others in legion, described the government and manners of its rulers, the Turks; Gyllius and Van Millingen wrote of its antiquities, Murray and Baedeker of its existing sights; Racine made the city the scene of tragedy; Byron, Fikret Bey, and Mrs. Poynter embodied it in poetry; Scott, Crawford, and Wallace used it as the scene of fiction; Pierre Loti and Demetra Vaka wrote fiction about it, which they called fact (and only the experienced can attempt to distinguish these); Hamlin, Goddell, and Washburn narrated their experiences as missionaries and educators there; Dr. H. O. Dwight, Sir Edwin Pears, and Sir Charles Eliot have recently described the city's imperial dominion; Gautier and Grosvenor pictured comprehensively its palaces and pleasure-grounds, its temples and tombs; Miss Jenkins, Stanwood Cobb, and Ahmed Emin Bey have lately shown aspects of its life; and who shall enumerate the war correspondents, the sojourning travellers, and the endless procession of historians that have tried to exhaust its possibilities, and have failed?

Mr. Dwight joins this great company humbly, in the garb of an impressionist. He is worthy, because he brings his own distinct contribution; he portrays only what he has seen and loved. Even where, as now and then in the chapter on the Magnificent Community, his style runs a little too closely parallel to that of a guide-book, every detail of the material bears his own touch. His manner is happiest, perhaps, in describing "The City of Gold" and "A Turkish Village," where he has resided; next, it may be, in portraying "Stamboul" and "The Golden Horn." The numerous new and well-chosen illustrations are intimately adapted to the text. One might sometimes wish for a little less avoidance of

beautiful scenes which have often been described, but this rare fault is incomparably superior to its widely prevalent opposite. Mr. Dwight's impressionism is of a practical, shall one say, of an *American* sort. Compare him with Kinglake. The latter is dateless and almost factless. Though he spent a considerable time in Constantinople, what he tells of it may almost be summed up in the following words ("Eothen," ch. 3, *ad finem*): "It happened to me one day to mount the high grounds overhanging the streets of Pera. I sated my eyes with the pomps of the city and its crowded waters, and then I looked over where Scutari lay half-veiled in her mournful cypresses. I looked yet farther, and higher, and saw in the heavens a silvery cloud that stood fast and still against the breeze. . . . I saw and acknowledged the snowy crown of the Mysian Olympus!" Mr. Dwight has no fear of dates or facts; his impressionism is at times self-conscious and almost artificial, and its total effect is to provide a pleasing atmosphere. But the atmosphere is indeed that of Constantinople, for he belongs to the race of men whom he describes, "that is curious about the ways and thoughts of other men and feels under no responsibility to change them, that can see happy arrangements of light and shade, of form and color, without having them pointed out and in very common materials, that is not repelled by things which look old and out of order, that is even attracted by things which do look so and therefore have a mellowness of tone and a richness of association." "It pleases me," he says, "that all the people in the world are not the same. It pleases me that some are content to sit in coffee-houses, to enjoy simple pleasures, to watch common spectacles, to find that in life which every one may possess—light, growing things, the movement of water, and an outlook on the ways of men."

Mr. Dwight conducts his readers in a leisurely way about the old city and its environs. Such obvious sights as the great mosques, the walls, and the bazaars are presented, usually, in a new light; witness his rhapsody on the walls (pp. 111-112). His enthusiasm, however, is rather for unfrequented paths and seldom-studied works of man: for the Turkish dwelling-houses, with their projecting upper stories, latticed windows, and red-tiled roofs, for the beautifully designed mural tiles of the mosques and tombs, for the innumerable private and public fountains, results of an alliance between art and charity (what admirable multiple bird baths might be made after the model of the Turkish *selsebils!*), for the varied and abundant shipping, for the coffee-houses and the mosque yards, and for the pleasant gardens and the picturesque cemeteries ("Life and death seem never very far apart in Constantinople"). He shows us the people on their holidays, fasting and feasting, praying and promenading, worshipping and dancing; and repeating the practices of classical Greece and pagan Turkestan and Arabia, in the belief that they are conciliating saints and angels and serving God and Allah.

At the beginning of the third chapter stands a spirited comparison of Constantinople with Athens and Rome, evoked by the feeling that justice has not been rendered to the first city. Her day came after theirs was done. In the matter of years, while Rome was a great capital for hardly five centuries, Constantinople has held imperial sway almost three times as long. If Athens was a centre of learning for a thousand years, the younger city, though lacking always the incomparable originality of the first two centuries of Athenian greatness, has been a focus and distributing station for knowledge during a millennium and a half. Nor does it seem likely that she will ever lose her actual rank, to such an extent as did both Athens and Rome in the mediæval age. Athens never had wide religious influence, whatever may be true of her philosophy; Rome was and is the centre of a great subdivision of the Christian Church; Constantinople has held first rank for wide areas of both Christianity and Islam.

The last three chapters are of a special character. The old city has been passing through seven troubled years, during which she has suffered from fire, pestilence, and famine, and borne two major revolutions, besides several *coups d'état*. In four wars which her Government has sustained, she has been threatened twice, and in the second revolution she was taken. Mr. Dwight makes no reference to the great war, but he was in the city during most of the previous vicissitudes. He tells of the "little golden age" of joy and fraternity after the first revolution, in 1908, and of the last *selamlik* of the old Sultan, the capture of the city, and the first going to mosque of the new Sultan, in 1909. The tone changes perforce with the Balkan wars of 1912 and 1913. "The hordes of Asia" pour through Constantinople in order to fight in Europe. Beaten in battle, they return, diminished, disheartened, wounded, and stricken by pestilence. With them come new hordes of refugees fleeing from Europe to Asia. Benevolent Europeans strive to keep them sheltered and clothed and fed. During this time the Greek patriarch, full of years, dies, and after much ceremony is put to rest, seated, like the dead Charlemagne, upon a throne. In concluding, Mr. Dwight, with nearly all who have known the Turks well, expresses the hope that they will be remade and their government regenerated.

Mr. Dwight lays claim to conservatism, but nevertheless feels joy in iconoclasm. He attacks with apparent success the tradition that the decorative tiles of the great Turkish period were not locally made, but were brought from Persia and Rhodes. He believes that seven hills cannot be found in Stamboul, except in an artificial topography borrowed from the elder Rome. Perhaps he goes too far in denying the paramount influence of the Church of St. Sophia over the designs of the great mosques. He certainly appears to have overlooked some color effects when he says that the city is "in tone one of the soberest." As seen from a height on a clear day, it shows indeed weathered wood, gray stones, and domes surfaced with lead; but these are brightened by the sunlight, and interspersed under the blue sky with red house-roofs, green trees and gardens, and glimpses of waters whose deep blue is broken by white wings of birds and sails of ships.

The book contains a few defects and errors. The delightful style is occasionally unpolished or obscure. Mr. Dwight is fond of giving derivations, but is not always accurate: *Beshiktash* means not "five stones," but "cradle stone"; Evliya Effendi explains that a Christian church which formerly stood there contained the stone upon which the infant Jesus had been for the first time bathed; *Tekfour*, rather than meaning the "crown-wearer," is a Turkish corruption of the Greek words *τοῦ κυρίου*, "of the lord"; *Galata* may bear some relation to the late Greek word *γαλατᾶς*, a "milkman." The head of the Venetian community in Constantinople was a *Bailo* rather than a Balio. *Khurrem* was not the mother of Suleiman's eldest son Mustapha, but was Roxelana under her Turkish name. The historical excursions are not always interesting; that concerning the patriarchs of Constantinople seems out of place among the recent events of the last chapter. At the end of the book is a useful list of the "Masters of Constantinople," and an incomplete but good "Constantinople Book-Shelf."

Notes

"The Foreign Relations of the United States," by Willis Fletcher Johnson, is announced for publication early in the new year by the Century Company.

Robert M. McBride & Co. announce for immediate publication "American Rights and British Pretensions on the Seas," compiled, with introductory chapters, by William Bayard Hale.

M. Paul Sabatier's recent lectures at Bedford College, London, have been published in volume form by T. Fisher Unwin under the title "A Frenchman's Thoughts on the War."

"Industrial Leadership," by H. L. Gantt, will be published shortly by the Yale University Press, which also announces the publication of the late Professor Lounsbury's "The Life and Times of Tennyson, 1809-1850."

G. P. Putnam's Sons will publish shortly "The Blinded Soldiers' and Sailors' Gift Book," edited by George Goodchild, and "The Rights and Duties of Neutrals," by Daniel C. Brewer. The same house, as agent for the Cambridge University Press, announces the publication of the following volumes: "Selections from the Poems of Percy Bysshe Shelley," edited by A. Hamilton Thompson; "Selections from the Poems of John Keats," edited by the same; "North America during the Eighteenth Century," by T. Crockett and B. C. Wallis; "Collected Papers on Spectroscopy," by G. D. Live-

ing; "Passages in Prose and Verse from German Literature of the Nineteenth Century (1800 to 1870)," selected by M. E. Weber; "Archæological Excavation," by J. P. Droop; "Euclid's Book on Divisions of Figures," with a Restoration Based on Woepcke's Text and the "Practica Geometriæ" of Leonardo Pisano, by Raymond Clare Archibald.

Poultney Bigelow's "Prussian Memories, 1864-1894" (Putnam; $1.25) run a sprightly course, not always in the best taste, but always diverting and not seldom instructive as to present tragic events. As the son of the American Minister young Bigelow was the playmate of the present Kaiser, and for years his friend. He has seen him near at hand, in court, yachting, on manœuvres, and in intimacy. Mr. Bigelow will doubtless be criticised for what he has revealed of Imperial *personalia*. We think he should have a counter credit for what he has abstained from saying. Mr. Bigelow's experience with the public machinery of Prussia, from the time when he was cuffed at school for keeping head up during the *Vater unser*, are both humorous and enlightening. They make one realize the preposterous regimentation of life in Imperial Germany. Reminiscences of the stage, including Edwin Booth's tour in Germany, vary the generally political tenor of the pages. The general temper of the comment may be seized from this note on German unclubableness:

> The curious will note that such clubs as the Athenæum and Reform in London, or the Century and Union in New York, not only are lacking in Germany, but are inconceivable in Berlin, Munich, or Cologne. A club presupposes personal dignity and equality. Imagine if you can a club in New York or London where every member had to rise and salute whenever a person of superior rank passed through the rooms.

This view is reinforced by an account of the difficulty which the author once had in visiting the Kiel Yacht Club, of which he is a life member, though he approached from the water and wearing the club cap.

Will the experience of the United States be of any service to those who, when the battlefields are silent, must be called upon to reunite the shattered amities of Europe? That is the question which David Jayne Hill asks and undertakes to answer in "The People's Government" (Appleton; $1.25 net). In brief the author examines anew the fundamental concepts of statehood, law, and citizenship. The discussion is in part historical, tracing the evolution of the state from the earliest times, and in part systematic or analytical. The nature, sanction, and supremacy of law, the relation of law to liberty and property, the scope and efficiency of constitutional guarantees, the American doctrine of judicial supremacy—these and many other related topics are reëxamined in the light of contemporary political facts and tendencies. Dr. Hill's task has been to throw aside the husks and to uncover the kernels: on the whole he has done his work carefully and well. The discussion is throughout sane and practical; the style is good, and the book, indeed, is one which any thoughtful reader should enjoy.

For more than a year a committee of prominent Englishmen, under the direction of Lord Bryce, has been studying the possibility of eventually developing out of the present European mêlée some form of peace insuring international polity. As a member of this committee Mr. J. A. Hobson has given the subject much careful thought, and some of it now finds expression in a volume entitled "Towards International Government" (Macmillan; $1 net). The author does not state conclusions, but he does set forth various tentative proposals and argues plausibly in support of them. He is well aware that no enduring international amity and no effective agreement to reduce armaments will ever be possible so long as national policy is actuated by those motives which have everywhere guided it in the past. We must first procure, accordingly, a reversal of those motives. But how can that be accomplished? Fundamentally, in Mr. Hobson's judgment, it can only be accomplished by bringing to pass a situation in which no increase of a nation's armed forces will make aggression more likely to succeed. And no slight task that would be. It would involve huge readjustments, both political and economic. The larger portion of the book is devoted to a speculative consideration of the practical steps towards this end. The feasibility of a "social contract of nations," the personnel and jurisdiction of an international court for the settlement of disputes, the efficacy of the economic boycott as a weapon for enforcing its decisions, and the relation of internationalism to democracy—these are some of the matters dealt with in detail. There is an earnest plea for more publicity and more popular control in the conduct of all international affairs, for the handling of foreign policy "upon the same footing of decent, reasonable settlement that prevails in every other human relation." Whatever the outcome of the war, it will in any case, if Mr. Hobson predicts right, bring into being a popular outburst against the old arts of diplomacy with the earmarks of secrecy, intrigue, exclusiveness, and antagonism. The book is interesting, hopeful, and free from any touch of partisan bitterness.

When H. G. Wells, in "The Passionate Friends," wishes to indicate the vision and beneficence of his hero, he has only to attribute to him the actual enterprises of our modern publishers of books, who are vieing with one another for the opportunity of supplying the wit and wisdom of the world to readers of large appetites but small incomes. This movement in the earlier phase provided editions of the classics, like the "Banquet" of Plato or the "Essays" of Bacon, at the price of a breakfast or a couple of Sunday newspapers. In its later phase, well represented by Henry Holt's Home University Library, it attempts to bring popular knowledge up to date by furnishing inexpensive, readable, expert introductions to periods of history, aspects of science, problems of philosophy, and the like. Mr. Holt's newly launched fifty-cent series, Writers of the Day, is in effect an extension of the modern wing of the Home University Library. In this series the works of living notables are to be discussed by fellow-workers of a younger generation. Three volumes have now been issued: "Anatole France," by W. L. George; "H. G. Wells," by J. D. Beresford, and "Arnold Bennett," by F. J. Harvey Darton. The ingenuity of the scheme lies in the fact that each author, while introducing his relatively illustrious elder, indirectly introduces himself; and the way he sets himself off from his subject is not the least interesting feature of his performance.

Mr. George, who as a novelist is an avowed disciple of H. G. Wells, brings in Anatole France with a certain jaunty condescension both to the Frenchman and to the English-speaking public. He tells us all in a breath that he has "read very little about" his subject, and that "people are afraid to criticise Anatole France adversely"—he is "acclaimed all over the world." Obviously Mr. George has not observed the recent French attacks upon M. France's position, represented by such mordant criticism as that of Michaut and Giraud. He writes, in other words, as if unaware that there is a "younger generation" in France as well as in England. He is grateful to the present war for furnishing him a background of beer, sweat, fine courage, and self-sacrifice against which to contrast "the dapper quality of the great Frenchman's thought." He is grateful, also, to the British public for furnishing him a background of moral idealism against which to contrast the inveterate sensuality of the Gaul. "I have come to think," he says, "that, if we differ at all from the brute, it is by the courage with which we face the consequences of our deeds, by delicacies of feeling in which caresses have no place, by something that is more than elegance, that can maintain love when sickness, ugliness appear, and æsthetics fall to the ground. There is not in the works of Anatole France a line devoted to love." This is no doubt very firm and just. The injustice consists in the intimation that no Frenchman could possibly see the point of that criticism. As a matter of fact, M. Michaut's book concludes with exactly the same judgment: "From beginning to end . . . *son œuvre est vouée au Désir et à la Volupté.*"

Mr. Beresford, author of several realistic novels of serious intention, introduces Mr. Wells with words of high admiration for his general spiritual attitude and endeavor, but with qualified praise for his accomplishment in fiction. He is ready to maintain that Wells is second to none as a writer of the fantastic romances which he produced in the earlier part of his career. But he adds: "I am less certain of his position as a novelist." "On the one hand he is inclined to idealize the engineer and the scientific researcher, on the other to satirize, and, in effect, to group into one sloppy-thinking mass, every other kind of Englishman, not excepting philosophers, politicians, and social reformers." He will not live, thinks Mr. Beresford, by virtue of his characterizations. His virtue resides in his fecundity, his mastery of language, and, above all, in his "pointing the possible road of our endeavor." "Through all his work moves the urgency of one who would create something more than a mere work of art to amuse the multitude or afford satisfaction to the critic. His chief achievement is that he has set up the ideal of a finer civilization, of a more generous life, than that in which we live; an ideal that, if it is still too high for us of this generation, will be appreciated and followed by the people of the future." One may quarrel with the prophetic part of this sentence, without in the least denying that many of Mr. Wells's readers rise from the perusal of his works with a singular elation of the heart and a conviction that they have participated in a miraculous and authentic feast of Pentecost.

Mr. Darton, author of "Tales of the Canterbury Pilgrims" and "The Wonder Book of Old Romance," presents the historian of the Five Towns as a literary phenomenon of

grave and indeed almost appalling significance. In his attempt to do justice to a writer with whom he finds that he has little or nothing in common, he gives us a good deal of rather sharp criticism. One enjoys his manly endeavor to conceal his unconcealable feeling that Mr. Bennett is a literary "bounder" of talent. He springs up in an industrial civilization; he matriculates at London University, "that august negation of the idea of a university"; he is impregnated with the egoism and pride and push of his social *milieu;* he writes 335,340 words a year, and brags of it; he is hungry for success and quick returns in cash. With him we behold the dreadful advent of the novel about the middle class, by a man of the middle class, and written from the middle-class point of view. The work is ugly, gray, coarse, gloomy, oppressive; but it is honest, efficient, inexorable, brave, imposing. It is permeated by the sturdy English spirit of liberty. Perhaps the most interesting passage in Mr. Darton's book is his general characterization of the new school of fiction: "In the new school there is neither high nor low. Nor is there a necessary beginning or end, except the beginning of birth and the end of death. The characteristic achievement is controlled mass. A modern novel is like a modern battle. A thousand circumstances vibrate and vanish, sometimes with little apparent inter-connection. So vivid and real are the details that often they, and not the whole movement, linger in the memory. Even at the 'end' the reader may be vague. But the reader and the novelist have taken part in a battle of the soul. They have seen life together, and the reader, willy-nilly, has had to face what the author decrees to be reality."

A memoir of Elizabeth Buffum Chace, one of the finest spirits of the anti-slavery agitation and for fifty years a foremost citizen of Rhode Island, is altogether welcome because of its subject and her friendships with the leaders of the greatest moral agitation of our time. But the two volumes published by her daughter, Lillie Buffum Chace Wyman, and Arthur Crawford Wyman (Boston: W. B. Clarke Co.; $8) bring a distinct disappointment, in that they give no connected picture of Mrs. Chace or her time. They are made up chiefly of extracts from letters from and to Mrs. Chace, many of which are without value or significance. Others are, however, of distinct historical value and, as a whole, the work indubitably throws an interesting sidelight upon the chief personalities of Mrs. Chace's times. But so remarkable a woman and so devoted a worker in the anti-slavery cause, when to be affiliated with it meant social ostracism of the worst kind and the risk of personal violence, deserved a better record of her manifold civic activities. Descended from one of the oldest colonial families, she was an untiring reformer even when she had passed fourscore years and ten, and being the daughter of the first president of the New England Anti-Slavery Society was, as she herself said, "born and baptized into the anti-slavery spirit." These two volumes of her doings and writings are admirably illustrated by pictures of the anti-slavery leaders who were Mrs. Chace's admiring friends and devoted associates.

Is there any hope for colleges and college education, on evil days though fallen and evil tongues? No longer need any one wonder or analyze. Mr. Seymour Deming has solved the problem once and for all in "The Pillar of Fire" (Small, Maynard; $1 net). Amid much Carlylean diatribe he discovers the solution in the answer to the question, "How can the college be brought back to its rightful task—the teaching of revolutionism?" He can easily explain why it doesn't train I. W. W. orators now. "Contemplate, if you will, these professorial gentry who, from the serene altitude of a square meal yesterday, to-day, and forever, sound alarums against a too precipitate mending of the machinery for fear the fly-wheel, if suddenly stopped, may burst; and when it does burst, at Lawrence, or Paterson, or West Virginia, or Calumet, or Ludlow, and then when the working class puts forth leaders as naturally and as spontaneously as a tree puts forth fruit, these, our trainers for leadership, exclaim in dismay that 'democracy is unsafe unless the masses will submit to rational guidance.'" He can also explain why his own piercing vision sees all this so clearly where many life-long students of education gaze at the situation as through a glass darkly. "Young people," he assures us, "marvel at the sorry showing made by our faculties and presidents as thinkers when they address themselves to 'current political and economic questions.' They are dazed to hear some ragged tyro of the soap-box put their great academic gods utterly and unmistakably to rout, and, what is more, do so with that grim humor which is an unfailing token of intellectual mastery. The simple reason is that the soap-boxer has got one or two fundamental facts right, and that the college president has been obliged by his responsibility for an institution to get the same one or two fundamental facts wrong." It is surely a great comfort to have the vexed waters finally stilled beyond the peradventure of further debate.

Prof. Edward Hall Gardner, in his "Effective Business Letters" (New York: The Ronald Press; $2), assures us that "there is no difference between 'business English' and good English." This will be cheering news to those who receive, and much-needed information to the many who still write, letters like the following: "Your esteemed favor of 16th ult. at hand and contents carefully noted. In reference to your complaint, we beg to advise that our Mr. Jones will call on the 10th inst. to explain the proposition as per ours of the 13th, which you evidently misunderstood. May we kindly ask you to fill out meantime the enclosed blank for our information and oblige. Yrs. respectfully." The foregoing is not quoted from Professor Gardner's book, but it contains no less than sixteen stock phrases through which thousands of business men show that they do not know the difference between business English and bad English. They are exposed in Chapter V of Professor Gardner's book, where will be found many other examples of the peculiar jargon which is going out of style. "Effective Business Letters" is a good textbook, in that it instructs and informs, with abundant sub-headings and examples, and does not go into lengthy justification of the principles advanced. Part I discusses general principles in simple terms adapted to the beginner's understanding. Part II takes up the mechanics of the art—make-up, heading, address, spacing, paragraphing, punctuation, paper stock, envelopes, etc., with a chapter on mistakes in language, to which we have already referred. Part III goes into more explicit directions for specific types of letters, and deals as much with the thought as with the form. In Part IV the author returns to general principles, but now speaks of unity, coherence, emphasis, and other general aspects of the subject which more properly follow than precede the elementary instruction of earlier chapters. There is much valuable information for the business correspondent in this book.

The latest Jonson play in the list of Yale dissertations is "A Tale of a Tub," edited by Prof. Florence M. Snell (Longmans, Green; $2.50). The principal problem arising from this rustic comedy, with its lively Valentine's day scramble for the hand of the fair Awdrey, is one of date. Licensed in 1633, and palpably hitting, even though the licenser "struck out" much of the satire, at Jonson's erstwhile collaborator, Inigo Jones, the play has nevertheless been regarded by most American scholars, following Collier and Fleay, and by its recent editor, Scherer, as an early play of Jonson's, which late in life he pressed into service, with a few additions, as a vehicle for his spleen against the famous architect and masque-maker. Miss Snell contends, a view already in the field, that the play "stands where its licensing in 1633 puts it, as Jonson's last work for the stage." She fails to find any metrical differences between the old and supposedly new parts or between this play and the rest of Jonson's later work; and she refuses to attach any significance to the curious "scene interloping." In the end it is hardly more than a toss of the coin whether one shall account for the inferiority of the play to Jonson's best work on the score of his 'prentice or his failing hand. On any view of its date, the play is interesting as being something of a *tour de force,* a conscious attempt to reproduce the atmosphere of the early years of Elizabeth. Professor Boas has recently adopted a similar view of "Gammer Gurton's Needle." The Elizabethans are not traditionally credited with very much of this kind of literary artifice.

HOLIDAY BOOKS.

Holiday books received too late for mention in our special Holiday Book Number include "Beautiful Gardens in America" (Scribner; $5 net), in which the author, Louise Shelton, furnishes, besides a pleasant descriptive text of nearly 350 pages, 170 large photographs and six full-page reproductions in color. Just to turn over the pages for the lovely illustrations is a great treat in itself.

A grim presentation of the horrors of war is to be found in Vernon Lee's "The Ballet of the Nations, a Present-Day Morality" (Putnam; $1.25 net). Satan is made the leading agent, and his lieutenants are Rapine, Lust, Murder, Famine, Self-Righteousness, etc. With such a crew as instigators, it is not difficult for the talented author to set the nations of the earth in a dizzy whirl, which puts in the shade even the doings of the notorious Deadly Sins. A pictorial running (rather leaping) commentary is furnished in stunning, if also lurid, brick and white. The volume is dedicated to Romain Rolland.

Messrs. Hinds, Noble & Eldredge have done a real service by putting forth in attractive form "The Most Popular Mother Goose Songs" (60 cents), with the traditional English airs. The illustrations which border each page are, it seems to us, in strict accord with what we conceive the Mother Goose spirit to be.

In "Romance of Old Belgium, from Cæsar to Kaiser" (Putnam; $2.50 net), Elizabeth W. Champney and Frère Champney have formed a text based upon the legendary and authentic history of this distracted country. Here is found such matter as the story of Cæsar's Nervian wife, the Four Sons of Aymon, Godfrey of Bouillon, Orange and Egmont, Rubens and Waterloo. Fact is mingled with fiction throughout, even when the events of the present war are reached. The attempt has been to adhere merely to Belgium's essential spirit.

Drama

PRONOUNCEMENTS OF A VETERAN CRITIC.

Vagrant Memories. By William Winter. New York: George H. Doran Co. $3 net.

This volume of "Vagrant Memories," the latest addition to the imposing definitive edition of the works of the veteran critic and poet, William Winter, is one of the most attractive and valuable in the whole series. It will be prized equally by the student, the amateur, the future historian, and the literary connoisseur. Eloquent and vivid in style, full and authoritative in detail, it offers a feast of brilliant description, solid criticism, and sage reflection. With some of his estimates of individual actors it is possible to disagree, but most of them are eminently sound, and for all of them he gives his reasons for the faith that is in him. In all cases he writes with the sincerity of profound conviction. It is in his incidental essays on the theatre, its art and functions, and on famous dramatic characters and their proper interpretation, that his encyclopædic knowledge of his subject and the deep thought he has bestowed upon it are displayed most impressively.

To the frivolous, ephemeral, sensational, or lewd plays, which have been so frequent during the recent years of speculative commercial management, he pays little heed. When he alludes to them it is to dismiss them with a few curt phrases of contempt or disgust. With him the stage is a serious, dignified profession, to which all the arts are handmaids, of which the abuse for vulgar ends is desecration. But he is no blind devotee of the ancient and classic. For all that is best in modern drama, gay or earnest, he has instant appreciation and approval. Far from being a pessimist, he records his deliberate opinion that the present decadence of the theatre is but a temporary phenomenon. But he asserts without hesitation that the actors of a preceding generation were superior to those of to-day, and in this verdict he will be supported very heartily by every one who is old enough to make comparisons between them. The modern actor is inferior, not because of less natural ability, but because, since the virtual disappearance of the stock companies, he has had no means of mastering the essentials of his art. Now this truth is beginning to dawn upon public conception.

Particularly interesting and instructive are Mr. Winter's remarks upon the acting of farce, comedy, and tragedy. He concludes that comedy imposes the most exacting test of histrionic art. He argues that the startling action, poetic conception, and vehement emotions of high tragedy so stir the imagination of the spectator that his judgment is blinded to minor defects in the execution of the actor, whereas, in comedy, in which the emotions are less galvanic, the critical and purely intellectual faculties are less disturbed, and therefore quicker to note shortcomings in the player. This is subtle and, as a general rule, probably true. Whether it can be accepted as a law universal in its application, is open to question. If so, then John Gilbert, for instance, by virtue of his Sir Anthony Absolute, which was as near to absolute perfection as any mortal work could be, might plausibly be pronounced the most proficient actor of his era. It supplies, however, a scientific explanation of the fact that more actors of moderate ability have acquired fame in tragic than in the great comic parts. On the other hand, it must be remembered that it is the greatest imaginative works, all tragic, that make the supreme demands upon histrionic interpretative genius, and that the fame of nearly all the acknowledged great actors, who shone in both departments of the drama —Garrick, Bannister, Phelps, Davenport, Macready, Salvini, and others—rests almost entirely upon tragic achievements. Executive perfection may be more necessary in comedy than in tragedy, but it is also more easily attained. Acting, in the last resort, can only be judged by its approximation to the loftiest creative ideals. There have been many wholly satisfying Sir Peter Teazles, from King to Gilbert—how many Lears? The new stage humor, says Mr. Winter, may be distinguished from the old by its lack of heart. It evokes laughter, but is hard, metallic, even cynical, and seldom appeals to the affections.

Many famous actors figure in the biographical parts of the book. A fine chapter on Matilda Heron contains a masterly analysis of the character and acting of that strange and gifted woman. There is also a very notable and just tribute to the sterling character and abilities of that almost forgotten actor, Mark Smith, who is classed with King, Farren, Got, Placide, Blake, Gilbert, and Warren. Of the last-named performer, William Warren, who for many years divided the honors of the old comedy stage with John Gilbert, Mr. Winter writes with loving enthusiasm. Of J. B. Booth and his son, Edwin, he has, of course, little to add to what he has written before. To the latter he pays a noble tribute and eulogy. He makes it plain that his failure with Booth's Theatre was due solely to the inordinate cost of the building. His productions were richly remunerative. Another interesting paper gives an intimate personal study of that ambitious, indomitable manager, Augustin Daly, which only Mr. Winter could have written.

His dictum that Henry Irving was the greatest actor of whom there is any record must be questioned, eloquently as he writes in support of it. But he was extraordinary as actor, manager, and man. He was the dominant figure of his theatrical period, and the value of his services to his art and his profession could scarcely be overestimated. Intellect, courage, and personal fascination constituted in him a rare individuality. His self-reliance was superb. He told Mr. Winter that his Shylock was "the best ever given." In Primrose, he said, "there was too much waiting. It did not enlist his full powers." Of his Dubosc he remarked that "all the Bill Sykes parts are easy." Corporal Brewster, he complained, was "utterly selfish." His greatest performance, he asserted, was his King Lear, which was "psychological."

A notice of this book must not close without reference to a pungent and admirable pronouncement on Church and Stage and a brilliant analytical essay on the character of Hamlet.

J. Ranken Towse.

"MAJOR BARBARA," AT THE PLAYHOUSE

Mr. Shaw has never been afraid of the improbable. He creates a bizarre situation swiftly and with entire assurance that it will be accepted as real. Unlike the pseudo-realist who wastes much time trying to relate his characters to a known world, Shaw sweeps the world clean of all personages but his own. Whether or not the impression of actuality is thereby furthered, the method has the distinct advantage of leaving plenty of opportunity for unhampered dialogue. The dialogue in "Major Barbara" has an ease which is almost abandon; yet only at the close of the final act, when it is necessary to draw up the arguments into some sort of a conclusion, is there any sign of faltering. The play then for a few minutes becomes talky and aimless. Not that the author has had throughout any very definite goal, but up to this point he has made the audience think that he had one. "Major Barbara," in emphasis and general proportions, is not unlike "The Doctor's Dilemma." Neither play is pure fooling. Out of the merry popping of nostrums emerges not a little shrewd sense; yet neither work does more than rake a few trenches, and there is no attempt to "consolidate" a new position.

If "Major Barbara" had been written yesterday, instead of eight or ten years ago, a large part of its discussion could not have been more timely. This has to do with the moral value of manufacturing munitions of war and selling them to any bidder, regardless of the justice of his quarrel. The Undershafts are the Krupps of England. In the long tradition, reaching back to the seventeenth century, of their pursuit of this special industry, the head of the house in each generation has been a foundling, and in each instance the wife has separated from him because of his determination to disinherit his legal heir. In the play Lady Britomart has the additional reason that her husband preaches immorality, but never practices it (a stab, by the way, which the author may have directed at himself). Of the two daughters, one is Barbara, who has joined the Salvation

Army with the fervor of a true convert. Associated with her in this organization is her fiancé, a professor of Greek, who is willing to beat the drum because of his love for her, and because he is a "collector of religions." An inveterate cynic, he carries on a rare duel with Undershaft, who is smart enough to justify his two consuming tenets: adoration of riches and belief in protection by the use of might. But the real clash is between father and daughter. He agrees to visit her Salvation Army post provided she will come and look over his huge plant. We need not indicate the line of reasoning whereby, in the scene at the post, he robs her of faith, nor that by which, at the plant, she is made to see the constructive value of her father's work and the opportunities that it offers for humanitarian endeavor. It is all very clever—too clever by half—yet the entertainment it provides is perhaps above Shaw's average.

The production of the play was remarkably finished, and once more proved the possibilities of a well-picked stock company. Miss George herself put much spiritual warmth into the part of Barbara. No one could make the rôle quite vital. Ernest Lawford was again excellent as the professor of Greek, and Louis Calvert, for whom the part of Undershaft was written, made it commanding, except when he occasionally stumbled over his lines. A novel rôle for Conway Tearle was that of a White Chapel thug somewhat curious about religion, which he enacted with much skill. For the character of Lady Britomart, Charlotte Granville had been specially engaged. If space permitted, it would be interesting to examine at length two or three of the minor personages of this extraordinary play—those who are but loosely connected with the central theme. They seem to indicate that, if Shaw did not forever have a propaganda up his sleeve, he could do some pretty character study. F.

Music

THREE PIANISTS AND KREISLER.

Musical entertainments in New York—not Greater New York, but just Manhattan—have lately been offered at the rate of six a day. Partly, this excess of supply over demand is due to the fact that many of the minor musicians follow the example of the great ones in giving two or more recitals, with the obvious object of impressing concert-goers in other cities with the fact that they appeared repeatedly in the metropolis. Of the artists who give several recitals because there is a demand for them, four have been heard within a week—Paderewski, Percy Grainger, Ossip Gabrilowitsch, and Fritz Kreisler.

A few days before Paderewski came to New York for his second recital, there were reports from Boston of a performance he gave there which not only made the audience "wildly enthusiastic," but made him admit that he himself was satisfied with what he had done. One of the leading critics, Olin Downes, declared that Paderewski to-day "is truly stupendous and might be called, without hysterical exaggeration, the Over-man of the piano." As such he appeared also in Carnegie Hall last week. One sometimes hears the remark, especially among minor professional musicians, that Paderewski is not what he was twenty-four years ago, when he made his first tour in this country. They forget that they decried him then, too, with the instinctive aversion to genius that characterizes their tribe. At the age of fifty-four one could hardly be surprised if he had lost some of his juvenile fire and impetuosity, but he has not; nor has his technique deteriorated in the least. On the other hand, his art has gained in maturity, and, even more than formerly, it has assumed the form and the charm of a perpetual improvisation. While he plays the notes as printed, he recasts them in his own mould, making them seem strangely different from what they are when others play them. He still has no superior as an interpreter of the older romantic composers, notably Schubert and Schumann; and in the realms of Chopin and Liszt he has no rival. He dreamed rather than played a Chopin nocturne at this last recital, and made a tragedy—the tragedy of Poland—of the wonderful étude, opus 25, No. 7. Of the Liszt rhapsodies he makes so much more in revealing their exotic charm than the other pianists do that most of them hardly dare to play them any more in public; which is a pity; but the future of these rhapsodies is as sure as that of the best of Beethoven's sonatas.

Percy Grainger has reminded not a few of Paderewski as he was when he first came to America. He has, indeed, in common with the great Polish pianist, the quality of genius—Grieg was the first to call the attention of the musical world to this Australian pianist's genius—besides a marvellous technique which never obtrudes itself, youthful enthusiasm, complete absorption in the music without a thought of the audience, a rare capacity for tonal coloring, with the aid of new pedal effects, and the art of clearly setting forth the content of a composition, however polyphonic and complicated. In their programmes and sympathies, however, they differ widely. While Grainger also adores the older masters, notably Bach, Chopin, and Liszt, he has made a specialty of Grieg, whom Paderewski has ignored, admires the modern and even the ultra-modern composers, from Debussy to Schönberg, intensely, and is a worker in the realm of folksong, whereas Paderewski plays national music only in the artistic reproductions of Chopin and Liszt, as well as his own pieces cast in the Polish mould (notably the enchanting "Krakoviak").

There is another point of contrast: whereas the Polish pianist is disappointingly coy about playing his own compositions in public, the Australian, fortunately, makes up his programmes largely of his own delightful pieces, many of which are based on British or Irish folk tunes. At his recital last week he also played, as a tribute to our Stephen Foster (whom he justly considers "one of the most touching and subtle melodists and poets of all time"), his own arrangement for piano of a composition by himself, based on "De Camptown Races." This was enjoyed by the audience as much as were "The Leprechaun's Dance" and "Maguire's Kick," arranged for piano by Grainger from Stanford's "Four Irish Dances." No one plays Irish music as Grainger does.

Ossip Gabrilowitsch, a great pianist of still another type, is so cosmopolitan in taste and so free from jealousy that he has included pieces by both Paderewski and Grainger in the programme of the sixth and last of his series of recitals, illustrating the development of piano music from the days of the clavichord and harpsichord to the present time. That, however, will not be presented before March 11. The third of the series was given last Saturday before a crowded auditorium. Evidently the public was not frightened by the possibly "educational" implication of the word "historic." As a matter of fact, Mr. Gabrilowitsch has made up his programmes chiefly of compositions that have long been favorites. On this occasion four of the German romanticists were chosen: Schubert, Weber, Mendelssohn, and Schumann, whose scores gave this Russian pianist abundant opportunity to show his art at its best. His next recital on December 28 will be devoted to Chopin, and on February 24 he will boldly place in juxtaposition those two antipodes in music—Brahms and Liszt.

Fritz Kreisler's first recital of the season in Carnegie Hall filled not only the large auditorium, but the stage, too, with eager listeners, who compelled him, it is needless to say, to add half a dozen extra pieces to those named on the programme. Among these there was an unusual number of novelties. There were three pieces by Godowsky, whose name heretofore has been associated exclusively with the piano; a Rondino on a theme by Beethoven, composed by Kreisler, a charmingly simple and effective number which the audience insisted on hearing twice, and which in a few weeks will be played the country over; a Spanish dance, gay and Andalusian, by Granados; and, most important of all, Schumann's Fantasy for violin, opus 131. This work was left in a strangely unfinished condition. Joachim, to whom it is dedicated, used to play it, but he urged Kreisler to edit it and make it more coherent and idiomatic for the violin. This Mr. Kreisler has done. In a statement given to the press he explained just what he had done, closing with the words: "I approached the task with humility and wrought in reverence. I lived up to my ideals, and I trust I have not violated Schumann's, in this reconstruction and restoration." These words indicate the general spirit of Kreisler's habit of revising neglected masterworks of the past—all of them neglected simply because they lacked what he has given them; he has made them live as if they were inspired products of our own time. Nearly all other violinists have included them in their repertory, but if no one else plays them as he does, they nevertheless delight audiences the world over. HENRY T. FINCK.

Art

AUTUMN EXHIBITIONS.

LONDON, November 25.

The venerable old societies, like the British Artists and the Old Water-Color and the Institute, continue unperturbed in their venerable old ways, opening shows as like as could be to those they have been opening throughout the long, peaceful years of their existence, suggesting no comment or criticism that has not been made a hundred times before. The brand-new Post-Impressionism may have grown a trifle less aggressive, though Roger Fry has chosen this moment to break out with an exhibition of fifty-three exercises in "Abstract" and other "Design," some built up about bus tickets and bits of marbled paper with the diligence, but hardly the spontaneity, of the child who has just received his first present of a toy paint-box. The Royal Academy, after handing over several of its galleries to the use of the Red Cross, has decided not to give a winter exhibition this year, a decision that will affect its own pocket and the pleasure of the public rather than influence the tendency of modern art, for until last year the winter exhibition was devoted to old masters or to Academicians who had died within the immediate past. The necessity of not showing old masters is clear on the face of it at a moment when the masterpieces of private and public collections are being taken down from the walls where they belong and stowed away nobody knows where. A visit to the National Gallery these days is one of the most extraordinary experiences in an extraordinary London.

The exhibition of lithographs by the Senefelder Club at the Leicester Galleries is again the most interesting of the autumn exhibitions, as it has been every year since the Club was founded, except last, when it seemed as if, in the first fury of recruiting and organization, nobody would have a thought to spare for lithography and no exhibition was held. The members have therefore had two years to prepare for this new collection, and they are liberal enough to include the work of other artist-lithographers who are not members. I have written of the Club before this, of its part in reviving the art of lithography in England, and its success where the earlier attempts, though as zealous, of the eighteen-eighties and nineties failed. As Mr. Campbell Dodgson, keeper of prints in the British Museum, says in his preface to the catalogue, the members of the Club are enthusiasts for their beautiful art, they are determined to free it from the taint of commercialism and cheapness, they have proved that in modern times "it is not only Whistler who has made the stone to sing."

The exhibition establishes above all the infinite possibilities of the stone as a medium, for nothing is more striking than the variety in the effect, quality, and color obtained, as well as in the subjects treated. If strength, richness, in color is what the artist seeks, the stone will yield it to him with a fulness and a directness no form of engraving can surpass. Joseph Pennell, the president of the Club, shows this in his series of impressions of the strange, fantastic, all too seldom visited monasteries of Metéora in Greece—prints in which the lithographic chalk is used with equal ease to express the rugged boldness, the solidity, the heavy shadows of the curious cliffs and peaks upon which the monasteries are perched, and the delicacy and faint distances of the Plain of Thessaly that stretches away beyond them, every gradation from the purest black to the most silvery gray rendered as it would be impossible for the etcher to render it with his needle. Of actual color in the more usual sense, the examples are few, and still fewer those in which the artist aims at the elaborate arrangements that were so amazing in the color prints of French lithographers like Lautrec and Lunois and Chéret and the others whose prints were the glory of the Paris salons and streets some fifteen or twenty years ago. Spencer Pryse uses color in many of his prints, but sparingly, with an almost austere respect for technical limitations. It really serves him but as a wash to heighten and deepen the stronger passages in the composition. Two or three of his new lithographs are treated in this way. The most effective is Refugees in Calais, a large print, for he likes to work on a large scale, and not unlike more than one he has already exhibited. He is indeed in danger of being caught in the snares of formula, and his design, whether women bathing or Belgians in flight, people at the races or soldiers at the front, is apt to be built up on much the same lines. However, this new group of refugees, if reminiscent, is one of the best things he has done. Against a vague background two women are resting, one rigid, upright, as she sits there with a baby in her arms, the other half sitting, half lying down and leaning heavily against her, something monumental in their grouping, tragedy itself in their pose. Over the carefully modelled draperies of the two women a flat tint is laid of a deep, sombre, brooding red that intensifies the gloom and emphasizes the tragedy, though the slightest note of false or irrelevant color would have cheapened or ruined it. Anthony Barker has carried his color scheme much further in a small version of a scene on the Thames which, as a big poster, hung for a month last summer in all the underground stations of London. It was one of a series to which Pennell, Hartrick, Jackson, Becker, Kerr-Lawson, all members of the Club, contributed, and which told with startling effect in the midst of the horrible commercial posters that have long defaced the stations and hoardings of London, and the distressing recruiting posters that must be the despair of every Englishman who has the dignity of his country at heart. In the nineties, William Nicholson and James Pryde, figuring then as the Beggarstaff Brothers, Beardsley, and one or two others did what they could to redeem the London poster from vulgarity, but theirs was a short-lived experiment. That, after their failure, the managers of the Underground should have sought the services of the Senefelder Club explains that the Club has done something to educate the public, even if the public has such a talent for forgetting that the second experiment may be doomed to pass only less quickly than the first.

What can be done with wash, another method known, as all were, to Senefelder and practiced with wonderful results by many of the greatest lithographers, may be seen, in one or two of A. S. Hartrick's prints, more especially The Man on the Hill, 1914. The lithographer will study it with interest for the way the wash is treated, for the varied and expressive quality of the blacks got from it with such difference, such subtle truth, in the ploughed field, the solitary figure, the sweep of the clouded sky above; to those to whom the technical problem solved will mean nothing, the print must appeal by the dramatic treatment of the simple motive, something prophetic almost in the pose of the man alone there, waiting and watching on his windy hill-top. But there is not one of Hartrick's series that does not reveal the artist's love of his medium and desire to master its resources. This is true also of the work of John Copley. Like Spencer Pryse, he has gone to the war for inspiration. Refugees and recruits have supplied him with types that interest him, though his chief preoccupation seems to be less with them as types—less with the pathos of the weary exiles we have grown used now to seeing in England, less with the half-shamed, half-pleased first march of the men from the recruiting station, the familiar daily spectacle in the Strand—than with the forms and groups he discovers in them that can be woven into a consistent pattern, with the amusing lines, the spaces of white and black they suggest that require all the printer's as well as the draughtsman's art to take and maintain their proper value and place in the design. In the prints of Ethel Gabain the same concern with design, the same preoccupation with the lithographer's problem, is felt. From a simple gray interior and a single note of black in a figure, doing it matters not what, she will work out an arrangement on the stone that pleases by the very quiet and simplicity of the harmony and the absence of what is popularly known as meaning. She has repeated the one theme often, but this year, in The Wedding Morning, with the single figure, a bride in bridal gown, that allows of no note of black, she has turned to a new motive in the study of gray upon gray, more difficult to the lithographer than to the painter.

This interest in the medium for itself as well as for the subject it interprets is really characteristic of almost all the work shown—of the prints of C. H. Shannon, who has done little in lithography of late; Daniel

Wehrschmidt, Ernest Jackson, Miss Hope; of the two Belgians, Paulus and Poortenaar, who exhibit for the first time, I believe, with the Club. And it is because of this interest of the artists themselves that they stimulate the interest of others in their work. They have not dabbled with stones and presses, chalks and washes, stumps and scrapers, to make the pretty or topical pictures the public is supposed to like. They have used the stone because it could best express what they had to say, and because they were amused with the different ways their tools enabled them to say it, one experiment, one problem, leading on to still another. This may be the attitude distrusted in the near past when critics angrily protested against "art for art's sake," a phrase that has disappeared with its inventors. But it is the attitude of the true artist always, whether he may be called Classicist or Romanticist, Impressionist or Post-Impressionist, and so long as it remains his attitude the world can await with equanimity the part art is pre-ordained to play in whatever change the war is to bring in its train. N. N.

Finance

RETROSPECT OF THE STOCK EXCHANGE.

Exactly twelve months ago this week, on December 12, 1914, the New York Stock Exchange reopened, after having been closed during the eighteen weeks from July 30. Why the reopening had been so long delayed; why it occurred at just that date, and whether the reopening in itself reflected or indicated any positive idea that the things which have happened since then, in American finance, were likely to happen—these are questions which may reasonably be asked, in retrospect.

Going back in memory to the period which preceded the reopening, it is not difficult to recall the circumstances which delayed the reopening nearly five months after war broke out. Having been closed in order that the panic which raged on Europe's markets should not be converged upon New York, the avowed ground for not reopening was the fear that the hundreds of millions of American securities owned abroad might be thrown on the New York market, breaking down the whole structure of security values and paralyzing the finances of the country.

How seriously that possibility was regarded, even after Europe had passed out of its own acute stage of panic, was illustrated by the suggestions actually made to the famous "committee of five" regarding the methods which ought to be adopted when the Exchange should actually be reopened. One recommendation, from high banking quarters, was that a commission be sent abroad, to visit every country of Europe and take an inventory of all American stocks and bonds that were likely to be sold; the Exchange remaining closed until the commission had returned. Another suggestion, seriously made, was that the Government declare it a misdemeanor for a broker to take orders from any one but an American citizen. This was to shut out European sellers. Still another proposal was that the national Treasury issue currency against stocks and bonds; another, that the Stock Exchange make a rule for securities from abroad to be paid for on a basis of 10 per cent. cash and the balance in certificates of deposit, non-negotiable except between banks.

These ideas now sound as quaint as the "currency proposals" of the army of visionaries who travelled to Washington after the panic of 1907. As to why, despite the misgivings of the day, the Stock Exchange actually did resume open trading in stocks on Saturday, December 12, the strongest reason was that the Stock Exchange could not help itself. The New Street "curb market" had grown to large proportions; despite the discountenancing of it by the banks and the Stock Exchange, it was really fixing prices, and on a basis very largely of legitimate sales and purchases by the public. When this had gradually given way to the semi-official market in the Stock Exchange clearing-house, the volume of business done in that market had by December risen to proportions with which the extemporized machinery was unable to cope. There was really nothing for the Stock Exchange but to take the plunge and see what would happen.

But the Exchange had undoubtedly made up its subconscious mind that nothing serious would happen. Even the restriction of the "minimum price" chafed; in April, that precaution also was abolished. The three or four weeks preceding the reopening of the Stock Exchange had given at least a foretaste of the notable change that was about to occur in the country's economic situation. Part of that change had in fact occurred already; the return of money rates to a normal level, the fall of sterling exchange almost to parity, the cessation of gold exports, and, not least of all, the establishment of the new Federal Reserve system, with its safeguards and its smaller requirements for individual bank reserve.

Even the balance of international trade in merchandise was swinging so rapidly to the export side that the country's surplus of exports, which in November was $18,000,000 less than the year before, had in December run $82,000,000 beyond 1913. The orders of belligerent Europe on our manufacturers of munitions, which have subsequently reached such extraordinary magnitude, had at that time scarcely begun. No one could then foresee the influence which those orders were destined to exert whether on the export trade, on the steel industry, or on the stock market itself. But on the other hand, our exports of grain had already, at this time a year ago, surpassed all precedent in the history of the American grain trade.

It is reasonably safe to say, therefore, that when the Stock Exchange reopened it had already obtained a glimpse of the cheerful economic developments then ahead of us. To what extent Wall Street actually foresaw the conditions which have followed, in the matter of European holdings of American securities, is another question. That heavy sales from that quarter were inevitable, every one believed; that belief was the reason for the long maintenance of "minimum prices." And the belief turned out to be correct.

What nobody could have expected even the most daring financial authority to predict, and what nobody did in fact prophesy, was that $700,000,000 of those securities would actually be "unloaded" on our market in the ensuing twelvemonth, without preventing a general rise in American prices for the same securities. "If any one had predicted, just a year ago," a member of a well-known American banking house lately remarked, "that within twelve months Wall Street would be complaining that London was not selling back its American securities fast enough, and that England's shipments of gold to us were so large as to be injurious to our own interests, would he or would he not have been considered in his right mind?" Yet both things have come to pass.

PELLE THE CONQUEROR: Struggle

By **MARTIN ANDERSEN NEXO.** Translated by BERNARD MIALL. 12mo. $1.40 net. (*Just Ready*)

The third volume, each a complete novel in itself, in the series of four that are to picture the life and career of a great modern Labor leader, as "Jean-Christophe" pictures the musical genius.

The first gave the boyhood of Pelle on a farm. The second novel gives his youth and early manhood in a provincial Danish town "not yet invaded by modern industrialism and still innocent of Socialism." In this volume Pelle is in Copenhagen; there he finds love and becomes a labor leader.

"Possesses the literary qualities that burst the bonds of national boundaries."—*Springfield Republican.*

The Children of Poland Need Your Help

They Are Being Swept Away By Famine and Disease

¶ It is the war's most appalling feature today—the extermination of a nation's young—its very life and hope.

¶ We are trying to save some. We can save many if generous Americans contribute generously at once.

¶ Through these printed words you hear the cries of the Polish children—though they are far away. You see their little hands outstretched.

¶ Surely you will give them bread. For their mothers have nothing to give them but their tears.

¶ Your aid—the little or much that you can spare—will allay suffering and save lives.

¶ And in some mother-heart there will be a prayer of gratitude for you, the unknown helper in the name of world-wide brotherhood and sisterhood.

"Ah, if beside the dead
Slumbered the pain!
Ah, if the hearts that bled
Slept with the slain!
If the grief died;—But no;—
War will not have it so."

THE DISEASE OF CHARITY

Bolton Hall, well-known writer on social questions, has written a booklet that challenges the efficacy of charity work. He admits that with poverty, sickness and misery all about, we cannot let men suffer and die without doing something. But he is not sure that we are doing the right thing. "The Disease of Charity" is inspiring, thoughtful and constructive.

A complimentary copy of this booklet will be mailed to every reader of the Nation who sends a trial subscription (only 25c.) to The Public, a journal of fundamental democracy.

Referring to The Public, BRAND WHITLOCK wrote from Belgium:

> . . . In the midst of all the horrors of the world it is the one thing I know of—aside from one's own conscience—and the democratic principle down deep in our heart—by which to correct one's reckoning. It is a compass—never sensational, always calm and pointing in the same direction.

Use the attached coupon for a trial subscription.

.....

The Public

AND OTHER POEMS

By LEE WILSON DODD.

Couched in musical language, with a depth of earnestness, a keen but kindly observation of life and at times a delicate humor, these poems possess a charm and inherent worth which reward the reader in a degree not equalled by much of our contemporary poetry.

Paper binding, 50 cents. Board binding, 75 cents.

YALE UNIVERSITY PRESS

The Nation
At Leading Book Stores

THE NATION is on sale at leading book stores and newsstands throughout the United States and Canada. Our readers will confer a favor by reporting to us any newsstand or book store at which they are unable to obtain copies of THE NATION. If you desire to secure a copy regularly through the newsdealer, during temporary sojourn at any place, it is a good plan to give him a regular order. List of dealers in a number of cities where THE NATION may be obtained is as follows:

Ann Arbor, Mich., H. Stofflet.
Atlanta, Ga., Miller's Book Store.
Baltimore, Md., Newsstand, Hotel Belvedere.
Beloit, Wis., E. A. Nelson.
Boulder, Col., Greenman Stores, 1219 Pearl St.
Buffalo, N. Y., Iroquois Hotel Newsstand.
Chicago, Ill., A. C. McClurg & Co.
Chicago, Ill., A. Kroch.
Cleveland, O., Pushaw Stand in Superior Arcade.
Decatur, Ill., W. T. McFaddeu.
Galesburg, Ill., G. A. Swenson.
Hartford, Conn., H. P. Koppleman.
Ithaca, N. Y., D. Mayers.
Madison, Wis., The College Book Store.
Milwaukee, Wis., T. S. Gray Co., 104 Wisconsin St.
Minneapolis, Century Newsstand, 10 S. 3rd.
Montreal, Chapman's Book Store.
New Orleans, La., C. E. Staub.
New Orleans, La., G. E. Hill.
Newport, R. I., W. P. Clarke Co.
Philadelphia, Pa., C. B. Swift, Bullitt Bldg.; L. G. Ran, 7th and Chestnut Streets; Greene Hotel, 8th and Chestnut Streets.
Pittsburgh, Pa., Boggs & Buhl Book Dept.
Pittsburgh, Pa., Horne's Book Dept.
Pittsburgh, Pa., Jones Book Shop, 416 Wood St.
Richmond, Va., Richmond News Co.
San Francisco, Cal., Golden Gate News Co.
Springfield, Mass., Hotel Kimball Newsstand.
St. Louis, Mo., Philip Roeder Book Store, 703 Locust St.
Toronto, Canada, Prince George Hotel Newsstand.
Toronto, Canada, McKenna's Book Store, 235 Yonge Street.
Washington, D. C., Newsstands at Raleigh, Willard, and Shoreham Hotels; Adams News Depot, 622 9th Street.
Winnipeg, Canada, F. R. Morris, 235 Portage Ave.

BINDER FOR THE NATION

To receive the current number in a convenient (temporary) form. Substantially made, bound in cloth, with THE NATION stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents. Address The Nation, 20 Vesey Street, New York City.

Mind and Health Series

Edited by H. Addington Bruce

A series of medical handbooks written by eminent specialists and designed to present the results of recent research in a form suitable for the lay public's reading.

Human Motives
By JAMES J. PUTNAM, M.D.

The Meaning of Dreams
By ISADOR H. CORIAT, M.D.

Publishers Boston, Mass.

A new "before-the-war" book that is attracting wide attention.

THE INEVITABLE WAR

By FRANCIS DELAISI

Published in Paris in 1911, under the title of *La Guerre qui vient*, this volume by an eminent French Socialist gives a new view of the ante-bellum relations of Germany, France and England. Its discussion of the resignation of M. Delcassé in 1905 is especially timely.

French Original and English Translation on Opposite Pages.

Good Business:

The year 1915 has been a record breaker for **The Nation;** *the volume of advertising appearing in its columns is the largest of any of its fifty years; it exceeded the record of 1914 by many thousands of lines.*

The new contracts now in our hands from national advertisers never before using **The Nation,** *and improved business conditions generally, indicate that the year 1916 will be even more successful than 1915.*

Advertising Department, 20 Vesey St., New York

The Nation

NEW YORK, THURSDAY, DECEMBER 23, 1915.

Summary of the News

The exchange of notes between Washington and Vienna has been rapid. The Austrian reply, dated December 15, to the demands made by the United States in regard to the Ancona, was published in Sunday's papers. The general tone of the reply was considered wholly unsatisfactory, and intended only to prolong the controversy, in the same manner in which the dispute with Germany over the Lusitania has been dragged out through seven months. The reply of the United States to the Austrian note was dispatched on Sunday, and the full text of it was made public yesterday.

In a brief document of barely six hundred words, Secretary Lansing reiterates, without qualification, the "definite but respectful demands made by the United States in its communication of December 6." The request of the Austrian Government for further enlightenment concerning the sources of information on which the demands of the United States are based is courteously but quite definitely brushed aside by the reminder that the report of the Austro-Hungarian Admiralty, transmitted to the State Department by Baron Zwiedinek on November 15, contained an admission that "the vessel was torpedoed after her engines had been stopped and when passengers were still on board." This, it is held, is "sufficient to fix upon the commander of the submarine which fired the torpedo the responsibility for having wilfully violated the recognized law of nations, and entirely disregarded those humane principles which every belligerent should observe in the conduct of war at sea." These humane principles and the rules of international law the Government of the United States "does not feel called upon to debate." No time limit is set for the reply of the Austrian Government, nor is any statement made of the consequences that may follow a refusal to satisfy the demands of the United States. In Washington, however, the general opinion prevails that a long delay will not be tolerated, and that undue procrastination or a refusal to accept the views set forth in the note must result in a severance of diplomatic relations between the two countries.

Shadows of coming events have fallen freely over the political arena during the past few days. The Republican Committee last week, anticipating by one week the Democratic Convention to be held at St. Louis, fixed on Chicago as the meeting place, and June 7 as the date, for the Republican Convention. There remained to be heard from Col. Roosevelt and the Progressives. On Saturday news came out of the Colonel's presence on the preceding evening at a dinner given by ex-Judge Elbert H. Gary, at which a number of financial magnates were present. Speculation connects the dinner with a renewed attempt to adjust Progressive and Republican differences. An apparently authorized statement on Monday declared that any of three possible Presidential candidates—Justice Hughes, ex-Gov. Hadley, or ex-Secretary of State Knox—would have Col. Roosevelt's endorsement; only the "Old Guard" must be kept from control of the Convention. The Colonel himself, it was stated, would only become a candidate "by the action of a convention so spontaneous that no man could refuse."

Secretary Lansing announced on Monday that a protest had been sent to England concerning that country's interference with shipments by parcel post between the United States and Sweden.

In the brief session of Congress previous to adjournment over the holidays plenty of indications have developed that there exist wide differences of opinion over the question of preparedness, and that the Administration's programme is destined to have by no means easy sailing. The War Revenue bill was extended for one year, only after a hot debate in the House on December 16, by a vote of 205 to 289. The bill was passed by the Senate, and signed on the following day.

Sensible progress has been made towards a restoration of normal conditions in Mexico by the settlement of terms of peace between the Provisional Government of Carranza and representatives of Villa's faction. The terms, details of which were published in Washington on Monday, include: a general amnesty to the partisans of Villa; safe conduct for Villa himself to the United States, where he will enjoy the status of a political refugee; the cession to the Government of Carranza of territory at present controlled by Villa; the incorporation of Villa's troops in the Constitutionalist army, and their employment against the Zapatistas. The intentions of Villa himself remain obscure as we write. Reports on Tuesday spoke of his having disappeared with a handful of followers.

Revelations of Teutonic plots continue merrily. The most important event of the past week in this connection was the arrest on Friday of Paul Koenig, who is connected with the Hamburg-American Line, on a charge of having set on foot a plot to wreck the Welland Canal, the artery for Canada's transatlantic trade from the Great Lakes. Persons alleged to be Koenig's associates in the enterprise have also been arrested. Other incidents were the arrest last week of a man called Swoboda, on suspicion of being concerned in recent explosions in the works of the du Pont de Nemours Powder Company, and the presumed scuttling of a barge in the Hudson by which more than five hundred horses intended for the Allies were drowned. Dispatches by wireless to Sayville of December 18 contained an authorized disavowal by the German Government of any connection with conspiracies organized by Germans or German-Americans in the United States.

Two important items of military news, neither of them altogether unexpected, have been received. Dispatches from London of December 15 announced the retirement of Sir John French from the command of the British forces in the west, and the appointment as his successor of Gen. Sir Douglas Haig. Sir John French is created a viscount, and becomes commander-in-chief of the armies in the United Kingdom. On Monday came the official announcement that British forces had evacuated the regions of Suvla Bay and Anzac, in Gallipoli, and been transferred to "another sphere of operation." The positions at Sedd-el-Bahr, on the tip of the peninsula, are to be retained. The transference of the troops, it is stated, was accomplished successfully and with insignificant casualties. The destination of the troops is not announced, but it is thought probable that they have been transferred either to Egypt or to Salonica. There have been rumors, which are probably not to be taken very seriously, during the past week of a contemplated Teutonic and Turkish attack on a grand scale on the Suez Canal. Another change in the British high command is the appointment of Gen. Sir Horace Smith-Dorrien to the command of the British forces in German East Africa.

There has been little change in the situation in Macedonia. The Allied forces, having made good their retreat to Salonica, are busy strengthening their positions. So far neither Bulgarian nor German troops have carried the pursuit across the Greek frontier. News dispatches state that an agreement has been come to with the Greek Government that in no case shall the Bulgarians cross the frontier. It does not appear to be established definitely what will be the attitude of the Greek Government if a campaign in Macedonia shall be undertaken by the Teutonic forces alone; but if the news, received on Tuesday, be true, that Greek forces have occupied Doiran, it would seem that the intention is to resist a German invasion. In any case, however, it is improbable that the Teutonic forces are in sufficient strength to undertake such an enterprise unaided. An Italian relief force has been landed in Albania for the assistance of the Servians and Montenegrins. The result of the Greek elections, held on Sunday, which means nothing since the adherents of M. Venizelos abstained from voting, is the return by a large majority of the government of M. Gounaris.

In the House of Commons on Monday Mr. Lloyd George made an important speech on the question of munitions, outlining with considerable frankness the rather sorry story of the past, and appealing for the assistance of the labor unions for the future.

Debates in the Reichstag have been concerned largely with questions relating to the food supply and prices. A new credit for $2,500,000,000 was introduced last week. Speaking on Monday, Dr. Karl Helfferich, Secretary of the Imperial Treasury, forecast a considerable increase in taxation. Reviewing Dr. Helfferich's speech in support of the proposed credit, the Socialist *Vorwärts* demands that the German Government and the Reichstag indicate in what way the money necessary for the payment of interest on the nation's war debts and for their redemption is to be provided.

M. Camille de Coppet was, on December 16, elected President of the Swiss republic.

The Week

The report of the Commissioner of Navigation on the activity of American shipyards cannot be characterized as a piece of all-round teamwork with the backers of the new Government shipping measure. It gives the unfortunate impression that the yards are crammed to capacity with business. As the essential feature of the new bill is that it would make the Government a sort of ship-broker, buying or building a specified total of shipping and leasing the vessels in large part to private parties, the report casts doubt on the wisdom of the Government's entrance at just this juncture. All available yards, all that can be refurbished, are choked with contracts. How can the Government procure the building of ships without forcing out of these shipyards vessels that would go direct to private operators? If the Government proposes to fit up merchant yards of its own, that is an expensive enterprise, and requires time; and the shipping bill is admittedly an emergency measure. Above all, it must be remembered that if the Government is to give any striking amount of help to American shipping, it must build or have built on a large scale. The Commissioner reports 98 merchant vessels of over 3,000 tons, 70 of more than 5,000, now under construction or contracted for. Not by obtaining and leasing a mere handful of ships could the Government pretend that it had rescued our commerce.

There was no closure in the Senate last Friday, but Senator Penrose was closed up by Mr. Underwood. The Alabama Senator, on the question of revenue from the tariff law and the general relation of prosperity to high protection, carried altogether too many guns for the Pennsylvanian. The latter, in the running debate between the two, was driven into several different corners and walked into a number of traps. All that he could do at the end was to declare that, anyhow, if the country must be admitted to be flourishing under a Democratic Administration, the prosperity is "meretricious." This is pretty nearly to plagiarize from Horace Greeley, who wrote of the low tariff of 1833 that the country was launched by it "on the flood of a factitious but seductive semblance of prosperity." On the main question before the Senate—the extension of the war-taxes for another year—there was really but one thing to do. "Excoriate" the Administration as the Republicans might, and make party speeches as they pleased, the money to carry on the Government must be voted. The Republican opposition was purely formal and partisan. If any wonder that the whole subject should have been disposed of in one day, they should observe that it was the day before the holiday adjournment. If Christmas came once a week, there would never be any need of closure in the Senate.

The recommendations which Governor-General Harrison has made for changes in the Jones-Hitchcock bill, as reported to the Senate Philippines Committee, breathe a spirit of caution. He would have the preamble amended to declare the intention of the United States to grant the islands their independence when, in the American judgment, it would be "to the permanent interest of the people of the islands"; not, as now, when the Filipinos "shall have shown themselves to be fitted therefor." It is explained that no Filipino will admit himself unfitted for independence, though many admit that it will not be to their best interests for a long time to come. He would lower the voting age by one or two years, to include a greater number of American-educated young men. For stability he would hold elections triennially instead of biennially; he would increase the present Senate of nine merely to twelve, instead of twenty-four members, as likely to bring out better men; and he would elect the resident commissioners by the Legislature instead of by popular vote. One change to which the Republicans may object is that vesting in the Governor-General the assignment of duties to the Vice-Governor. The bill now specifies that the latter shall be in charge of education, health, and the non-Christian tribes. This would enable the Governor, upon his own discretion, to place these departments in charge of Filipinos whom he thought fitted to administer them. But this involves precisely the main question of policy at issue in the bill; and the Administration is committed to an increase of the participation of Filipinos in the Government.

Why should people puzzle over Mr. Roosevelt's presence at the Gary dinner? The Colonel did not go as a politician, he did not go as a social-justice expert, he did not go as a magazine writer. He went as a faunal naturalist, as a scientist led by that vast curiosity for new lands and new people which has taken him to Africa, to South America, to slums and factories and picture exhibitions. Here was a Gary dinner recalling those famous Gary dinners at which, between the soup and the entrée, extraordinary things used to happen to the iron and steel trade. We wonder if any one has kept a record of the table-talk at the Gary dinners. There must have been a flow of soul and high conversation. People spoke there of the novels of the season, of Futurist art, of Bernard Shaw and Richard Strauss, of the Boy Scouts, and amidst the flash of wit and good-natured raillery, pig iron went up so much, steel billets so much, and tubes so much. It was inevitable that the man who has penetrated so many dark regions of the earth, traversed so many jungles, mapped so many rivers of doubt, should have been impelled to find out the mystery of the famous Gary dinners. Mr. Roosevelt went as a naturalist—studying the habitat and habits of *Octopus Gariensis*.

It would never do for a party which furnished such a sensation as did the Republicans in 1912 to settle down to tame and commonplace procedure in 1916. So the Republican Committee springs a surprise by setting the date for the Republican Convention ahead of that selected by the Democrats. At one stroke it astonishes the nation and stimulates itself. Could its lost leader do more? When the Chicago Convention has finished with the issues and named its candidates for 1916, let the St. Louis Convention do what it can with what it finds left. The Chicago Convention will be based upon the new apportionment plan, with the Southern delegations materially reduced in numbers and importance. This one thing the Chicago of 1912 wrote large for the Conventions that were to come after, and the results will be interesting to observe. Lovers of historic parallels—and reversals—may be impressed with the contrast which the Convention arrangement for next year affords with that for just twenty years ago. McKinley was nominated at St. Louis, as everybody knew he would be, a few days before the Democratic Convention met at Chicago, at sea as to candidates.

It appears that in France, as well as in England, there is a lack of that swift and penetrating hindsight which enables so many of our bright American journalists to pronounce an unqualified judgment of incompetence and failure on a man like Sir John French. The *Manchester Guardian* has never been accounted either stupid or ignorant, yet it has the tactlessness to draw attention to the difficulties with which it imagines

that the British general had to deal, and even the boldness to make this assertion:

> The movement from the Aisne to Flanders, which was Sir John French's idea and his alone, was an inspiration. It saved the French system of defence, which must otherwise have gone to pieces entirely. This movement is one of the few instances in the war of our having divined in advance and forestalled the enemy's strategy.

As for the Paris press, instead of rejoicing at the removal of an incubus, the cable informs us that it "is unanimous in expressions of regret at the departure of Field-Marshal French, and lays particular emphasis on his services during the trying times of the opening period of the war." And as though this were not enough, the French actually carry their perversity to the point of expressing satisfaction over the appointment of Gen. Sir Douglas Haig, not because he is the diametrical opposite of his predecessor, but because he is one of Field-Marshal French's most apt pupils!

The German Finance Minister, Dr. Karl Helfferich, in his speech before the Reichstag on Monday, recognizes a limitation on the possibilities of the war indemnities to be wrung from Germany's enemies which did not appear in his speech of last August. He still speaks of that indemnity, "upon which we naturally reckon," but he now finds it necessary to acknowledge that, whatever may be the amount of it, it will not suffice to prevent the war from having brought upon the German people "its train of colossal tax burdens." Just what consequence this consideration will have in the shape of new taxes to be immediately imposed, does not as yet appear; indeed, it is not plain whether Dr. Helfferich has in mind any very heavy augmentation of immediate tax burdens. The emphasis of his speech is all upon post-bellum taxes. That these will be "colossal" he now frankly admits; but he makes it clear that the policy will be continued of placing as much as possible of the expenditure, while the war lasts, upon loans, leaving for new taxation only what cannot be avoided without grave financial danger. How long this policy can stand the strain is a question which is bound to become of critical urgency unless the war should come to an unexpectedly speedy close.

The "facts" as to England's peril in Egypt, reported from Rome, call for some consideration. And first as to the double-track railway "from Damascus" to the Egyptian frontier, which has been pushed with extraordinary speed, and which needs only fifty miles more of track before the peninsula of Sinai is reached. As a matter of fact, there has been for ten years a railway from Damascus in the general direction of the Egyptian frontier. This is the famous Damascus-Mecca Railway, which, at Maan, is about fifty-five miles from the Egyptian frontier. Apparently, then, the extraordinary speed with which the railway has been pushed has resulted so far in five miles of new track, with fifty more to be completed. It may be, of course, that part of the work consisted in double-tracking the original single line from Damascus to Maan. At any rate, there remain fifty miles of double-track to build before Sinai is reached. How long will that take? The Damascus-Mecca line was built as a pious undertaking. Patriotic Mussulmans gave their money, and Turkish troops were employed in its construction. In seven and a half years 820 miles were built, or an average of less than ten miles a month. The best record was on the stretch to Medina, 350 miles in twenty-four months, or fifteen miles of single track a month. The fifty miles of double-track to Sinai would thus take about six months, even if we suppose that Turkey, in time of war, with her armies very busy, could equal the record of peace time.

When the double-track railway reaches the Egyptian frontier, what then? The implication of the Rome dispatches is that once an army has reached the Egyptian frontier it is at the Suez Canal. As a matter of fact, the Suez Canal lies 150 miles west of the frontier and between is the whole of the peninsula of Sinai. If the Teuto-Turkish army of invasion leaves the rails at the frontier, it is no better off than the Turkish army which made the first attempt against the Suez Canal, with this important difference: that it would be a question of feeding and supplying an army of 300,000 men across 150 miles of desert, instead of the comparative handful which the Turks employed. If, on the other hand, it is the intention to push the railway straight across the Sinai peninsula to within striking distance of the Canal, the Kaiser and the Sultan have undertaken a building operation of a couple of years, and not a task that will be finished by next February, as the dispatches from Rome assert. In addition there are all the miles of water-pipes to lay across the desert! By that time England should be in a position to meet the attack with adequate forces. We are very much inclined to think that England to-day has enough men for the task in Egypt, which is her principal base for the operations in the Balkans.

The proprieties in the Balkans are being carefully observed. Italy, for example, has been pouring out her blood against Austria, but with Austria's great ally Italy is not at war. She may soon be, in Albania, but it is not certain. Greece has her own punctilio: the Germans and Austrians may cross the Greek border in pursuit of the Allies, but the Bulgars must not. It is a choosing of partners in a tragic quadrille. Austrians are matched off against the Montenegrins because the Germans, by attacking Montenegro, might irritate Italy, whose Queen is a Black Mountain princess. For the same reason Germans will not enter Albania, but will let the Bulgarians do it, while they do the Bulgars' work in Greece, etc., etc. Is this another sign of diplomatic Bourbonism which insists, even in the midst of a world catastrophe, on its little convenances? Or is it cool-headed recognition of the fact that life will go on after the war and that every trifle which may help the reëstablishment of civilized relations is worth preserving?

A literary *entente* seems to be forming rapidly among the Allies. A few months ago sixty-seven Russian writers addressed an appeal for closer relations to the British world of letters. Emile Boutroux has headed a committee designed to draw English and French authors together, and in November appeared a literary "manifesto" signed by Belgians and French. In such a time the literary men recall the fact that so long ago as 1754 humanistic cosmopolitanism bore fruit in a French periodical called the *Journal Etranger*, and that it aimed to include all Europe, not merely the nations of a military alliance. Its first editor was Grimm, whose cosmopolitan tastes were among his chief distinctions, and its second the Abbé Prévost, a renowned traveller, who knew English literature as no other Frenchman of his time. Among its supporters were the royal families of France, Poland, and Prussia, and libraries of all Europe, and among its contributors were Jean-Jacques Rousseau and Malesherbes. The *Journal Etranger* endured three years, one of its strangest adventures into foreign fields, the publication of three Iroquois chants, proving its swan song. It did not, as its prospectus hoped, see born a literary age to be called the age, not of Elizabeth or Louis XIV, but *le siècle glorieux de l'Europe entière*. But it may serve to remind modern cosmopolitanism that it can

succeed only by a spirit that will overcome such barriers as now exist between the Teutonic and the other Powers.

The death of Francis M. Cockrell recalls to mind not so much his own thirty years' service as United States Senator from Missouri, though that was of respectable quality, as the career of the man whom he succeeded. When Missouri went back to the Democratic fold, it was plain that Carl Schurz could have no political future in that State, and his retirement from the Senate in 1875, after a single term of distinguished service, was felt by intelligent citizens to be a serious loss to the nation. He was, indeed, enabled to continue to render services of the highest value to the country, as Secretary of the Interior under Hayes and afterwards as journalist and as a personal leader of opinion. But the natural sequel to such a career as his had been—beginning almost with his arrival in the land of his adoption and continuing throughout twenty of the most crucial years of our country's history—would have been continuous service in public posts of the highest importance. It is one of the serious drawbacks of our State system—arising by no means solely from Constitutional restrictions, but even more from the traditions of local pride or exclusiveness—that the future of a man who is essentially a national figure depends on circumstances peculiar to his own State. A change of residence is indeed possible, but the new arrival labors under a tremendous handicap. What might it not have meant for the country if New York had risen to its opportunity and sent Schurz to the Senate!

Secretary Redfield's annual report contains a reminder to Congress that the new orders he issued following the Eastland disaster by no means serve as a full protection against future occurrences of the sort. The two most important forbade the issuance of an increased passenger-carrying license except after a personal inspection, and called for "inclining tests" of any vessel whose stability the inspectors questioned. But there is still no law giving the Government adequate control over the structural strength of vessels, so that the plans are left to the builder's judgment, and only the likelihood of incurring the disapproval of Lloyd's and other classification services operates as a restraint upon the launching of unseaworthy craft. The Secretary asks for power to centralize the inspection of hulls and boilers in the Supervising Inspector-General, for a law requiring fireproof construction of all excursion steamers built after 1917, and, above all, for a much larger force in the Steamboat Inspection Service, which is at present "seriously overworked." The Chicago grand jury complained that the inspectors were untrained men, and prayed that the service be turned over to the Navy Department. If it is the duty of Congress to see that the appropriation for the inspection service and the powers granted it are enlarged, it is the duty of the Secretary to see that his field force is well chosen.

The election of Major R. R. Moton, of Hampton Institute, as head of Tuskegee to succeed Dr. Booker T. Washington, will everywhere cause the friends of negro education to rejoice. Major Moton has well earned this position by his admirable work for Hampton, which will keenly feel the loss of his services. An excellent orator of exactly Dr. Washington's type, with a thorough understanding of conditions in the South and the Southern white people, Major Moton could not be better equipped for the great task which he assumes. Like Dr. Washington, he has made his way up from small beginnings, but, unlike his predecessor, he has given his whole life to service at Hampton, where his tact, his self-subordination, and his never-failing patience and good humor early attracted attention. Finally it is interesting to note that Major Moton is a full-blooded negro, who in his new position will, like Richard R. Wright, of the Savannah Industrial School, and many others, give the lie to the old fable that only mulattoes advance to responsible intellectual positions. As it is, there is now every assurance that Tuskegee will go on with as slight a break in leadership as possible, and will be carried on as an educational institution in precisely the spirit of Booker Washington. If Hampton can now find the right successor to Major Moton, it will be further gratifying proof of the ability of the colored people to develop high and worthy leadership.

That one "purpose play" has lived three-quarters of a century is a fact recalled by the death of an actor said to be the original "Uncle Tom"; for no doubt there are still stray companies presenting one version or another of Mrs. Stowe's story. Its production on the stage was simultaneous with its publication as a book, for it first appeared in a periodical. While in 1852 it was running up a sale of 300,000 copies, there were beginning those performances which have reached a total beyond those of any other play in America. It was perhaps with the stage version in mind that Fanny Kemble wrote the London *Times* that she could bear witness to the truth and moderation of the book as a representation of the slave system. Yet the history of the play must be looked back upon with mixed feelings. Its great vogue during the years preceding and immediately following the Civil War was accounted for by its graphic bearing upon the most vital question of the time. Its long vigor since then is much less attributable to its historical interest than to its melodramatic thrills; and it is not pleasant to consider that the most popular American drama has been one dramatically cheaper than "East Lynne." Not merely rural, but metropolitan, audiences have helped make Topsy the prototype of all negro comic characters, Legree the symbol of an arch-villain, and Little Eva the object of a wider bathetic regard than Paul Dombey. It was in the large cities that the apotheosis of Uncle Tom reached its most magnificent absurdity.

The Villistas' acknowledgment that the game is up is formal recognition of a fact that has been patent for some months. It marks the end of an epoch and the beginning of another which will be signalized with due pomp when Carranza enters Mexico City and sets to work at the reconstruction of Mexico with the good will of the nations. For the moment our interest attaches to the flitting from the contemporary stage of one of its most picturesque characters. "Pancho" Villa, the outlaw, who came within striking distance of the Presidency of Mexico, the bandit who developed into a military genius, represented in his own person the raw capacities of the Mexican people for good and evil. He was the peon to whom the policies of Diaz denied the opportunity for developing into a contented and prosperous citizen of his country. It has been a romantic career. Yuan Shi-Kai, who has won an emperor's crown, set out from the high position of Governor of one of China's greatest provinces, and has traversed the interval in fifteen years. If we measure the distance from Villa's starting point to where he stood at the height of his power, the record is no less impressive. Nor does the picturesque record suffer from the fact that the outlaw Villa rose to fame on the crest of a great cause, that he will go down in history as one of the avengers of Francisco Madero and a vindicator of the cause of Mexican democracy.

IF THE COLONEL HAD BEEN THE KAISER.

Mr. Roosevelt, in his latest article in the *Metropolitan Magazine*, finds the whole world more out of joint than he usually does. But what could he expect, since the one man born to set it right is out of office? President Wilson is, of course, thoroughly incompetent. If proof of this were lacking, it could be found in the fact that he is heartily supported by Mr. Taft. And Mr. Roosevelt can find no hope even in the fact that the President is borrowing ideas from the Colonel—though always about a year too late. "Over a year ago I pointed out that it was the duty of the United States to champion the integrity of the neutral rights of Belgium, against the lawless conduct of belligerent Germany."

This statement, which in substance Mr. Roosevelt has made repeatedly, raises an interesting question. Many have asked what Mr. Roosevelt would have done if he had been President in August, 1914. The answer just made by his old friend and psychological analyzer, Professor Münsterberg, is that "in the White House he would have been the leader of the anti-Allies." This is an inference from the fundamental German sympathies which the professor discovers in the Colonel. And here comes the really interesting question. It is not, what would Roosevelt have done had he been President, but what would he have done if he had been the Kaiser? In other words, in his violent and iterated condemnation of the German Government for violating the treaty with Belgium, is he not condemning himself? Have we not evidence, in what he did and in the views which he has expressed, that if he had been in the Kaiser's place he would have invaded Belgium without scruple, and, instead of apologizing for it half-heartedly, as the German Chancellor did, would have glorified it as an act of the highest international righteousness?

The essence of the charge against Germany is that she broke her treaty guaranteeing the neutrality of Belgium and the inviolability of her territory. Well, the United States had a treaty binding this country just as strongly, yet President Roosevelt broke it without a moment's hesitation. The treaty of 1846 between Colombia and this country solemnly recited that "as an especial compensation for the said advantages, and for the favors they have acquired by the fourth, fifth, and sixth articles of this treaty, the United States guarantee, positively and efficaciously, the perfect neutrality of the before-mentioned isthmus [Panama] . . . and the United States also guarantee, in the same manner, the rights of sovereignty and property which New Granada [Colombia] has and possesses over the said territory." But we all know what happened. When Roosevelt "took" the isthmus, far from paying any regard to our promise to guarantee Colombian sovereignty over it, he gave orders to prevent Colombia from even attempting to assert her own sovereignty. And as if to leave no doubt in any one's mind concerning his notions of international morality, Mr. Roosevelt flatly declared later that if he had not been able to seize the isthmus by means of a fraudulent revolution, he would have resorted to direct force. In a letter to W. R. Thayer, printed in the latter's Life of John Hay, Vol. II, p. 328, he wrote: "If they [the Panamanians] had not revolted, *I should have recommended to Congress to take possession of the isthmus by force of arms.*" The Kaiser would be hard put to it to beat that.

In the same Life of Hay there is another letter by Mr. Roosevelt which indicates how much weight he would have given, had he been Kaiser, to the Prussian treaty of 1839 guaranteeing Belgian neutrality. This letter was written to John Hay himself, at the time of the negotiation of the Hay-Pauncefote Canal treaty, in 1900. It contains a phrase which might well be thought a Roosevelt variant of Bethmann-Hollweg's "scrap of paper." Here it is:

> *As for existing treaties—I do not admit the "dead hand" of the treaty-making power in the past.*

Of course, being Mr. Roosevelt, he hedged and went on to speak of the need of having treaties "honorably abrogated," but who can doubt that the sentence we have quoted speaks the instinctive attitude of the Colonel towards a treaty that gets in his way? By so much, the Harvard psychologist is right in finding a right Prussian quality in the American whom he has so intimately studied.

Going back, then, to the question what the Colonel would have done if he had been the Kaiser, we are forced to conclude that he would have struck at France through Belgium with even less reluctance than Wilhelm II displayed. And such talk as he now indulges in about Belgium he would have scorned as merely so much chatter. We do take patriotic pride, however, in the belief that the Colonel would have far outdone the Kaiser in one respect. The latter represented the attack on Belgium as a disagreeable military necessity, and his heart bled over Louvain. But if Mr. Roosevelt had had the job to do, he would have set about it in the blithest spirit, would have put joyous zest into the violation of a treaty, and would have lectured all and sundry with a kind of holy unction on the exalted regard for righteousness which he had exhibited.

GALLIPOLI AND AFTER.

What is the "other sphere of operations" to which the British forces from northern and central Gallipoli have been transferred? This is the outstanding question of the moment. If we knew the correct answer we should know, at least in outline, the Allied plans for winter and spring. And this not only for the Balkans and the Mediterranean but for every theatre of war. It is hard not to associate the withdrawal from Gallipoli with the prolonged conferences among the military authorities of the Allies recently concluded in Paris. The decision must have been framed there. The situation had been thoroughly canvassed. France must have told what troops she could continue to spare for the Balkans. Italy must have made it pretty clear to what extent the Allies could count upon her. Coming after the conquest of Servia and the vanishing of the hope of an immediate Allied campaign from Salonica, the Paris conferences must once for all have decided upon a course demanded by the ultimate necessity of victory, to the disregard of the loss of prestige involved in this or that confession of defeat. At Paris it was recognized that the Gallipoli campaign was a failure. It was a question where the deadlocked troops could be used with better effect. Was it decided to bring the French forces home, or to send them to Salonica? And the British troops, have they been taken to Salonica or have they been shipped back to Egypt?

Once the Allies have determined to face the realities of the situation in the Mediterranean, it is not altogether improbable that a retirement from Salonica may follow the retirement from Gallipoli. The immediate purpose of the Allied dash for Salonica, the rescue of Servia, has failed. The secondary purpose, the development of a possible flank attack on the Turks, has also failed, at least for months to come. Confronting the Allies in the Balkans there are now at least 150,000 Austro-Germans, a quarter of a million Bulgarians, and 150,000 Turks released from Gallipoli. If the Allies are to redress the situation in the Balkans they must bring to

bear an equal number of troops. Where are they to come from? We cannot take seriously the story of an Italian army advancing through the Albanian mountains. Just about as much importance attaches to the army Russia is supposed to have been collecting on the Rumanian frontier. If the Allies are to make another try in the Balkans an army of half a million men must operate from Salonica. Only then could Rumania be stirred from her present apathy for the Allied cause. Even then it would be an uncertain fight, involving a tremendous effort without corresponding gains. The original hope of aligning the Balkan states solidly against Germany has vanished. Bulgaria is definitely committed, Greece is determined to remain neutral, and Austria's position is not what it was when the Russians were hammering away at the Carpathians.

Only by throwing the necessary half-million men into Salonica, by winning over Greece, by making the chances for victory extremely attractive to Rumania, can the situation be redressed. The thing is possible, but not probable. It is not to be supposed that the Germans will stand still while Salonica is converted into an impregnable base. It is not impossible that the fortifications north of Salonica are intended to safeguard the withdrawal of the Allied troops from that port. The Balkans having lost their value as a short cut to victory, the Allies may have decided to do what Germany did after the Marne and Ypres—stand on the defensive where they cannot advance, and try elsewhere. The French, who are now calling out the class of 1917, could easily use their colonial troops at home. The British could use their Balkan forces for Egypt, definitely assuring the safety of that country, and giving them a free mind for operations in the field where the war must after all be decided, in Flanders and Belgium. With Egypt safe, with the enormous strain of holding the Ægean and feeding its marooned armies relaxed, England would be giving its new commander-in-chief in the west a chance such as Field-Marshal French never had. It is true that the Germans and Turks, with the way clear in the Balkans, will develop pressure against Egypt. But the British forces now in the Balkans would have in Egypt an advantage they now lack. And conversely the armies of the Central Powers would be confronted with the serious task of conducting operations in the Arabian desert hundreds of miles away from their base.

The Gallipoli campaign has been one of many surprises. It has taught the world many things. Not the least is the rejuvenation of Turkey upon which so much stress has been laid at Berlin. It would be more proper to speak of the rejuvenation of the Turkish army. The future of the Ottoman Empire is not so rosy when we think of a victorious Bulgaria turning its eyes from Macedonia to Thrace, of the Russians in the Caucasus, of the British in Mesopotamia, in spite of their recent defeats. The Turkish army, on the other hand, fighting on three fronts, has certainly belied the predictions based on its showing in the Balkan wars of three years ago. Yet the transformation has been a simple one as we see it now. Against the Balkan states the Turks went to pieces because they were badly organized and led, and greatly outnumbered. The fighting qualities of the Turkish soldier have always been recognized. After 1913 the Turkish army was rebuilt under German supervision. In the present war it has had the advantage of German ammunition and German leadership.

COMMANDERS WHO HAVE FAILED.

The retirement of Field-Marshal French from the chief command of the British forces on the western front leaves Joffre the only survivor of the generalissimos at the outbreak of the war. Von Moltke is gone, the Grand Duke Nicholas is gone, the Austrian generals Auffenberg and Dank were among the first to go. A war lasting nearly a year and a half is bound to make and unmake leaders. A war so full of technical surprises as the present war is bound to facilitate the process. It is only the military genius who lasts through changes and surprises. Men of inferior talent go down and are succeeded by men who need not be of superior talent, but who profit by the mistakes of their predecessors. Kitchener and French made their great reputations in the Boer War. But if either of the men had first been in command in South Africa instead of Sir Redvers Buller, it is not impossible that theirs would have been the mistakes.

Below the rank of commander-in-chief there has been a drastic weeding out of generals in all the armies. The hand of Joffre has been particularly heavy. He made wholesale changes before the war, on the showing of corps and division commanders in the great manœuvres. During the first weeks of actual fighting he cut right and left. Of the men at the head of the five French armies which took the field, Dubail, Castelnau, Ruffey, Langle de Cary, and Lanrezac, two were removed as soon as the retreat began to the Marne. Ruffey, who failed on the Meuse, gaze way to Sarrail, and Lanrezac, who failed on the Sambre, made way for Franchet d'Esperey. It is true that Castelnau failed in the invasion of Lorraine, but his influence was apparently strong enough to keep him in place until he got the chance to redeem himself magnificently around Nancy. Since the first week of actual fighting new French armies have been created and new men have come up. The Sixth Army, which D'Amade organized out of territorial forces and new levies in Flanders, was brought to Paris and under Gen. Maunoury won the battle of the Ourcq as part of the battle of the Marne. A Seventh Army, under Gen. Foch, held the centre in that battle, and is believed by many to have decided its outcome. New men have come up since then. At the head of some of the French armies are men like D'Urbal, who was a general of division at the outbreak of the war; Maud'huy, who was a general of brigade, and, the most remarkable case of rapid advancement, Pétain, who at the beginning of the war was colonel of infantry and who within a year rose through the ranks of brigadier, division commander, and corps commander to his present post.

There have been similar failures and promotions in all the other armies. Of the Germans the first to go was von Hausen, who led the Saxon army at the battle of the Marne. Von Deimling, who commanded in Alsace, has disappeared from the news. The great von Kluck is now convalescing from what gives every sign of being a diplomatic illness. Of British commanders, Ian Hamilton failed in Gallipoli. The Russians, Rennenkampf and Sievers are gone, for obvious reasons. Radko Dmitrieff, who felt the brunt of the Teutonic attack in Galicia, is out of the news. Neither is there mention of Brusiloff, who helped to win the battles of Rawarusska and Lemberg. But Gens. Ruszky and Ivanoff have survived, and apparently with credit. We know of no definite changes in the Turkish command, but instead of Liman von Sanders, who was prominent during the first phase of the fighting in the Dardanelles, we now hear of von der Goltz. Names in the Austrian bulletins are new—Bothmer, Koevess, Baltin, Pflanzer. Archdukes and Crown Princes, of course, never fail.

When we look for specific reasons in the case of Field-Marshal French, it is hard to speak definitely. The outstanding reason, of course, is his failure to show results commensurate with the present size of the British army. The specific charges are the

failure at Neuve Chapelle in March, and the disappointment of Loos in September. The same accusations have been made in both instances—lack of preparation by the Staff and unaccountable delay in bringing up reserves. Sir John French confesses to some confusion in part of the operations around Loos. But it would be unjust to overlook the peculiar handicap under which the British army has labored. It has not had the advantage of veteran staff officers and intimate acquaintance with the ground. The British army has had to create its officers as well as its men. Furthermore, it is unjust to speak of the British "failure" around Loos as compared with the French success in Champagne. From the German point of view, both attacks failed. Considering the superior resources Joffre had at his command, the relative gains may not have been so disproportionate. Nevertheless, the fact remains that in Joffre the French have a man of proved ability.

Sir John French's going emphasizes the changed aspect of the war since last spring. It concerns the question of men and munitions. At the beginning of the war events were decided by leadership and numbers. With the commencement of trench warfare it became a question of munitions, and even now people speak of a war to be won in the armament factories. But it would really appear that the problem of munitions has been solved and that it is once more a question of leadership. At Neuve Chapelle the British ammunition gave out in a short time. It was on this issue that Lord Northcliffe conducted his drive against Lord Kitchener. There was no shortage of ammunition around Loos. Britain first had to find her men. Then she had to find guns and ammunition. Now she must find a great leader.

CONGRESS AND THE CONSTITUTION.

WASHINGTON, December 13.—Congress will be urged at its present session to *submit the question* of a national constitutional prohibition amendment to the States for ratification.

The words we have put in italics convey a false and dangerous view of the duty of Congress in relation to a proposed amendment of the Constitution. When such a proposal is presented to Congress, its duty is to consider it and pass judgment on its merits; and only in the event that the proposal is approved by a two-thirds vote of each house does it become a question with which the Legislatures of the several States have anything to do. Their share in the matter is solely in the nature of a check on the decision of Congress. That decision does not become operative until the Legislatures of three-fourths of the States have expressed their approval of it; but it is the act of Congress, and not the ratification by the Legislatures, that is the fundamental part of the proceeding.

All this would be plain enough even if the passage of a constitutional amendment by Congress were effected, like that of an ordinary bill, by a mere majority vote; but the extraordinary requirement of a two-thirds vote of each house makes it peculiarly evident. If the main part of the process were the action of the Legislatures—if the function of Congress were merely to "submit the question" to these bodies—surely a majority vote would be an ample condition to lay down. Obviously, the idea was that no amendment should be made to the Constitution which had not received the emphatic approval of the national Legislature. If the advocates of a bill in Congress, or in a State Legislature, were to urge that body not to pass the bill on its merits but to "submit the question" to the President, or the Governor, they would be laughed out of court; everybody recognizes that the veto power is designed as a check upon the judgment of the legislative body and not as a substitute for such judgment. Take, again, the case of the treaty-making power. The President's power to make treaties is limited by the necessity of ratification by the Senate; but would any one dream of asking him to waive his own judgment in relation to a proposed treaty, and simply "submit the question" of its adoption to the Senate? In all these matters, the primary and fundamental responsibility rests with the body, or the individual, that takes action on the subject in the first instance; the ratifying power is secondary, designed to provide an additional safeguard against error, and not at all to absolve from responsibility those who are charged with the duty of the primary decision.

Not only is this the actual fact in regard to the amendment of the Federal Constitution, but it is manifestly what ought to be the fact. It is only in Congress that the merits of a proposed change in the Constitution of the United States can be discussed on the large lines which are appropriate to such a question, and with a thoroughness commensurate with its importance. It is only when the subject is before Congress that public attention can be adequately centred upon it. The importance of the action then pending is so plain that the persons opposed to it, the persons in favor of it, and the persons whose judgment has not been formed, are alike upon notice to fix their attention on the question. It has a chance of receiving its due share of notice in the press. The various stages of its parliamentary progress are followed with keen interest. As the final test of strength approaches, everybody interested realizes that a decision of crucial importance is about to be made; and when the vote is taken, it is the outcome of such a contest as befits an issue of fundamental importance. If Congress were to abdicate its function, and regard itself as a mere vehicle for the placing of the question before the State Legislatures, all this would be swept away; for it is obvious that nothing of the kind would take place in the scattered proceedings of the forty-eight State Legislatures, each charged with but a small share in the responsibility of the decision, and taking it up at odd times, determined perhaps by chance, perhaps by some clever and unnoticed manœuvre.

And in addition to these broad considerations there are two circumstances of a peculiar nature which greatly add to the imperativeness of the duty of Congress to pronounce its own deliberate judgment on any proposed amendment to the Constitution. One of these turns on the gross inequality with which the population of the country is represented in the count of State Legislatures. Nevada, with 80,000 population, counts for as much as New York with 9,000,000; and in fact (by the Census of 1910) the twelve most populous States in the Union have a population of 51,000,000, while the other thirty-six States—three-fourths of the whole number—have only 41,000,000. The House of Representatives is the only place, in the whole process of passing an amendment, where the people are represented even approximately according to their number. The other circumstance is still more important. There appears to be no limit of time for the ratification of an amendment by a State Legislature. It might easily happen that these ratifications would be gradually accumulated at odd times until the requisite three-fourths was obtained, and yet that there would be no one time when three-fourths of the Legislatures in actual existence were in favor of it. If Congress is to stand aside, the whole question of the adoption of an amendment becomes a haphazard affair, devoid of almost every feature belonging to a real test of public sentiment. If we are to preserve our fundamental law from all sorts of unpredictable danger, we must adhere firmly to that view of the conditions requisite to effecting a

change in it which is prescribed alike by the language of the Constitution and by the plainest considerations of reason and justice.

AN UPRIGHT JUDGE.

Lord Alverstone, formerly Lord Chief Justice of England, whose death was recorded last week, had several contacts with the United States. He was repeatedly invited to address the American Bar Association, as his predecessors, Russell and Coleridge, had done, but was unable to accept. However, he formed the acquaintance of many American lawyers. Some of them he met at the two great international arbitrations at which he, as Sir Richard Webster, was of British counsel. We refer to the Behring Sea arbitration of 1893 and the Venezuela arbitration of 1897. But Alverstone's chief repute in this country was due to his unusual and high-minded course when he was himself a member of the arbitration tribunal which, in 1903, passed upon the Alaska boundary dispute between Great Britain and the United States. The controversy was primarily between our Government and the Canadian, and two of the arbitrators were Canadians. There were three Americans, Messrs. Root, Lodge, and Turner, so that Lord Alverstone's vote for the American contention was decisive.

It was a fact that our Senate was led to ratify the treaty to arbitrate the Alaska boundary question by a rather ignoble argument. We could not possibly lose under it, so it was said, and we might win. Our own arbitrators were certain to stand for the American view, and there was a bare chance that one of the three on the other side might be persuaded of the justice of our cause. So it turned out. But the clever people at Washington could hardly have anticipated the large and noble way in which Lord Alverstone interpreted his duty. His own account of the matter was quietly given, but so illustrates his high conception of the obligations of a judge, and so clearly points out the unfortunate nature of arbitrations without disinterested third parties taking part in the decision, that it is worth quoting:

> The papers were very voluminous, and after studying them carefully and hearing all the arguments, I came to the conclusion that I could not support the main contention of Canada as regarded the boundary, and, acting purely in a judicial capacity, I was under the painful necessity of differing from my two Canadian colleagues. I need scarcely say that, as I had appeared for Canada with success in the Behring Sea Arbitration, I only came to this decision with the greatest reluctance, and nothing but a sense of my duty to my position influenced me. I mention this because my conduct in giving this decision was the subject of violent and unjust criticism on the part of some Canadians. This feeling lasted for a considerable time, but I am bound to say that I think reflection and later consideration of the questions involved have resulted in a fairer judgment. I have always felt since that arbitration that in any dispute between nations some members of the tribunal dealing with the questions should be of a nationality independent of the two contesting parties. In this case, as I have shown, the United States and Great Britain were both represented by their own nationals, and it puts a great strain on the members of the tribunal in such cases when they have to decide against the country by which they have been nominated, without having the support of any independent jurists of another nationality.

The above citation is from the book, "Recollections of Bar and Bench," which Lord Alverstone wrote in 1914. It was published in this country early in 1915. From its unpretentious record of a great lawyer's success, one gets a very definite impression of the qualities which enabled Richard Webster to win the highest prizes of the English bar. He was, first of all, a tremendous worker. He had an industry seemingly made of iron. His intense application in the mastery of his cases led to such humorous exaggerations as that which Frank Lockwood embodied in a whimsical sketch, to the effect that Webster went to bed with his boots on, so as to lose no time. As he rose rapidly in his profession, the amount of business urged upon him was enormous. He notes simply that "for two separate periods of ten months, I had a case every day from October 12th till August 12th." But in addition to this capacity for severe labor, Sir Richard Webster impressed everybody with the great simplicity and integrity of his character. His action in the Alaska arbitration was of a piece with his whole career. Professional zeal or pride never overcame his desire that justice be done and that the soundest view of the law be established. As Attorney-General he once gave the Privy Council an opinion which it refused to accept. Thereupon, observed Lord Alverstone, "I had the mortification of writing over against my opinion in the Law Officers' Book, 'This opinion is wrong. See Walker *v.* Baird.'"

It must not be supposed that Lord Alverstone was merely a law machine. He touched life humanly in many ways. A University athlete himself, he took great interest in athletic contests, often serving as a judge of them. One of his chapters is headed "Athletics and Music," indicating his two main recreations. He writes of his membership in different glee clubs, and of his fondness for part-singing, all in a sober way, nowhere alluding to the fact that the Lord Chief Justice could sing a comic song as well as the next man. It was a life of great dignity which has closed, but also one of singular amenity. Lord Alverstone is fully entitled to a place among the worthies of the English bar and bench who not only did a man's full work in their profession, but warmed both hands at the fire of life.

Foreign Correspondence

THE COALITION GOVERNMENT—AFTER SEVEN MONTHS.

By SIR HENRY LUCY.

LONDON, December 4.

Disraeli's much-quoted aphorism about England's dislike of a Coalition Government is falsified by the result of the one over which Mr. Asquith presides. Its formation was one of his happiest thoughts, his most successful strokes of state. It was the more startling since not only was its adoption sudden and unexpected, but it was in direct conflict with recently avowed convictions. Within ten days of one on which he came down to the House and almost casually mentioned the new arrangements, the Premier, questioned on the subject, declared that coalition had not been discussed in the Cabinet circle, and committed himself to statement of the opinion that it was not desired by the public. The public was not consulted in the matter. After an experience of seven months it found reason to abandon any measure of hostile prejudice that may have existed.

It is historically true that earlier Coalition Governments, from the time of Fox onwards, have not been successful. The reason is obvious. They were based upon party expediency presenting the last desperate chance of maintaining or creating a government of any kind. It was a forced division of spoil effected between the chiefs of two hostile camps. The present Government rests on the foundation of the abnegation of party ambitions and tactics. The country was in danger, and claimed the help, not of one or other party, but of the best brains among the leaders of both. This help was freely forthcoming unhampered by conditions, freed from petty jealousies or party prejudice. Such rare conditions in political life made possible the creation and smooth working of a homogeneous body. In ordinary times and circumstances nothing is sacred to smoking-room gossip. Making free with personages prominent in public life, it is particularly active in hinting at dissension in the Cabinet. It is a fact significant to those intimately acquainted with political and parliamentary life that since last spring, when the present Government was constituted, there has not been a whisper of the imminence of its break-up consequent upon cabals of the Cabinet. The fact that there have been none would not necessarily account for this rare reticence.

The novelty of Mr. Asquith and Mr. Bonar Law seated side by side in confidential conversation, while Mr. Balfour beams on Mr. McKenna, and Mr. Walter Long hobnobs with Mr. Lloyd George, has worn itself out. But from time to time there recurs a gentle

surprise that such things can be in perfect consummation. The new recruits have fallen into their changed places as easily and completely as if they had been born to them. Each has his own department to look after, and is content to leave the leadership of the House and the general direction of affairs in the hands of the Prime Minister. On a recent occasion, when he was called across the Channel on urgent business connected with the war, he nominated Mr. Bonar Law as his deputy. In accordance with Parliamentary tradition, the Chancellor of the Exchequer in such circumstances temporarily succeeds to the leadership. Without detriment to Mr. McKenna's capacity for performing the duty, it may be counted fortunate that the moment found him too busy with his budget to take on added work. The Colonial Secretary accordingly found his opportunity and made the most of it. The House had long been familiar with him, standing at the other side of the table performing the traditional duty of the Leader of the Opposition to oppose. While admitting his ability, it was occasionally disposed to criticise his manner. At the outset Mr. Law naïvely informed the Government that he was not going to say other than disagreeable things about them. From time to time, with the chivalrous prevision of the curate in "The Private Secretary," he announced that he was going to "give them a good hard knock." Time and experience blunted the sharp edge of this little mannerism. His attitude and speech as representing the Leader of a House in which opposition is practically non-existent entirely freed him from it. He was at once urbane and dexterous, with touches of personal frankness that lent novelty to a speech delivered from this quarter of the House. He made a distinct advance in the esteem of the critical assembly closely watching and listening.

Mr. Balfour habitually effaces himself from the position of prominence and authority demanded by his personality and his high office. He drops in occasionally at the question hour and admiringly listens to Dr. Macnamara answering questions addressed to the First Lord of the Admiralty. Thereafter departmental business of a pressing character calls him away. Only once since he took his seat on the Treasury Bench has he come to the front. Called by critical inquiries into the doings of the navy, submitted by an honorable friend below the Gangway on the Ministerial side, he delivered a speech of considerable length, which testified that his long retirement from active participation in public affairs has not lowered his old form as a Parliamentary debater.

As a rule, the First Lord of the Admiralty, in common with his colleagues on the front Opposition bench, is content to confine his energies and his interposition in the day's proceedings to matters concerning his own Department. This is a course of conduct that naturally accompanies an abnormal state of Parliamentary affairs. There being no organized opposition, there is nothing in the way of a full-dress debate. The longest speeches of Mr. Chaplin, unofficial Leader of the Opposition, take the form of daily inquiry as to the business of to-morrow and the day after, or to gentle advice to restive members of the motley team on the front bench to be gentle with his Majesty's Government such as it is. If by chance debate were to arise on one of the traditional issues, say a vote of confidence in the Government, the Prime Minister would be able to muster on the combined wings of the forces at his command an incomparable array of Parliamentary swordsmen.

The state of affairs in India affords Mr. Chamberlain no chance of distinguishing himself in his new office. Happy is the country that has no annals. One night last week the Secretary of State, in charge of a small measure affecting the internal affairs of India, was privileged to address an audience of sixteen members. He had one opportunity of which he made the most. Replying to a friendly question, he enumerated the names of the princes and chiefs of native states who have come to the assistance of Great Britain in time of peril. The ease and accent with which he declaimed the catalogue of sonorous Indian titles excited the marvel and admiration of the House. Busiest among new members is Mr. Walter Long, who has this week added to earlier legislative successes a bill usefully restraining the tendency to raise rents upon small house property.

A NEW FIELD OF WAR—PARTANT POUR LA SYRIE.

By STODDARD DEWEY.

PARIS, December 1.

In this war of wars, we are not only learning more geography than we thought possible when we were schoolboys, we are also growing familiar with all sorts and conditions of men, who would have been fit subject-matter for some university course in ethnography, let alone ethnology. It interests us now. The yellow splotch on the map which I remember as Turkey in Asia takes on new details daily. Palestine was always a household word. What most of us knew about Syria was that Napoleon laid siege there to St. Jean d'Acre, and that Queen Hortense gave her name to an army song which shows how simple-hearted the world was then:

> When he left for Syria,
> Handsome, young Dunois
> Prayed the Holy Virgin
> To bless him in the war:
> "O immortal Queen," he prayed,
> Sailing o'er the sea,
> "Let me love the most beautiful,
> And let me bravest be!"

Perhaps the next weeks, or the next months, will see handsome, young Frenchmen sailing away again to Syria, as they are now sailing to Salonica, which is on the way; and most of them will pray just as Dunois did, though hardly in the same words, but more likely in traditional prayers which the real Crusaders used. They are not the only traditions of her past which France has in Syria.

In these last days, the news and the talk of war make it more and more likely that the Allies will have to extend their expeditions to Syria, and, even if they have not, may very well do so. It is late in the day, perhaps Syria is not the place for an armed diversion that may make the Turks leave off massacring the Armenians who are still alive. Yet the Romans got possession of Syria by subduing Tigranes, King of Armenia. Possibly a more urgent military reason will be the defence of the Suez Canal and Egypt against any expedition of the enemy. The working of the English towards Bagdad will help the fitness of an advance of France on Syria.

All names like these bring back the "spheres of influence" on which Germany, before she exploded them by war, insisted complainingly and threateningly, and by which she was profiting. Before Germany put her mailed fist on all this Turkey in Asia, the United States alone—what with buying goatskins and sausage-casings in Asia Minor and carpets in Smyrna—had more of the country's trade. France showed herself amiable, and let her people supply the necessary funds when it was decided that Germany should build and exploit the Bagdad railway and land route to the East. Germany meanwhile used her clergy, according to her usual methods, to supplant the French protectorate over Catholics, which would have been the death-blow to the already old influence of France in Syria.

It must be said that neither there nor elsewhere in exotic countries have German methods proved conciliatory of natives or their rulers. The older newspaper men in Paris remember Laurence Oliphant, who experienced erratic religion with Thomas Lake Harris in America, then did journalistic fireworks for the London *Times* in Paris during that other war of France with Germany, and, last of all, retired to the foot of Mount Carmel—where he found the curious German colony, half-religious, half-agricultural, and altogether national. The French republic has not so carefully attended to Syrian culture, although religious enterprise has scattered French men and women from their university town of Beirut to the least villages of the interior.

It should be remembered that Syria, by its people, is not so much Turkish as Arabic. Its territory stretches from Arabia to what ought to have been Armenia. There is the usual mixture of races and religions of this part of the world. There are 1,500,000 orthodox Mussulmans, like the Turks, but showing no great sympathy with them. There are 200,000 Mussulmans of unorthodox persuasion, 200,000 Druses, 150,000 Jews, 500,000 Christians, called simply Syrians, and 400,000 Maronites, 200,000 Greeks, and 50,000 Latins (numbers of the Maronites and others are also in communion with Rome).

For Mussulmans, the Turks have been all along alive to the danger of alienation. A year ago as many Arab Syrians as had a claim to clerical influence among their people were called to Constantinople and indoctrinated with a sound form of words for their teaching at home. The result has been a most Oriental address of thanks to the German Emperor for the lamp which he gave to the Grand Mosque of Damascus. In spite of all, Syrian agitators continue to demand a French military administration such as they have seen at work in other Mussulman countries, entrusted to officers used to Arabs and their religious and civil customs. Such administration has been successful in Algiers and Tunis, and now in Morocco.

Some expect an explosion of Mussulman fanaticism, encouraged by what has been allowed to go on among the Armenians. This seems unlikely, for Syria has never been constituted into a political unity by the Turks, and races are now too balanced for one to attack murderously the other, as Kurds do to Armenians. Some of us, indeed, remember the Druses' massacres of Maronites, which brought about the last intervention of French troops sixty-five years ago, and enough disunion remains to lessen the importance of late news, even if true, about Djemal Pasha, one-time Turkish Minister of Marine, having raised the standard of insurrection in the

Syrian mountains against the Young Turks.

Where would the expeditions of the Allies disembark, if they should wish to enter Turkey in Asia from this side? It seems they have been talking about it. It was suggested that the English should enter by Alexandretta, to cut off the railway by which Germans and Turks hope to reach Egypt. It is said that Abdul Hamid, cleverer than his successor, insisted the line should be laid winding absurdly in and out of the mountains, so as to prevent it being exposed to any attack from the sea. This would oblige the attacking expedition to fight step by step through fastnesses defended by the stanchest adherents of the Sultan. For fifteen years the Germans have studied all this ground. In 1913 they were narrowly prevented from landing an expedition of their own—to prevent Turkey massacring Armenians! They have done everything to counteract French influence, which had always been paramount in this region, by establishing everywhere banks and trade, schools and electricity, along with their military explorers.

If anything is done by the Allies, it is more likely to start from the neighborhood of Beirut, where the French are favorably known and where they are at home. This region is also that which for many years has received subsidy and help from the many Syrian emigrants to the United States. The overbearing manner of the Germans in these regions has already indisposed the natives against them; and there is little love lost on the Turks.

There can be no question of another great expedition of the Allies, after Salonica. The attack on the Asiatic coast of Turkey would admit only of the method which the French have blamed elsewhere—that of *petits paquets*. It has been urged, perhaps not seriously, that the defence of the Suez Canal should be entrusted to the Japanese, who are also Allies. A Frenchman who knows the Syrian country (Marius Leblond) proposes that yet another ally should be summoned, one fitted for dealing—under Islamized French officers—with the population—Portugal!

THE CORONATION OF EMPEROR YOSHIHITO.

By YONE NOGUCHI.

TOKIO, November 10.

The Japanese passion for festival making, though not in mere song and wine, as in the dear old romantic, foolish, and rotten feudal days (it was only in festival making that the Tokugawa civilization managed to turn a passion into a system), has now with the ceremony of coronation again justified and even encouraged itself. Modern Japan, which often seeks a heterogeneous aspiration, has at once stepped back, as it seems, into the old age with only one song in heart, that is the song of life's joy. You will not believe your eyes when you see Japan (who was wearing even a cosmopolitan sack coat) dressed in a historical symphony of hues in silk and brocade, wearing ancient lacquered wooden shoes. This temporary creation of old Japan in the very heart of new Japan was begotten, happy to say, not merely from a reminiscent mood of a tired brain, but from realization that the very new Japan is nothing but the real old Japan on whom I exclaimed:

> Marvel of thy every atom burning in life,
> How fully thou livest!

This true old Japan, united heart and soul in a perfect compact, was voiced when the people all at once shouted their *Banzais* that the Empire should live, to use the words of the national anthem, "till tiny pebbles grow into giant boulders covered with emerald mosses," when our Emperor Yoshihito formally stepped up on to the Takamikura or Imperial High Throne at Shishinden Palace in Kyoto; indeed at this moment, half-past three o'clock of the tenth of November, while I am writing this brief article, my ears are deafened and stunned by the outburst of shouts from all the neighboring houses at the very time when the Emperor proclaims that "He is the holder of the Imperial seat of unparalleled antiquity descending from the Emperor Jimmu, the founder of Japan, and the very successor to his illustrious father, the Great Emperor of Meiji." Not only the conservative minds are glad to see the living proof of the Imperial House as the unshaken centre of devotion; this coronation, indeed, has proved the perfect consolidation of all Japan. And as it is the time when even in Japan we hear a dangerous sort of so-called socialism or even anarchism in broad daylight, such a proof of the nation's solidity is a joy itself.

My mind dwells on the ancient court costumes, in which the Emperor appeared before the Imperial ancestral divinities to announce the fact of his succession to the Imperial rule and his coming into possession of the Sacred Treasure. He made his presence with a lacquered wooden crown and *shitatare* of silk and brocade, not with a diamond-decked crown and sword like a European king. I have the following lines in my English diary: "The blazing crowns, sceptres, and swords in Wakefield Tower looked as if confessing, I dare say, a certain love of barbarism or brutal splendor of the British mind; I could not help thinking at this moment about the lacquered wooden crown and the wooden sceptres with which our old Emperors of Japan stepped up into the seats of the throne. Look at King George V's crown, with 3,200 diamonds and pearls, weighing some 2½ pounds. Oh, what wealth of England; and again what barbarous splendor!" But what poetry and art in our Japanese Emperor's lacquered headgear and sceptre! True, our Emperors, all of them, have stepped up on to the throne with hearts of love and beauty; and now again the Emperor Yoshihito has assumed his Imperial Throne not with a menacing sword and dazzling crown, but with the thought of love and peace.

The term coronation that here I use is an analogy; for the ceremony does not mean, as in Western countries, the placing of an hereditary crown upon the head of the ruler. Although we can say that that sort of crowning ceremony (there is no person, however, to crown the Emperor, he crowns himself when he takes possession of the Sacred Treasures which, it is said, were handed down by Amaterasu Omikami or the Sun Goddess) is one of the important proceedings, the main idea of the coronation is that the Emperor augustly announces his rule of the land to all his ancestors; the reason of the great importance of the Daijo Festival on the Fourteenth Day is that he, as the new Emperor, personally offers the new crop of rice of the year to the Sun Goddess and all the deities of heaven and earth as the first thing, and then himself partakes of it and shares it with his subjects. Japan was named of old the "Land of the Beautiful Rice Crop," and rice has been ever the principal foodstuff of her people; the performance of this harvest thanksgiving is from a real sense of gratitude towards the ancestors under whose blessing the country's peace and prosperity is assured. And in the Emperor's sharing of the new sacred crop with his subjects, we read the very meaning of his love of the people, as well as his encouragement of agriculture; indeed this Japanese coronation is the reunion of the ruler and the ruled more than anything else. Since the Daijo Festival occupies the most important place in the whole programme, the sacred grain used in the ceremony was grown in the two fields called "Yuki," in Aichi Province, and "Suki," in Kanagawa Province, which were selected many months ago as the most suitable fields. The fields, when they were chosen, were surrounded by bamboo fences; on the east and the west side were put up a Gate of the Imperial Messenger, the gate on the north side being for general admission. A ditch about six feet wide surrounded the fields for the purpose of draining off the surplus water and dirt; the fields, which were cultivated by ninety men and thirty women by special appointment, were divided into four equal sections by a crossway from the centre. And on the eastern corner was built a sentinel house where the reserve soldiers during the night kept a constant watch; and every morning a Shinto priest performed a rite for opening the day, and purified a basin of salt water with which the men and women who came to work cleansed themselves. With such pains the grain to be used at the Daijo Festival was obtained.

We college students and professors were given a place outside the palace to see the Emperor off to Kyoto on November 6; we all appeared on the ground as early as three o'clock in the morning, and patiently waited for the Imperial train to pass before us. I believe that a short service was performed at the "Kashikodokoro," or Imperial Sanctuary, where the Sacred Treasure was enshrined, before it was placed in a palanquin called "Amano Haguruma," or "Feathery Wheel of Heaven"; and it was duly brought out of the palace with the announcement of the Emperor's departure for the station on his way to Kyoto. The Emperor followed the "Kashikodokoro" along the beautifully decorated road, amid the devoted multitudes. The "Kashikodokoro" was carried reverently by men attired in ancient costume; to it our heads lowly bent in the thought that the old palanquin, nothing unusual in appearance, held the three treasures, the sword, the band necklace, and the mirror, which, as I said before, were handed down from the Sun Goddess. Indeed they are merely a sword, a necklace, and a mirror; but allow my modern mind to consider them as symbolic of Courage, Mercy, and Knowledge. When the Sun Goddess gave her grandson the divine Mirror, Yada no Kagami, she said: "When thou lookest upon this mirror, let it be as thou wert looking at me. Let it be with thee in thy hall and on thy floor." Therefore no Emperor is a right ruler without the mirror of the Sun Goddess.

The Realism of Arnold Bennett

AN ESTIMATE OF BENNETT'S PHILOSOPHY AND SOME INVIDIOUS DISTINCTIONS.

By STUART P. SHERMAN.

In a discussion of Mr. Dreiser's work, recently printed in these pages, I offered a protest against the confusion which results from calling all novelists who deal with contemporary life realists; and I proposed, as a means of making useful distinctions among them, a scrutiny of the bundle of general ideas which constitutes for each his "working philosophy," and which, as I maintained, necessarily underlies the artistic representation of each and in considerable measure determines its form. Having proposed to distinguish Mr. Dreiser as a naturalist on the basis of his theory of animal behavior, I felt the need of supplementing my argument by exhibiting the relationship, in some conspicuous exemplar, between genuine realism and a respectable theory of human conduct.

I.

Arnold Bennett at once appeared in at least one respect to be the most promising candidate for the position. His works, to be sure, are of very unequal value, for, frankly writing to live, he has diversified the production of masterpieces by the production of potboilers. But all sorts of good judges unite in declaring that his best novels—"The Old Wives' Tale," "Clayhanger," "Hilda Lessways," and the newly published "These Twain,"* completing the Clayhanger trilogy—produce upon them an unprecedented impression of reality. These books, we are told, challenge and endure a comparison not with literature, but with life itself. Their "transcript" of Five Towns society is so detailed, so nearly complete, and so accurate that it may be used by the student of human nature with almost the same confidence that he places in his own first-hand observations. I was glad to find general agreement on this point, for it relieved me of the task of justifying my own conviction that Mr. Bennett is a realist.

The only objection that I saw to the choice of Mr. Bennett as the contemporary realist was that the very critics who praise the reality of his representations insist rather sternly that he has no "philosophy of life," that he does not interpret his facts, that his value resides wholly in the energetic integrity of his transcript. Mr. Darton, who has just written a book about him, and who is himself a novelist, says: "In the Five Towns novels there is no ideal. There is no criticism. There is no tradition or philosophy of society. There is nothing but life as the people described live it and see it and feel it." This is highly interesting, if true. If true, it effectively disposes of my contention that an artist cannot observe without a theory. If true, it should suggest to the younger realistic writers who are looking to Mr. Bennett as their master the wisdom of making all haste to get rid of their ideas.

Mr. Darton's assertion that Arnold Bennett's work has no value save that of mere representation was anticipated by Mr. Henry James in his discussion of the "new novel" in 1914, and was by him extended to an entire group of the younger writers, of which he specified Mr. Bennett and Mr. Wells as the leaders. The distinguishing characteristic of the group, according to Mr. James, is "saturation." By this he means, as I take it, that all these novelists, and to a high degree their leaders, are masters of the materials of their art. They know with extraordinary completeness and detail *what* they are talking about. When they have made us see what they have seen, they yield us no further satisfaction. They squeeze the sponge or, as Mr. James puts it, the "orange"; this gives us an "expression of life." Expectant but disappointed criticism cries: "Yes, yes—but is this all? These are the circumstances of the interest—we see, we see; but where is the interest itself, where and what is its centre, and how are we to measure it in relation to that?"

I cannot follow a critic who finds Wells and Bennett alike in their dominant value, and, what is far more interesting, neither can Mr. Wells! Stung to the quick of his celestial mind by the polite implication that he is only a thoroughly immersed sponge, he has retorted in his semi-pseudonymous "Boon," 1915, with a scathing criticism and a "take-off" on Mr. James, whom he links with Mr. George Moore by virtue of their sterile æstheticizing. That is *their* dominant "value"—their central "interest." His own central interest, as he reasserts with more than customary vehemence and formlessness, is the expression of his yearning for a life of divine efficiency and divine ecstasy. He has a theory of conduct which has developed out of that romantic yearning; and his representations of life in fiction are experimental illustrations of that theory. It is quite absurd to charge an author with "mere representation," who almost invariably bursts the outlines of his hero, disrupts his narrative in mid-career, shatters the illusion of reality, and buries all the characters under the avalanche of his own personal dreams and desires. Mr. Wells, in brief, cherishes a "philosophy of life" which makes it impossible for him to write a realistic novel. He is dedicated to romance. His high calling is to write pseudo-scientific fantasies and fairy tales of contemporary society.

Mr. Wells in "Boon" incidentally repudiates yoke-fellowship with the novelist of the Five Towns in a passage which gives us the key to Mr. Bennett's philosophical position. Mr. Bennett is there recorded as a "derelict," an "imperfectly developed," an "aborted" great man surviving from the old times: "Would have made a Great Victorian and had a crowd of satellite helpers. Now no one will ever treasure his old hats and pipes." This is both amusing and instructive. Mr. Wells does not call a man a Victorian without malice aforethought. If I may be pardoned a violent expression, Mr. Wells would like to slay all the Victorians; better still, he would like to believe that they are all dead. What he objects to in that generation is not the "mere representation" of the novelists; it is the accursed philosophy of life which underlies their representations. Mr. Bennett rises up to prove, alas, that this philosophy is not dead yet. His solid realistic novels protest against Mr. Wells's fairy tales. His vision of life protests against Mr. Wells's vision of life. "The Old Wives' Tale" makes "The Research Magnificent" look like child's play. Put "These Twain" beside "Marriage," and instantly the art of the latter seems flimsy and incondite, and its informing ideas fantastic. And one may perhaps just note in passing that beside any one of Mr. Bennett's novels, Mr. Dreiser's "Genius" instantly appears to be a "barbaric yawp." An author whose work thus judges, so to speak, another work with which it is brought into contact, has a potent critical value meriting examination.

II.

The popular impression that Mr. Bennett has no general ideas is easily explained by the fact that he does not attempt, as Mr. Wells does, to break down the boundaries between the literary *genres*, and to make the novel serve at the same time as a narrative of events and as a philosophical dissertation. Respecting the personalities of his *dramatis personæ*, wishing to preserve the sharpness of their outlines in their own atmosphere, he does not impute to them his ideas nor set them to discussing them. With a restraint unusual among English novelists, he refrains from "editorial" comment upon his "news." When he wishes to set forth his ideas, he writes a book of popular philosophy: "Mental Efficiency," "The Feast of St. Friend," "The Plain Man and his Wife." If these books were as well known to the American public as the novels are, we should hear no more in this country about Mr. Bennett's lack of ideas. On the contrary, all our women's clubs would be debating, in their eager, simple-hearted fashion, "The Philosophy of Arnold Bennett."

Mr. Darton, more sophisticated than our fellow-countrywomen, says in effect that the philosophy of Mr. Bennett is not worth discussing. The works named above have been advertised in England, he tells us, as containing "big, strong, vital thinking." But, he continues, " 'big, strong, vital thinking' is just what these remarkable little books do not contain. They contain the completest common-sense, expressed with astonishing simplicity and directness, and based upon unimpeachable honesty of outlook. They are a guide to efficiency, to self-help, to practical idealism, to alertness of intelligence, to sinewy culture, to every high quality which every crass Briton has always thought the crass Briton does not show. The United

*New York: George H. Doran Co.

Kingdom is . . . almost overstocked with agencies for the purpose, from the physical energies of Mr. Sandow to the benevolent writings of the late Lord Avebury. . . . They are quite perfect lay sermons. But"—and this is the damning word—"they are not original." I perfectly agree that Mr. Bennett's general ideas are not "original," and commend his judgment in not tying up his art to anything so transitory as a "new" philosophy. I object to the implication, in which Mr. Wells will rejoice, that because they are old they are dead or deficient in strength and vitality. I will not stand upon the word "big," a term which should be reserved for the use of advertising managers and radical reformers. But I cannot reconcile Mr. Darton's description of these books as guides to every high quality needed by the crass Briton with his assertion that there is no criticism in the Five Towns novels, except on what seems to me the untenable assumption that Mr. Bennett, the popular novelist, and Mr. Bennett, the popular philosopher, are distinct and non-communicating beings.

The beginning of wisdom, according to this philosophy, which runs counter to our current naturalism, is the recognition of a fundamental duality in human experience. Mr. Bennett presumes not God to scan, but looking into himself as a microcosm, reports that the universe consists of a power-to-control, which is the quintessence of man, and of a power-to-be-controlled, which is nature. The zest, the object, and the compensation of existence lie in the possibility of extending the dominion of the human over the natural power. "For me," he says, "spiritual content (I will not use the word 'happiness,' which implies too much) springs from no mental or physical facts. It springs from the spiritual fact that there is something higher in man than the mind, and that something can control the mind. Call that something the soul, or what you will. My sense of security amid the collisions of existence lies in the firm consciousness that just as my body is the servant of my mind, so is my mind the servant of *me*. An unruly servant, but a servant—and possibly getting less unruly every day! Often have I said to that restive brain: 'Now, O mind, sole means of communication between the *me* and all external phenomena, you are not a free agent; you are subordinate; you are nothing but a piece of machinery; and obey me you shall.'"

The responsibility for extending the dominion of man over his own nature, and, indirectly, over his remoter circumstances, Mr. Bennett, in opposition to our popular sociological doctors, places primarily upon the individual. While Mr. Wells, for example, urges us to cast our burdens and our sins upon society, and goes about beating up enthusiasm for schemes to improve the "mind of the race" by leagues of Samurai and legislative enactments, Mr. Bennett fixes his eye upon plain John Smith, and says: "I am convinced that we have already too many societies for the furtherance of our ends. To my mind, most societies with a moral aim are merely clumsy machines for doing simple jobs with a maximum of friction, expense, and inefficiency. I should define the majority of these societies as a group of persons each of whom expects the others to do something very wonderful. Why create a society in order to help you perform some act which nobody can perform but yourself?" Arnold Bennett says disappointingly little about that "big" idea, "the mind of the race." And whenever he contemplates that impressive and admired abstraction, "the backbone of the nation," it resolves itself under his realistic gaze into the by-him-no-less-admired but certainly less generally impressive spinal columns of John Smith and other homely vertebrates.

In dealing with the relations of John Smith to Mrs. Smith, the Victorian Bennett feels obliged to say, in opposition to those who hold out for these plain people the prospect of a life of freedom and sustained ecstasy to be attained by upsetting the established social and economic order, that the ideas of freedom and ecstasy are romantic will-o'-the-wisps. In the recent "evolution" of society he perceives rapid changes for the better in living conditions and a gradual amelioration of manners and tastes, but no significant alteration in the elements of human nature. "Passionate love," he insists, "does not mean happiness; it means excitement, apprehension, and continually renewed desires." "Luxury," he adds, "according to the universal experience of those who have had it, has no connection whatever with happiness." "Happiness as it is dreamed of cannot possibly exist save for short periods of self-deception which are followed by terrible periods of reaction. Real practicable happiness is due primarily not to any kind of environment, but to an inward state of mind. Real happiness consists, first, in an acceptance of the fact that discontent is a condition of life, and, secondly, in an honest endeavor to adjust conduct to an ideal."

It must infuriate an advocate of moral revolution and loose fluent sensuality, like Mr. Wells, to hear Mr. Bennett, bracketed with him as a leader of the new school, asserting that "the great principles, spiritual and moral, remain intact." It must perplex an apologist for moral anarchy and strident self-assertion like Mr. Dreiser to find a fellow-realist declaring that "after all the shattering discoveries of science and conclusions of philosophy, mankind has still to live with dignity amid hostile nature," and that mankind can succeed in this tremendous feat only "by the exercise of faith and of that mutual good-will which is based on sincerity and charity." But what must distress them both beyond measure is this able craftsman's exposition of the relation of moral conventions to artistic form. "What form is in art, conventions are in life. . . . No art that is not planned in form is worth consideration, and no life that is not planned in conventions can ever be satisfactory. . . . The full beauty of an activity is never brought out until it is subjected to discipline and strict ordering and nice balancing. A life without petty artificiality would be the life of a tiger in the forest. . . . Laws and rules, forms and ceremonies, are good in themselves, from a merely æsthetic point of view, apart from their social value and necessity."

These are the ideas of a man who has taken his stand against Mr. Wells's Utopia on the one hand and against Mr. Dreiser's jungle on the other. As old as civilized society, they have the conservative complexion of all traditional and enduring things. They are not worth discussing if they are not challenged. Like fire and water, they do not appear vital till they are denied. Ordinarily a novelist has not needed consciously to concern himself with them, unless he has intended to trample them under foot. But in the face of the present naturalistic invasion, when humanistic ideas are in the trenches, fighting for existence, a novelist who paints men in preference to tigers, supermen, or scientific angels, has interestingly taken sides.

III.

The general theme of Mr. Bennett's masterpieces, determined by the central interest of his philosophy, is the development of character in relation to a society which is also developing. He has no foolishly simple mechanical formula for expressing the nature of the relation between the individual and the social process. He has rather a sense that this relationship involves an interplay of forces of fascinating and inexplicable complexity.

His sense of the marvellous intricacy of his theme explains his elaborate presentation of the community life in which his principal figures have their being. He is bent upon bringing before the eye of the reader every scrap of evidence that may be conceived of as relevant to the "case." The reader who believes that character is determined mainly by inherited physiological traits finds in the Five Towns novels a physiological account of three successive generations. The reader who holds that education is the significant factor is abundantly supplied with the educational history of father and children and grandchildren. The reader who lays stress upon a changing environment and the pressure of the hour sees how from decade to decade and from year to year the hero or heroine is housed and clothed and fed and occupied and amused; and wrought upon by parents and children and relatives and friends and servants and strangers; and subjected to the influences of social customs and business and politics and religion and art and books and newspapers transmitting to the thick local atmosphere the pressure of the world outside. The reader who looks for the main currents of the nineteenth century in the Five Towns discovers the Clayhanger family and their neighbors developing in relation to the democratic movement, the industrial revolution, the decay of dogmatic theology, the extension of scientific thought and

invention, the organization of labor, and the diffusion of æsthetic consciousness. One's first impression before this spectacle is of admiration at the unrelenting artistic energy which keeps this presented community life whole and steady yet perceptibly in motion through a long span of time.

One's second impression is of admiration at the force of composition which keeps the principal figures from being "swamped" in the life of the community. They are immersed in it and dyed in it and warped and battered and grooved by it; yet they are never made to appear as its impotent creatures; somehow they are made to emerge above their "environment" as its creators and preservers—its plain, grim, but enduring heroes. The secret of this "somehow" is that Mr. Bennett implicitly recognizes as an artist what he explicitly declares as a popular philosopher, namely, the existence in the individual of something deeper than the body, deeper than the mind—an ultimately responsible, independent, spiritual self, with the power to control, in some measure, its circumstances. In his preface to "The Old Wives' Tale" he tells us that the originating impulse of that work was a conviction that a "heart-rending novel" might be written to express "the extreme pathos in the fact that every stout, ageing woman was once a young girl with the unique charm of youth in her form and movements and in her mind." The theme as he states it is only the threadbare platitude of Cavalier poetry—the deciduousness of physical beauty; and its pathos is only skin deep. But the theme as he develops it is the spiritual truth sung by the Puritan—"only a sweet and virtuous soul, like seasoned timber, never gives"; and its pathos is indeed heart-rending. Constance and Sophia, the two heroines of "The Old Wives' Tale," appeal to tragic compassion not because they were young and fair and have grown old and grotesque, but because they hungered for love and life yet have quietly and proudly starved in their respectability rather than touch a morsel of forbidden food. After a considerable course of reading in the "temperamental" novels of the naturalistic school, one begins to feel that the resisting power of formed character has vanished from the earth. I shall not soon forget the sigh of relief that I uttered when I came upon a certain passage in the story of Sophia's resistance to the various invitations of Parisian sensuality. The poor girl in her loneliness craving for sympathy and affection finds her physical and mental self responding involuntarily to the ardent wooing of the kindly Chirac. "'My dear friend,' he urges with undaunted confidence, 'you must know that I love you.' She shook her head impatiently, *all the time wondering what it was that prevented her from slipping into his arms.*" She does not slip into his arms; and one rejoices—not because one's moral sense is gratified, but simply because one is pleased to find occasionally a novelist who recognizes an inhibited impulse, in the sexual connection, as among the interesting "facts of life." Though the self of a person with the power of inhibiting impulses may have no definite circumference, it has a defined centre, about which the framework of character may be built. Mr. Bennett portrays persons with various powers of inhibition, but his heroes have, or achieve, character. The interest of his story centres in the deliberate acts of rational beings, who are conscious, like Hilda Lessways, of their miraculous power to "create all their future by a single gesture"; and so the rich mass of his observations becomes a coherent illustration of human responsibility.

The Clayhanger trilogy, triumphantly completed by the publication of "These Twain," expresses with the moving force of dramatic representation the ideas more simply exposed in "The Plain Man and His Wife." The first volume has for its theme the development of the character of Edwin Clayhanger from the eager formlessness of his boyhood to the steadiness, honesty, application, efficiency, solidity, tolerance, justice, and self-control of his manhood. The theme of the second volume is the development of the character of Hilda Lessways from the innocent, ignorant rebelliousness and rapturousness of girlhood, through a brief ill-advised matrimonial adventure, to the vibrant, hopeful, open-eyed egoism and rather grim determination of early womanhood. The theme of the third volume is the further development of this "dynamic" and that "static" character through the difficult and at times almost baffling process of adapting themselves to living together as man and wife. Taken together, the three novels constitute an impressive criticism of Mr. Wells's theory of the life of sustained ecstasy and, if you please, of Mr. Dreiser's theory of the life of ruthless animality.

It is clear that Mr. Bennett has attempted to present in the completed trilogy an adequate account of the fiery conflict, with typical antagonists, of the Eternal-Feminine with the Eternal-Masculine. If you are a man, you will writhe, or you ought to writhe, at the exposure in Edwin of your own obstinate conviction that you think straight and that your wife does not, and at the exposure of your hot fits of indignation at her shifty evasions of your flawless argument. If you are a woman, you will blush, or you ought to blush, at the exposure in Hilda of your own illogicality and your willingness to gain ends—commendable no doubt—by perfectly unscrupulous means. Hilda respects and loves her husband deeply, but she is irritated by his colds, by his little set habits, by the deliberateness of his temper, and by the inarticulateness of his appreciation of her. Edwin loves his wife and feels the charm and force of her personality; but he distrusts her intellect and cannot entirely approve of her morality. He is exasperated by her interference in his business. He keenly resents the injustice in which she involves him through acts inspired by her ambition for him and by her passionate and jealous devotion to the advancement of their own family interests. She develops social aspirations in which he does not share, and a desire for a style of living which promises him increased burdens with no added satisfactions. Their common effort seems to multiply luxuries and superficial refinements without in the least sweetening or deepening or strengthening their spiritual intercourse. He tells himself in a moment of intense self-commiseration that the great complex edifice of his business, "with its dirt, noise, crudity, strain, and eternal effort," exists solely that Hilda may exist "in her elegance, her disturbing femininity, her restricted and deep affections, her irrational capriciousness, and her strange, brusque common-sense." He asks himself in poignant self-pity: "Where do I come in?" After repeated scenes of domestic tension he walks out of his house and home with hot brain and twitching nerves. He mutters to himself: "She won't alter her ways—and I sha'n't stand them." In what he takes for ultimate despair, he says to himself, "as millions of men and women have said to themselves, with awestruck calm: 'My marriage was a mistake.'"

But as this plain, average man wanders aimlessly through the streets of the Five Towns with tumult in his breast, confronting the ruin of his private universe, he has an experience comparable in character and significance with that of Thomas Carlyle when in sultry Leith Walk he authentically took the Devil by the nose. When his brain cools and his nerves stop twitching and his formed character returns to its equilibrium, he has first a flashing intuition into a method by which he can reconcile himself to his "universe." "It was banal; it was commonplace; it was what every one knew. Yet it was the great discovery of all his career. If Hilda had not been unjust in the assertion of her own individuality, there could be no merit in yielding to her. . . . He was objecting to injustice as a child objects to rain on a holiday. Injustice was a tremendous actuality! It had to be faced and accepted. (He himself was unjust. At any rate, he intellectually conceived that he must be, though honestly he could remember no instance of injustice on his part.) To reconcile one's self to injustice was the master achievement. . . . He yielded on the canal-bridge. And in yielding, it seemed to him that he was victorious." He has found content by accepting discontent as a condition of life, and by honestly endeavoring to adapt his conduct to an ideal. In his recognition of the need of a more flexible intelligence and a stiffer backbone he embodies at once the principle of progress and the principle of conservation. He is the hero of his generation, not victorious but conquering. He cannot stand like Benham in "The Research Magnificent," and say, "I am Man. The Thought of the world." But he might stand, if he had the habit of attitudinizing, and say, "I am a man. A vertebral unit in the backbone of the nation."

One cannot plan a life in conventions without cutting out of it many wayward desires and "beautiful impulses." The young lions

and lionesses of radicalism are forcing the question upon us whether one can plan a life in beautiful impulses and wayward desires without cutting out the plan. Mr. Bennett answers in the negative, and votes for preserving the plan. I do not undertake to speak critically of his philosophy. I only observe that it seems to support an altogether decent theory of human conduct. And this in turn underlies an artistic representation of life remarkable for its fulness, its energy, its gusto, its pathos, its play of tragic and comic lights, its dramatic clashes, its catastrophes, and its reconciliations—in short, for its adequacy. I fear that my reasoning will not make much impression upon the young, for the young, as Mr. Randolph Bourne tells us, are in love with life; and to accept conventions is to reject life. The young will still turn to Mr. Wells, "for he," says one Rebecca West, of London—penning for the *New Republic* perhaps the most delicious sentence in modern criticism—"for he has inspired the young to demand clear thinking and intellectual passion from the governing classes, instead of the sexual regularity which was their one virtue and which, he has hinted, is merely part of a general slothfulness and disinclination for adventure." As I sadly take my obscure place in the rear of the "cretinous butlers" who "do not like Mr. Wells," I summon my Christian charity to declare that much shall be forgiven a champion of Mr. Wells, whose critical arrows go singing, like this sentence of Rebecca West's, straight to the heart of laughter.

Notes from the Capital

JOSEPH G. CANNON.

The other evening some one, alluding to the personal appearance of Joseph G. Cannon, of Illinois, compared him to the prophet Ezekiel. Up sprang Cannon, who was within hearing. "You're wrong," he exclaimed, swinging his long left arm around his head in one of his flail-like gestures. "Ezekiel was driven into exile and stayed there; but I've come back!" It is doubtful whether a half-dozen men in all Washington, including the clergy, could have been so quick to detect the weak spot in the parallel; but it is one of Cannon's great points as an orator that you cannot find a Scripture story which he doesn't know by heart. He has sometimes said that the only books he ever saw as a boy, outside of his common-school textbooks, were the Bible and Josephus.

The arm-swinging was quite as characteristic. Cannon formed the habit when he first became a public orator, and he is helpless without it. Once, in a debate, while Carlisle was Speaker, he tried to beg a few minutes' time from the late "Sunset" Cox, who happened to have the floor.

"If the gentleman from Illinois will put his hands in his pockets," said Cox, "I will yield the floor to him for as long a time as he will keep them there."

Into his side-pockets dived Cannon's hands at once; but before he had finished three sentences out they came again, and went whirling around his head. Down came the Speaker's gavel: "The gentleman's time has expired!" And Cannon dropped into his seat amid the roars of the House.

Cannon has now been a national figure for forty-three years, having received his first election to Congress in 1872. From the day he entered the Capitol he has been a power there. In 1890 he was defeated for reëlection, just as were McKinley and other advocates of the High Tariff Act of the Fifty-first Congress; but, after trying some one else for a single term, his constituents were glad to send him back to his old place. The same thing has happened this time. There have been revolts against his authority as Speaker, and columns of newspaper space have been royally expended in showing what a bad man he is, and yet it does not seem possible to make most people believe it for long. The truth undoubtedly is that, while no one can deny that Cannon has serious faults, he has also some compensating qualities which come into strong accentuation when his enemies overdo their censure of him. The professional labor element discovered this when they attempted to browbeat him into making over his committees so as to let in men whom they wanted in places which he had selected for others. They were reminded of it once more when they ran a candidate against him in his home district. The insurgents discovered it when they threatened to drive him out of the Speaker's chair in mid-session. The Senators learned it when they opposed his effort to give the House its rightful share in legislation, because it meant a shortage in the "pork-barrel," at which they had been helping themselves without stint for so many years.

Cannon is not an elegant man. His ever-present tip-tilted cigar is sufficient evidence of that, to say nothing of his variegated vocabulary of denunciation. When a book-agent lured him into the purchase of a set of volumes which turned out, on examination, absurdly poor stuff, he wrote out his check to the order of the publishers, but endorsed it: "This check for $150 is in full settlement, both legal and moral, for an edition of '—— ——,' which is not worth a single damn. We are never too old to learn, and the way your gentlemanly agent came it over your Uncle Joseph was well worth the money."

Next to Thomas B. Reed, no man who has ever filled the Speaker's chair has been so active in trying to reduce the waste of time in the House. Once the Invalid Pensions Committee turned in its usual crop of some hundreds of bills, most of them with favorable and unanimous reports, and the House accepted them in committee of the whole. If, in the regular session, they had been put through the usual process of reading every one by title and voting on it separately, they would have consumed an indefinite period for mere form's sake. Cannon cut the matter short by proposing that, by unanimous consent, the House vote on them in a bunch. This was done, and in hardly more time than it takes to tell the story they had gone into the record as passed. The incident scandalized the strict constructionists, but saved hours of time, which the House was able to devote to other business, and the result was precisely the same. On another occasion, after he had nearly splintered the top of his desk in trying to pound the House into good order with his gavel, he handed the book of House rules to the clerk, and had the passage about etiquette read aloud. Members who had paid no attention to the gavel suddenly "took notice" when they discovered that they were violating the solemn rules of the House, and were individually liable to punishment.

Cannon, who began life as a Quaker, and was read out of meeting because he persisted in marrying the girl of his choice, in spite of her not belonging to the same body, has lived to help bury the elders who condemned him for his non-conformity. He is about eighty years old now, and expects to live to be a hundred. He was asked once for his rules of living, and these were what he cited in response:

"Honor thy father and thy mother.

"Take no thought of the morrow; don't worry.

"Work, work, work, with hands, legs, feet, and brain.

"Learn to sing, no matter how miserably.

"Sing and laugh and be happy; and keep on, and keep a-keeping on." TATTLER.

Book Notes and Byways

NOTES ON SOME EARLY AMERICAN NOVELS.

A recent study of the development of American fiction before Cooper's "Precaution" has brought to light some facts which are not to be found in the careful records of Mr. Wegelin ("Early American Fiction," rev. ed. 1913) and Miss Loshe ("The Early American Novel," 1907), but which are yet of interest to the bibliographer of the period.

For instance, both these authorities seem to ascribe to an anonymous American author the piece issued, in 1797 at Hartford and in 1798 at Northampton, as "Cynthia, with the tragical account of the unfortunate loves of Almerin and Desdemona." As a matter of fact, the "Term Catalogues" show that this work had been published in London as early as May, 1687, as *"Cynthia;* with the Tragical account of the unfortunate Loves of *Almerin* and *Desdemona.* A Novel. Illustrated with variety of the Chances of Fortune; moraliz'd with many useful Observations drawn from thence, whereby the Reader may reap both Pleasure and Profit. Done by an English Hand." A sixth edition appeared at London in 1715; in 1740 Benjamin Franklin advertised the romance in the *Pennsylvania Gazette* as for sale at his shop (Miss E. C. Cook, "Literary Influences in Colonial Newspapers 1704-1750," 1912, p. 115).

In 1804 J. Gales, printer to the State of North Carolina, issued at Raleigh a novel called "Matilda Berkely, or, Family Anecdotes; By the Author of the History of Lady Emma Melcombe and Her Family, &c." The scene is laid in England and in Russia, and the contents show no special American qualities. No search has identified the author, but in July, 1806, a "letter from a gentleman at Raleigh, N. C.," to the *Monthly Anthology and Boston Review* (Vol. III, p. 356) declared that among the original works produced in North Carolina must be included "Matilda Berkley, a novel. About upon a level with the Massachusetts novel of the Coquette, or Eliza Wharton. Published by J. Gales in 1804." Writing so soon after the appearance

of the book, the "gentleman at Raleigh" may be assumed, at least reasonably, to have known that the book was, as he seems to declare, a native production.

"Ira and Isabella: or the Natural Children. A Novel, founded in fiction. A Posthumous Work. By the late William H. Brown, of Boston," Boston, 1807, seems not to have been seen by either Miss Loshe or Mr. Wegelin. The book itself is unimportant, a tale of two lovers separated by the wrong belief that they are brother and sister, but finally united. It has some interest as being by a writer to whom the first American novel, "The Power of Sympathy," has been, not very convincingly, ascribed. But the chief interest lies in the preface, which comments on the fiction of the day. Brown confesses, ironically, that he has a poor invention, laments *"the want of* machinery *in modern novels,"* and grieves *"for the extinction of the* eastern manner," that is, the Oriental fashion which was going, he seems to think, out of vogue. "I have taken for my own use and behoof, a style peculiar to myself." He calls it *"the* COMPOSITE *style, as it partakes of the English* relation, *and the French* dialogue. *To bring about this end requires a novelty: That the character be so strongly designated that the reader may know who is the speaker, not only by the insertion of* said he *and* said she, *but,* in some small degree, *by the uniformity of the speaker's sentiments."* Modern novelists, he goes on, *"have endeavoured with bold attempt to make a* verbal *distinction of character . . . which is a difference known only by provincial accent; false English; favourite words; idiomatical barbarity; vernacular vulgarity; insipid tautaulogy; discordant technicals; disgusting prophanity; domestic prejudices, or foreign unintelligibility."* He thinks all will agree of novels "that the foundation of these elegant fabricks is laid in the passion of love. *I except the wonderful history of Robinson Crusoe."* He decides that *"to allure the untutored mind to the practice of virtue by an example which is rewarded, and to deter it from vice by the representation of its misery, are means often found adequate to win vivacity to the side of prudence, and fix sensibility in the cause of discretion. Thus far I am the friend of novels, and thus far I am a novelist."* He then draws up a "SCALE OF NOVELISTS," in which he estimates the novelists then most popular on a scale of twenty under each of seven heads. The table is worth reprinting as an indication of contemporary taste; it speaks for itself:

Authors:	Genius	Satire	Knowledge	Taste. Intellig.	Taste. Imagin.	Style	Pathos
Cervantes	19	19	17	16	18	15	13
Rabelais	15	18	17	15	13	10	7
Le Sage	14	17	12	12	14	11	6

CARL VAN DOREN.

Academic Freedom

CHANGES IN THE STATUS OF THE TEACHING BODY OF THE UNIVERSITY OF PENNSYLVANIA—A PLEASANT SEQUEL TO THE SCOTT NEARING CASE.

By OSWALD GARRISON VILLARD.

The dismissal of Assistant Prof. Scott Nearing, of the University of Pennsylvania, which so profoundly stirred the academic world last summer, has had most important results that will certainly be as widely acclaimed as the dismissal was criticised. By a sweeping resolution unanimously adopted by the Board of Trustees at a meeting held at Philadelphia on Monday last, the status of the entire teaching body of the University has been reorganized, while assurances have been given that no teacher shall be dropped by the Board except after the case has been passed upon by a committee of nine, representing each one of the faculties, which shall sit in the case in direct personal contact with a similar committee of the trustees. Moreover, the terms of assistant professors are lengthened to three and five years, and assurances are given that no professor shall be dropped without a year's warning, while instructors holding yearly appointments shall have notice on April 1 if their appointments are to be terminated or renewed. It will be remembered that Professor Nearing's term lasted but one year, and that he was not notified of his being dropped until the end of the academic year.

The following amendments were on Monday substituted for the present sections of the statutes of the University of Pennsylvania governing the appointments, promotion, and dismissal of members of the teaching force:

(1.) There shall be four grades in the teaching staff: (1) professor, (2) assistant professor, (3) instructor, (4) assistant.

(2.) Before any reappointments or promotions of members of the teaching staff shall be made, the trustees shall request the group of instruction of which the appointee is, or is to become, a member, to make recommendation. The recommendation shall be given careful consideration by the trustees, and, if approved by the Provost and the Board of Trustees, shall be followed. In the event of the non-approval of any such recommendation, or in the event that no recommendation shall be made, the Provost and the Board of Trustees shall proceed to make such reappointments or promotions as their judgment approves. In all cases in which the Board of Trustees shall feel it to the interest of the University, they shall in like manner request the advice of the proper group of instruction in reference to original appointments. In exceptional cases, where loss to the University of the services of a man of recognized ability might follow delay in his appointment, the same may be made by the Provost and Board of Trustees without prior consultation with or recommendation of the group of instruction of which he would become a member.

(3.) A professor shall be appointed for an indefinite term.

(4.) An assistant professor shall receive a first appointment for a term of three years. Subsequent reappointments shall be for the term of five years each.

(5.) Instructors and assistants shall be appointed for a term of one year.

(6.) The foregoing appointments shall respectively cease at the expiration of the several terms mentioned, unless notice of renewal shall have been given in writing by the Provost, in case of instructors and assistants not later than the first day of April preceding the expiration of the academic year for which the appointment was made, and in the case of an assistant professor at least one academic year before the expiration of the term for which the appointment or reappointment was made. In the event of a decision by the trustees not to continue the appointment or reappointment of an assistant professor, or to remove a professor or assistant professor, as hereinafter provided in paragraph 7, leave of absence may be given to such professor or assistant professor by the trustees for one year, with full salary. All appointees are subject to the regulation covering the retiring age.

(7.) A professor or an assistant professor shall be removed by the Board of Trustees only after a conference between a committee, consisting of one representative from each of the faculties in the University (such representative being chosen by the faculty of which the representative is a member), and a committee of equal number from the Board of Trustees, at which conference the Provost shall preside, and upon a report from such conference to the Board of Trustees for consideration and action by them.

(8.) Resolved, That the Provost be, and he is hereby, requested to communicate the foregoing amendment to the statutes to all members of the teaching staff.

While it is too much to say, as does one enthusiastic trustee of the University, that this establishes academic freedom throughout the entire American college world, it does mean a remarkable advance which will powerfully affect not only the University of Pennsylvania, but all our colleges and universities, for it establishes, by the voluntary act of the trustees of one of our foremost universities, the principle that the teaching force has a right to be heard in case of the dismissal of one of its members. Certainly it will be much more difficult hereafter for any reactionary or corporation-controlled Board, or one that is merely mistaken, to strike a blow at academic freedom. Thus, out of the evil of Professor Nearing's dismissal has come much good, with more to follow. Although this does not restore him to his position (he has profited enormously in prestige, being in great demand as a lecturer, besides having obtained an excellent position in Toledo), it does virtually render impossible a repetition of the mistakes committed by the Board of Trustees of the University of Pennsylvania; a man must needs be but a poor servant of academic ideals if he would not gladly be a martyr in such fashion, and thereby advance the cause.

More than that, it is to be assumed that hereafter there will be closer consultation between the appointing power and the pro-

fessors of a given department as to original appointments. If it is true that the worst evil confronting our universities is not the improper removal of competent teachers, but the inability to remove the many teachers who, as Professor MacDonald put it in the *Nation* recently, are "neither sound scholars nor respectable teachers," greater care in the selection of men is certainly a prerequisite to a better state of affairs, and there is now indubitable evidence that the trustees of Pennsylvania propose to exercise great care in that respect hereafter. This will promptly prove or disprove their willingness to give the opportunity to instruct students to men who do not take the accepted view of social conditions and will test their assertion, which I, for one, after a careful study of the Scott Nearing case on the spot, am ready to accept, that the motive of a *majority* of the Board was not to discipline Professor Nearing for tilting at the social order, but to drop him for vagaries of speech—in either case, it was a mistake in the manner of its coming to pass.

As for the change in tenure of office that has now been safeguarded in the University of Pennsylvania, the Board has now frankly admitted its fault in the Nearing case by providing that notice of discharge shall go to the person dropped, not on June 15, but on April 1, while assistant professors shall have a whole year's notice. If, therefore, the University of Pennsylvania should hereafter be able to pay its teachers adequately, it would seem as if the American Association of University Professors would have little to ask of this University, for the bugbear of Presidential usurpation is not menacing at Pennsylvania, whose Board of Trustees, through its committees and as a whole, exercises executive supervision to a remarkable degree—as trustees go.

But the reforms planned by the Pennsylvania Board of Trustees are not going to stop there. It is understood that a far-reaching change in the method of selecting trustees is also under consideration, and will probably be acted upon at an early date. Up to this time, as required by the charter, the Board has made all appointments for life, or until voluntary retirement, and it has been the custom of the Board to ask the directors of the General Alumni Society for nominations to fill a vacancy, they having received the right to offer four names from which one was chosen by the Board. If, however, none of them was acceptable to the trustees, four other names could then be proposed by the General Alumni Society, and so on until the vacancy was filled. The objection to this system was that the alumni could not obtain the election to the Board of Trustees of an alumnus not acceptable to the Board, but acceptable to the alumni. It was asserted that this had the appearance of doing something to gratify the alumni, "while preserving intact the self-perpetuating power of the Board of Trustees." And the General Alumni Society was itself criticised, partly because it was a comparatively small body, and partly because it was said to be too much under the influence of the Board of Trustees, its officers being too much from the same social group. It is now proposed, and the matter is under discussion by a committee of the Board of Trustees, to change the relationship of the alumni to the Board, somewhat along the following lines:

On the occasion of every vacancy hereafter among the twenty-four members composing the Board, the trustees shall advise the Board of Managers of the General Alumni Society, or any other agency of the alumni which may be created, and shall invite this agency to submit not less than six names of persons, preferably alumni, from whom three persons shall be chosen by the Board of Trustees as candidates. Instead of stopping here as in the past, and picking a nomination made purely by the Board of Managers of the General Alumni Society without any vote being taken thereon, the alumni will now be asked to vote upon the three candidates by written ballot, to be mailed to the Alumni Society. The Board of Trustees shall then, if the plan goes through as indicated, elect to membership the candidate who shall receive the highest number of votes, provided that at least one thousand votes shall have been cast. Should this number of votes not be registered because of indifference on the part of the alumni, the Board of Trustees will reserve the right to disregard the result of the election, and in the event of a tie the trustees will also decide. It will undoubtedly be stipulated that the rights of the trustees as expressed in the charter shall in no wise be abrogated or impaired by the statute.

While this does not liberalize the election of trustees to the extent that the Harvard election of Overseers is thrown open to the alumni—which the charter would probably prevent—it is obviously a great step forward, and provides the means by which the Board can in time be varied in its membership. Most of the trustees today, in fact almost all, are Philadelphia men, but if the alumni take sufficient interest it is quite possible that men living in New York and elsewhere will find their way to the Board.

While these changes have indubitably been precipitated by the storm of criticism that burst over the heads of the trustees, it is but just to say that several of the leading spirits of the Board, notably its devoted chairman, Mr. Effingham B. Morris, have had them under consideration for some time—long before the advent of the Nearing case. They see clearly now that if they had had the approval of nine professors acting in a representative capacity for their action as to Scott Nearing, the outcry against them which they think so unjust could not have occurred. But whatever the cause, it is pleasant to record that the Board has not been deterred from doing what is right now by fear of its being alleged that it was driven into it—which makes up for a good deal of blundering of last June.

Literature

THE SECRET MEMOIRS OF AN ORIENTAL DIPLOMATIST.

The Secret Memoirs of Count Tadasu Hayashi. Edited by A. M. Pooley. New York: G. P. Putnam's Sons. $2.50 net.

Whatever throws light upon a political transaction so fraught with world-wide import as the Anglo-Japanese Alliance of thirteen years ago, and upon the man chiefly responsible for it, deserves immediate and careful attention. It will go down to posterity associated with the name of Count Hayashi, for seven years the representative of Japan at the Court of St. James's, and the first to enjoy the rank of Ambassador. In the "Secret Memoirs" (Chap. III) he states that he arrived at a time when "England was tired of war, that in South Africa having just been concluded." But although Pretoria was occupied in June of 1900, the treaty of peace was not signed until two years thereafter; and the editor makes the necessary correction in a foot-note. The Boxer troubles in China were causing much anxiety just then, and the British Government was grateful to Japan for the prompt manner in which she dispatched troops to Peking. The whole conduct of this expedition, the behavior of the troops, the moderation shown in the diplomatic transactions which followed, were particularly creditable to the island empire, and Hayashi deservedly received much of the credit. At this period Japanese statesmen were divided into two parties: those who were pro-British and those who favored a Russian alliance. The naval men, who came mostly from the island of Kyushu, were pro-British, while Ito and the Choshu military party preferred to make friendly overtures to St. Petershurg. Hayashi, a native of Yedo (Tokyo), and son of a physician attached to the court of the Shogun, belonged to neither faction; but, as it happened, his training had been English.

He was one of fourteen youths sent to London at the very close of the Shogunate Government to receive a European education, and entered University College in the summer of 1867. Shortly afterwards, however, he, with his fellows, was hurriedly recalled, and in the revolutionary struggles which followed he drew his sword on the losing side of his old master, the Shogun. After a short imprisonment, he was released, and was soon in the way of promotion. He was attached as interpreter to the notable Iwakura mission of the year 1871, which visited the chief countries of Europe and America and reported on foreign methods of life and government; as a decade later he was to be attached to the Ito mission which gave Japan her attack of "German measles." Mr. Pooley, in his biographical sketch, fails to mention this second opportunity Hayashi enjoyed of seeing the world of politics at close quarters. The writer of this article

remembers how carefully he summed up in conversation the various impressions made upon him in this later mission. Of all the countries they visited, Portugal struck him as the least satisfactory.

The visit to London, so summarily cut short in 1867, was not to be his last. Within a few years he was in the diplomatic service, attached to the London Embassy. The experience he received was to be of the greatest value to him in his future career. He became a thorough critic of governmental methods, with a keen sense of the honor involved in treaty keeping or breaking; restive under militarism, and an ardent believer in press publicity. To this fact we owe the publication of these "Secret Memoirs" which profoundly disgusted the Tokyo Government, as telling tales out of school. Mr. Pooley's narrative of the capture of the burked manuscript makes good reading (pp. 29-36).

In one of the valuable "Notes" inserted in the "Memoirs" (close of Chap. VII), there is a significant passage dealing with the status of Japanese Cabinets. It helps to explain the charges of bad faith brought against Hayashi, who was personally the most honorable of men, with high ideals of political morality:

> The mistake which Count Hayashi seems to have made was in thinking that, because the Saionji Cabinet was in power, it was, therefore, going to govern the country. The policies of Japan are made by the Genro (Council of Elder Statesmen) and merely executed by the Ministry for the time being. With a majority of the Genro belonging to the militarist faction, it is easy to realize the difficult position in which a Minister bent on curbing the ambitions of the army would find himself.

Ever since the revolution of 1868, which was brought about by leaders of the Satsuma and Choshu clans, Japan has been ruled by an oligarchy, known as the Sat-Cho clique, who believe in settling things by the sword. The refusal of the Japanese Government in 1876 to decide the Korean question at that time by force of arms is held to have been the controlling motive for the ill-advised Satsuma rebellion, when the heroic Saigo met his death. From the outset Hayashi was an official in the confidence of the Sat-Cho clique, but not one of them. He deplored the frequent arrogance of the army. In the chapter on Foreign Policy (p. 264), he gives expression to this dislike: "Generally speaking, soldiers who have won battles have done so by making sacrifices, even of what they value most in the world—their own lives. Naturally, they want to gain fame, they want to appropriate, as a result of victory and risk, as many privileges as possible to crown their success in arms. . . . It is easy to imagine how boastful and aggressive our soldiers were after the Russo-Japanese War. By what they did there after the war we lost not only the good-will of the Chinese, but have also won the adverse criticism of Europeans and Americans." As the editor of the "Memoirs" intimates, he would have deeply regretted the recent aggressive policy of his Government, which in the period since his lamented death has converted simmering dislike into furious hatred. It is noticeable that hatred of Japan seems now to be the prevailing topic in Chinese magazines published in this country, and it is a new development. "The principal point on which the late Cabinet was attacked," remarks the Count at page 256, "was that we had spent in Manchuria several hundred millions of *yen* [dollars] and 100,000 lives in order to win our rights and privileges in that country. We ought not, therefore, to be slack in our policy in Manchuria. We ought still to extend further the rights which we have acquired and to strengthen the foundations of our position there, but on no account are we to make China our enemy. The object of Japan ought to be to maintain the peace of the Orient and obtain Chinese goodwill and trust."

That Hayashi, as Foreign Minister in the Saionji Cabinet, started out with an honest desire to follow the policy of the "Open Door" in China and respect her independence and integrity, may be conceded; but he was compelled to drift from his moorings and to take up the other policy of "spheres of influence." It is the bitter complaint of the Chinese vernacular press that the constant reiteration on the part of Japan and other Powers that they intend to respect the independence and integrity of China is meaningless verbiage. "Whatever has been leased by the Chinese Government," remarked the *Nang Fang Pao* some years ago (p. 221), "is now almost invested with the rights of occupation, and whatever has not been leased, but is bordering on the leased territory, is in danger of being enclosed in the same." Modern militarism is, in the last issue, immoral and unscrupulous; and it is pitiable to note how a scholar and a gentleman like Hayashi, a man who under representative institutions would have been a pillar of strength and a model of consistency, saw his good name compromised and his cherished policies thwarted and nullified by pressure from a military clique. It is to his bitter disappointment and disgust that we owe the publication of the "Secret Memoirs," which in a free country like our own would have taken the form of platform speeches or invectives on the floor of Congress.

The editor, though generally sympathetic, is not always happy in the treatment of his subject. He credits the Count with an inadequate knowledge of America, where he himself may be at fault: "It is significant that the only serious error he made during his whole career was in connection with the one country he had never visited." Now, as a member of the Iwakura mission, he must have visited America in 1871; and what about the later Ito mission? Moreover, Mr. Pooley fails to show that Hayashi made any such blunder in his handling of American questions. He was hand-and-glove with Fukuzawa, editor of the *Jiji Shimpo*, the medium through which from time to time he gave anonymous publicity to his cherished opinions. This great publicist was founder of the Keio University, which for the past quarter of a century has had on its staff able American graduates, one of whom is now our Minister to Greece. Nowhere in the Japanese Empire is there a journal in fuller touch with American policy and ideals than the *Jiji Shimpo*. Mr. Pooley believes that Hayashi, when Minister of Foreign Affairs in 1907, played a fast-and-loose game with this country. Viscount Aoki was then Japanese Minister at Washington; married, by the way, to a German lady, and very German in his sympathies. "Both Aoki and Hayashi," says Mr. Pooley (p. 19), "recognized that China was the crux of the difficulty between Japan and America. Aoki realized that if the problem of China were settled, Japan would be able to maintain her credit at Washington, for the school and immigration affairs were local difficulties on which it was uncertain even that Japan was in the right. Hayashi tried to shut out America from China by raising difficulties for her nearer home. He failed to realize that the Americans are a hard-headed business race, with a strong undercurrent of sentimentality. To their remonstrances with regard to Manchuria, he retorted by raising the school question. They came back with the immigration trouble, and Hayashi found that he had slung a boomerang, which returned in double-quick time, bringing with it the whole of the credit which Japan had so carefully amassed in the States during fifty years past.

"In a few months he killed the long-established friendship between America and Japan, and in place has been substituted on the one side an openly expressed dislike and suspicion, and on the other a swelling hatred, which is only kept within manageable bounds by official repression."

This is pure moonshine. Hayashi played no such political game, nor can the anti-Japanese agitation in America he explained in this way. His disagreement with Aoki, which resulted in the recall of the latter, was of a technical nature, a breach of diplomatic etiquette, and Princes Ito and Katsura agreed with Hayashi in his disapproval. The matter may be allowed to stand as explained by Hayashi in the eighth chapter of the "Memoirs." Aoki's attempt on his own initiative to patch up an agreement with this country, which should contain no account whatever of the immigration problem, was tactless and impossible. Hayashi states (p. 251) that the three questions between Japan and America in 1908 were "the immigration question, the school question, and the problem of China." He was right in placing the immigration question first. The anti-Japanese movement in this country began in the spring of 1905 with a hot newspaper campaign in San Francisco, followed by the organization in May of that year of the Asiatic Exclusion League. It was a burning question long before the private diplomatic difference between Hayashi and Aoki, which occurred late in the year 1907.

The close of the Aoki-Hayashi quarrel is

interesting. After his recall the Viscount is said to have succeeded in excluding his rival from the Privy Council, a seat that was his due because of his great services to the nation. The other alleged reason for his exclusion was that he had become a Free Mason during his stay in London.

Mr. Pooley is hardly a safe guide to follow in these international matters. He credits the Japanese with an "innate contempt, a burning detestation for all white men," beside which the "vicious deep-seated contempt" that exists between Chinese and Japanese sinks into a vanishing quantity. Many who know the Japanese best might be ready to reverse, and then modify, the statement. His acquaintance with the Japanese public is probably limited to the gusty and prejudiced mob of the capital, led by disgruntled *soshi*—"political bullies." Count Hayashi has a significant paragraph (Chap. VII, p. 226) on this topic:

> The public in Japan is rather cool in its interest in foreign affairs, indeed I could almost say it is indifferent. When, however, something happens that forces the public to pay some attention to foreign affairs, then at once the public seems to get intoxicated, as though drunk with alcohol, and it behaves as if it were not able to discriminate, just as an intoxicated man cannot tell the difference between *sake* (rice beer) and water.

In many respects the most interesting pages in the "Memoirs" are to bo found at the close of the first chapter, where the Count tells how German diplomatic clumsiness wounded Japanese sensitiveness at its most delicate point. After the signature of the Treaty of Shimonoseki in 1895, which concluded the war between China and Japan, tho Japanese were greatly surprised when Germany suddenly took common action with France and Russia in compelling Japan to surrender Port Arthur. They could understand the intervention of Russia and France, but why should Germany push in? Great Britain had refused the invitation of Russia to join in the intervention, on the ground that such an act would be contrary to the established principles of international relationship, and the reason appliod quite as strongly to Germany. But not only did Germany send a separate note, in addition to the joint note of Russia and France, but she inserted therein a blunt threat of possible resort to arms. Here is the story in Hayashi's own words (p. 83):

> The same day [April 23] the German Minister [Baron von Gutschmid] called [at the Foreign Office, where Hayashi was Acting Minister], but later in the afternoon. In spite of a sufficient knowledge of English and French, the German Minister apparently thought it an indignity to draft a memorandum in either of these languages, and in consequence of my inability to understand German, brought me a memorandum written in *romaji* [Japanese written in Roman letters, according to the Japanese phonetics], and caused his secretary, Herr Weipert, to read it out. Now the secretary was extremely well acquainted with the ordinary Japanese script, and was vexed at having to read out an unfamiliar transcript of the original text, which had been composed from Chinese ideographs. It was quite clear that neither the secretary nor the Minister understood a single word of what the former was reading, while I, though paying the deepest attention, was barely able to catch the meaning of the memorandum.
>
> The memorandum which had been left by the French and Russian Ministers was practically a brief sentence advising the retrocession of the territory acquired by the Treaty of Shimonoseki, and giving as a reason for the advice friendship for the neighboring country. The German memorandum, on the other hand, said there was no possibility of Japan being able to hope for a victory in fighting Russia, Germany, and France, and therefore it would be beneficial for Japan if the advice tendered by the three Powers should be accepted.
>
> Standing at the table opposite to the German Minister, I said, "Your Excellency's colleagues, the Ministers of Russia and France, have been here and have given friendly advice for the purpose of maintaining peace, and in doing so they have used a friendly terminology. But your Excellency's memorandum is phrased as if it were the proposal to solve the question by force of arms. If you mean this, then the dignity of the state, as well as the feeling of the nation, must be considered, let alone the words in which the memorandum is couched. It seems as if the memorandum has been couched in the Japanese language, with which you are unfamiliar, and consequently errors have been made in the use of words."
>
> The German Minister, in the most awkward manner, said that the views expressed by me as being in the memorandum were not so meant, and if such views occurred in it, it was due to errors in the wording of the memorandum in Japanese. He promised to cancel the memorandum and asked me to regard the German memorandum as being identical with those of the Russian and French Ministers.

Some of the German papers at the time, remarks Mr. Pooley (p. 54), were curiously prophetic in their expressions of disgust at their Government's policy. "In a struggle with France and Russia," said tho *Neueste Nachrichten*, of Berlin, "Japan would be a very useful ally, and her forces are strong enough to distract from her western frontier a good portion of the Russian armies. At the end of the affair we seriously fear that Germany will pay bitterly for her action, for the Japaneso will eventually seek their revengo."

Whilo giving Hayashi credit for the bringing about of the Anglo-Japanese Alliance in 1902, and its renewal on a broader basis in 1905, "the crown of Hayashi's career," Mr. Pooley regrets that it was ever signed. "I shall bo very much surprised," he doclares towards the close of his Introduction, "if within a few years England does not realize that her money and her support have raised up against us in tho Far East a Power as powerful and as dangerous as Germany has becomo, and ono infinitely more difficult to handlo, on account of her geographical position."

It is a pity that the book lacks an alphabetical index. The editor's English is at times somewhat slovenly; for instance, at page 28, where he complains that "for many years the British and American press have been so slovenly represented in Tokio, and indeed is so to-day." Not so with the "Memoirs," for Hayashi prided himself on his English, and is author of an excellently written novel ("For His People"; Harper, 1903), a faithful picture of pre-Restoration times in Japan. There occur a few blunders in the Introduction. "Masumae" (p. 6) should be *Matsumae*, Kido was never "Marquis" (p. 8), and Hayashi was Secretary, not of "the Industrial Bureau" (p. 9), but of the great Department of Public Works (Kôbusho), abolished in 1886.

CURRENT FICTION.

Moyle Church-Town. By John Trevena. New York: Alfred A. Knopf.

The gloomily romantic John Trevena of Dartmoor's present here becomes the lighthearted and fairly light-footed adventurer in the romance of her past. The scene is laid in the early eighteenth century. England is beginning to drink tea (when sho can afford it) and has not forgotten her fear of witches. The official villain, one of those grinding country lawyers, tyrants, and extortioners who have played such a part in rural fiction, is abjectly superstitious, and much of tho action turns upon this weakness. Among many other victims of Grambla's greed and trickiness has been Squire Clabar of Moyle, who has died ruined and brokenhearted, and whose son has become Grambla's drudge. Against this son, as the story opens, Grambla turns; discharges him from his employ, and turns him out of his cottage. At this moment, however, returns to Moyle Church-Town, after long absenco as a sailor and wanderer, Clabar's supposed son Peter, who is really his daughter Cherry. A baronet in the neighborhood to befriend the father, and two baronet's sons to becomo involved with the disguised daughter, give us abundant and well-seasoned materials for romantic comedy. Cherry, like Rosalind and others too numerous for mention, has roamed the world without harm in her man's garb. She is able to appear either as a strong fellow with a gruff voice or, in the twinkling of an eye, even without shift of raiment, all that is fair and feminine. By taking the trouble to squint a bit, tho reader may easily give the old sievelike convention the air of holding water once more. Having accomplished this feat, he may well enjoy a tale told with far moro skill and gusto than are common to its kind. The baronet designs Cherry's hand (sho is something of an heiress, and he knows the secret of her birth) for his eldest son; but it is tho younger who has won her heart, and, after duo mystifications, she surprises him with her hand. The villain gets his deserts, as all villains must, and Cherry's father (the exiled duke in effect) comes into his own onco more. All this has been done, but who shall say that it does not deservo to be done again and yet again, so long as a story-

teller may be found who can bring a fresh and willing hand to the business?

In Mr. Knox's Country. By E. Œ. Somerville and Martin Ross. New York: Longmans, Green & Co.

We suppose that Miss Somerville and Miss Ross, the two ladies who write of Ireland with so robust humor and so virile pens, are regarded as quite *déclassées* by those of the modern Irish school, who, without Synge's genius, ape Synge's melancholy. It is quite possible that we should be told, if indeed we have not been told already, that these most entertaining ladies who belong properly to the tradition of Lover and Lever are false to the ideals of Ireland and misrepresent the Irish people to make a Saxon holiday. Well, if indeed we shall be thus exhorted, we shall be able to bear it with philosophy, and so, we imagine, will Miss Somerville and Miss Ross. And we shall continue in our phlegmatic Saxon way to hold it as an article of faith that the colors used by these ladies are not less true of Ireland than the sombre tints of Synge's imitators. After all, it doesn't rain every day, even in Ireland.

In the present volume we renew acquaintance with many delightful friends, and chief among them Mr. Flurry Knox, master of hounds, and that shrewd old tartar, his grandmother. We cannot discover the faintest sign of any exhaustion of the fecund imagination that has produced so many stories dealing with the adventures of Major Yeates, R.M., and his neighbors. Indeed, the humor, if anything, seems to romp more riotously through this series of sketches than through its predecessors. "The Comte de Pralines" is an example of the authors' work at its best. The description of the famous run, in which the spurious "Count," Miss McRory, Major Yeates, and a couple of jackasses, enticed to the chase by misguided enthusiasm for the Major's hunter, were the only participants, is one that will be appreciated by any one who has ridden to hounds anywhere: the introduction of the jackasses is a stroke of humor that amounts to genius. The illustrations, for which Miss Somerville is responsible, are, as usual, excellent.

H. R. By Edwin Lefevre. New York: Harper & Bros.

In his inscription the author, after a fashion now in favor, takes the bread out of the mouths of "the critics" by foreseeing that they will presently "point out how completely he has failed to write a Satirical Romance of To-day." Just why the critics are likely to make such a slip is suggested by a passage in the context: "To irritate a reader by compelling him to think in order to understand was, you told me, both unfair and unwise." And if a reader, how much more a critic! However, a reviewer must say something, if it is only what the author expects of him. The truth is, we have no one in America just now who can do the kind of thing Mr. Lefevre attempts. Several Englishmen can do it, and have done it, notably Mr. Bennett in "Hugo" and "Denry the Audacious," and Mr. Wells in "Mr. Polly" and elsewhere. The daring male who breaks loose from convention and timidity and sweeps all before him is a favorite pivot for satirical fantasy. But he must break loose, not be propelled from behind. H. R. is a bank clerk who suddenly receives word from Mr. Lefevre that he is to demonstrate a rebel and a genius. Therefore he beards and browbeats the president of the bank, insults his daughter, and sallies forth to conquer New York. This, by the free play of an effrontery and egotism which, we gather, are upon a scale hitherto unknown in the metropolis, he proceeds to do. The means are such as come to his hand—anything might have served as a fulcrum for this colossal will. As it chances, he collides with a sandwich-man on the street, and gets his idea. Around the sandwich-man he builds a new system of advertising, makes a fortune, wins the banker's daughter, and is understood to be on his way to the White House, or thereabouts. The success of such a book depends upon its spontaneity and easy force. Mr. Lefevre has labored the business. His primary error, for this kind of thing, is an error of which Mr. Bennett or Mr. Wells is incapable—his sprinkling the pages with detached epigrams and clevernesses which irritate the reader without compelling him to think. And they irritate him especially because in the main they are not flashes of true satirical wit, but cheap cynicisms.

The Green Half Moon. By James Francis Dwyer. Chicago: A. C. McClurg & Co.

Judged by the standard Balzac set himself when he wrote the "Comédie Humaine," "The Green Half Moon" has little chance of immortality. "Listening to these people," he said of the creatures of his imagination, "I could espouse their lives, I felt their rags on my back, I walked with my feet in their tattered shoes; their desires, their wants, everything, passed into my soul and my soul passed into theirs; it was the dream of a waking man." "The Green Moon," on the contrary, is a pleasant bit of fiction made out of cardboard, and the people in it sprung into life, not in a garret, where are born "the dreams of a waking man," but in a snug library, where the puppet, pulled with a string, is but too apt to step within the covers of a novel.

A particularly good American man, young and handsome, meets a perfectly beautiful American girl as both are steaming out of Bombay on a fast steamer bound for Arden. They love at first sight; but love is not all beer and skittles for the stricken. Miss Alice Harrington, of Troy, New York, is the companion of Lady Hope Stanger, and to Lady Hope Stanger the British Government, just entered into war with Germany, has confided a most important task which has to do with a mysterious jewel. Mr. Dwyer excites suspicions that he can do better than he has taken the pains to do by the way he hides this jewel. For some really exciting pages we do not know, as the hero does not know, what is contained in a package that Alice, with small feminine insight, has confided to him. Good, pure men are proverbially maladroit, and John Sheridan Warren among simpletons is the chief. He gets the jewel, loses it, gets it again, and loses it, till the reader, out of patience, hopes with all his heart that wicked Zunel, the incendiary Mohammedan, may find it and tuck it away under his green turban. None of the adventures recorded in this book ever took place, but Mr. Dwyer has a certain gift in storytelling. He has the art of putting in details which puzzle the judgment and almost persuade.

The Twisted Skein. By Ralph D. Paine. New York: Charles Scribner's Sons.

Some day somebody will write a story about college life in which the hero is not working his way through Yale by tending furnaces and waiting on table, is not one of the brightest students in the junior class, is not looked upon as a "grind" and accordingly snubbed by his classmates who own automobiles, is not the idol of the elderly maiden ladies with whom he boards, does not get into all sorts of misunderstandings and more trouble because he is constitutionally unable to "tell" on some athlete whom the campus adores (despite a pronounced yellow streak), and does not finally square himself with the whole college, not forgetting the crew coach and his charming young daughter, by "making" the 'varsity crew overnight and pulling it—single-handed, of course—to victory over Harvard in the last pulse-quickening chapter. But that day seems a long way off. Consequently, one finds Karl Truman, the hero of Ralph D. Paine's latest book of undergraduate life, performing in accordance with all the best principles that have guided generations of college heroes to glory on the printed page.

Karl is altogether too good and too hard-working to be more than a nonentity at Yale until he comes to New York as captain of the chess team and defeats Princeton, Harvard, and Columbia. An elderly stranger who has wasted his life making money and accumulating a successful business man's grouch sees the chess champion perform, becomes interested, and determines to "invest" in him. And so, when the captain of the chess team returns to New Haven, it is with a handsome allowance which enables him to blossom out in modish clothes, live in a high-priced dormitory, mingle as an equal with the other students, try for the crew, and enjoy all the things from which his former poverty barred him. But, of course, there are serious complications. He is not suspected of locking a cow in the chapel, but another equally villanous freshman prank is charged up against him; he is arrested, and his backer goes back on him. When all seems lost, save "Yale spirit," the hero brings that useful commodity into play, and, by the time Harvard's colors are lowered on the Thames, there is very little for the other characters to

do but offer apologies and make an enormous fuss over the great No. 7 who won the race for Yale when the stroke-oar failed.

His German Wife. By Douglas Sladen. New York: Brentano's.

The imperturbable tolerance which this English writer affects makes curious reading in time of war. We have no quarrel, he seems to insist, with Germans as Germans, certainly not with any really nice, well-bred Germans, who are after all pretty much like ourselves, only better educated and more conscientious and energetic and habitually efficient in every way. As for the English themselves, page after page of well-considered criticism falls from the lips of the fair, impecunious Baroness Ernestine Frederika Kunigunde Lysnar von Adlerstein, who is modestly sampling insular life as Mrs. Isherwood's lady companion. Again and again to the flower of British youth, in the person of Capt. Renny Isherwood, his unemployed physical magnificence, his superfluous magnanimity, and his general futility, are pointedly brought home by the candid young Baroness. She decides to marry Renny, however, takes him home for a German honeymoon, and, after participating in the English exodus following the declaration of war, manages to have a taste of army-post life in both countries. None of the episodes are of great interest in themselves, the story's real intention being the comparison of German and English types and standards. This is competently and perhaps too chivalrously done—one touch of real malice would have improved the tale immeasurably.

The Obsession of Victoria Gracen. By Grace Livingston Lutz. Philadelphia: J. B. Lippincott.

"The Obsession of Victoria Gracen" has popular qualities and those guaranteed to please its audience. The first few pages are well written, with a faithfulness to reality that is not stereotyped. A funeral party, excited with the morning's happenings and pumped up to a high level of vulgar interest in the recent death and its grewsome details, sits down at a full meal to discuss the future of the orphaned boy who is to live under the roof. Richard is hard, resentful, unattractive, and he bitterly resents the criticisms, frankly uttered in his presence, upon his dead father and mother. That night, out of the blue, comes a message, inviting him to live with a maiden aunt, his father's sister, a woman of wealth and breeding, alienated from Richard's father by the latter's marriage. After this, the literary merits of the book are nil, for the author, like other people, does not thrive in prosperity. But although from a certain standpoint this book is poor reading, it is spectacular, sentimental, and pietistic, and therefore sure to please the thousands to whom the Elsie Books fell as manna from heaven. Cleverness in the management of petty incidents is an asset of which the author makes good use.

COURAGE AND CANT.

Greek Genius and Other Essays. By John Jay Chapman. New York: Moffat, Yard & Co. $1.75 net.

Mr. Chapman is nothing if not courageous. He is so courageous that he is willing, out of confidence in an active and original mind, to write without thinking; with the result that he sometimes says very good things, and sometimes says things which are not good at all. The latest example of his courage is this book of essays, wherein he passes from criticism of Euripides to lack of criticism on Shakespeare and Balzac with the amazing versatility of a plunging horse that has broken from the traces. We are writing in a feeble effort to imitate Mr. Chapman's own breezy manner, and our words may sound a trifle presumptuous, but, as a matter of fact, there is one section of the book so sound in judgment and so timely in point that we are almost ready to forgive the author his glowing indiscretions in other chapters. We refer to Mr. Chapman's diatribe on Sir Gilbert Murray, and we think the rebuke therein administered, though it might perhaps be better if spoken in the language of one gentleman to another, is deserved. Every one in these days has been reading Murray's translations of Euripides and hearing them on the stage; every one admits the brilliancy of these productions, and every competent judge knows that he stands very high as a scholar. But Murray has admittedly used a free hand with his author, and the layman frequently asks just how free he has been and how far this freedom is justified. Now, Mr. Chapman shows by sufficient illustration that Murray not only expands his author in a way and to a degree that are at least surprising, but transfuses into his version a tone of neo-British religiosity and æstheticism that, unfortunately, are not surprising to those familiar with certain tendencies of modern Oxford scholarship. And we think that Mr. Chapman is entirely justified in meting out this severe language to what is really a systematic perversion of the Greek genius:

> The structural nature of a Greek drama is known to every one, and is perfectly well known to Mr. Gilbert Murray; but the fumes from his tripod cover his brain as he writes his translations, and these fumes pervade the introductions and the notes to the poems. The merit of the verse itself is due to this very envelope of steaming inspiration and poetic sentiment. But the waking Murray ought really to join in warning the public against the hymning, dreamy, irresponsible Murray, the poet Murray, who is spreading grotesque ideas about Euripides beneath every shaded lamp in the Anglo-Saxon world.

We know that certain scholarly and honest persons excuse these aberrations on the part of the brilliant Oxford professor on the ground that he is making Greek a live subject to thousands whom it would otherwise never reach at all. The plea is specious, but we are afraid of it; we distrust dishonesty even from Greek professors *dona ferentes.* Another man might be indulged in his ambition to rewrite into modern moods a classical poet, but when the highest authority of the greatest of English universities spreads false notions about his subject, the question of veracity takes another color. He stands as the apostle of Greek; and if Greek has any value for the modern world, it is because the supreme Greek poets presented life in a manner the very opposite of the religiosity and sentimentalism which Sir Gilbert Murray is pouring out of Oxford.

Mr. Chapman can scarcely be reckoned a scholar; he is a David beside the Goliath he attacks; but he has hurled his pebbles well. He might even have gone further, and found in Murray's importation of very recent humanitarian ideas into the origins of Greek epic something of the same betrayal of a great trust. Sir Gilbert has published a manly recantation of the pacifist opinions he held in politics before the present war. We wonder whether it has occurred to him that the sentimentalism of his scholarship is of the same character, and indeed not free from the same perils.

Mr. Chapman, we have said, is courageous; would that he was always wise. "We should read Shakespeare for pleasure, and only for pleasure," he says. "The plays were meant to be gay trifles, the perfume and the suppliance of a minute." Alas, has Sir Gilbert Murray ever written anything as false in regard to Euripides as is this grotesquely exaggerated half-truth about Shakespeare? Mr. Chapman stumbles on an occasional bit of shrewd criticism in the later essays in his volume, but on the whole his tone and manner are lamentable. His contempt for all other critics but himself is not pretty. He writes in a spirit of hysterical exasperation against the "pundits" who have seriously studied an author, and against "the whole cant of criticism." His system is revealed in the command that "we should use no method in dealing with Balzac, but should approach him through accident and chaotically." Will Mr. Chapman understand us when we intimate that his attitude in these essays is about as sad a piece of cant as has come to us in many a long day? It is a pity.

SCIENCE AND SOCIOLOGY.

Introduction to the Study of Sociology. By Edward Cary Hayes. New York: D. Appleton & Co. $2.50 net.

It is just as well to realize that, in the recent past, the opinion of the genuine scientist on most sociological works has been adverse; and that a gathering weight of disapproval has given sociology a bad name—has, in fact, distinctly put it on the defensive. What has it done to deserve the name of a science? Every new book on sociology, especially every general treatise, must meet this skeptical attitude; an attitude which is entirely justified.

What is it that has created this distrust of sociology, since Spencer? It seems fair to use that last qualifying phrase, for the great contemporaries of Spencer certainly

did not feel towards his work as later scientists have felt towards that of his successors. Sociology teems with wearisome commonplaces, says one critic; it is full of wild theory and guesswork, objects another. It is emotional; full of snap judgments; not objective; cannot define its terms; misinterprets its evidence, when it offers any; is sensational; stresses the obvious; goes in for therapeutics in advance of heuristics; is approached from selected points of view; is metaphysical, juggling concepts and theories and ignoring facts; has a propensity for petty or large-scale thievery from the legitimate sciences; is, withal, feebly aspiring, pretending to be the "science of sciences" (like philosophy), though it demands little real training in its votaries, has no rigor of method, and doesn't get anywhere. It is so new and raw, commented one scientist, that any crank can fasten on it from any angle. Worse things than these have been said of it.

The book under review is not likely to better this reputation of sociology among scientists. The treatment spreads, often very thinly, over wide and lonely ranges. But no panorama or perspective emerges; no new "world view," which the author, in his introduction, says we need. Part I, on the "Causes which Affect the Life of Society," begins auspiciously with the geographical controls, and lists a number of the most obvious of them. But there is no adequate clarification of the relative importance and limitations of this set of causes. Then we proceed to the technic controls, and enter upon a consideration of a set of topics beginning with rural and urban conditions. Here the treatment periodically deserts the strictly scientific field to exercise the therapeutic function. Moral judgments abound. "Sociology cannot be non-ethical without being unscientific. Private property has been sacred, but general welfare has not. This must be reversed." (Come, let us make objects fall upward!) Opinions here are commendable, but tentative. "The talk about 'busting the trusts,' of which so much has been heard, is probably folly." There are also a number of things we "ought" to do: "Society should conspire to cheer old age by its manners and its spirit of kindness and deference." "There ought to be government employment agencies with announcement of openings displayed in every post office."

It is elsewhere remarked that "the evil of unemployment of the employable is likely to be great when times are hard, building operations suspended, and factories closed or running half time." The directors of labor should note, however, that "it is good economy for private employers to push on repairs and extensions in slack times." Then, we take it, they will be all ready for the good times, if they come; and if they do not come, at least labor will have been employed and paid for. In any case, "there ought to be abundant and free opportunity for unmarried women to secure adequate profitable employment." And we should also note that certain of our casual practices are a "shame" to us. In regard to vagrants, for example, the proper treatment "often requires communication, perhaps by telephone, with the cities from which they profess to come, or to which they say they wish to go. To some of these men it is possible to give important help, and to these it would have been a shame to give merely a 'hand-out' at the door."

Psychophysical causes also affect the life of society, and so do social causes. Eugenics comes in here. "There is no reason why eugenic fitness may not be included in love's ideal." Again, laboring through the issues of immigration, we are advised that "the spirit that expresses itself in the epithets 'Sheeny,' 'Dago,' 'Hunky,' and 'Mick' is not the one that promises fulfilment of the best possibilities of Americanism." A solemn warning! Let us get together and pass a little resolution against naughty human nature. We do not quote all this to amuse ourselves, or any one else. We do it with deep regret. But is this sort of thing science or is it a sermon?

After we have learned about these various causes that affect the life of society, "we have now provided ourselves with the clues that must be used in explaining social realities, and it is time for us to fix attention upon those realities themselves which we wish to explain." So we proceed to consider the Nature and Analysis of the Life of Society, Social Evolution, and Social Control. Taken by itself, there is a good deal that is of value in this latter part of the book. The Examples of Social Evolution are well put together. Apparently, the author would like to go back on the course of evolution, in the case of trial by jury, and approximate the form which it superseded. A final section on Education contains much good sense.

But the impression left by the volume as a whole is not one of orderliness and sequence, nor yet of distinction. It would be hard to say what is the dominant idea or ideas. As the reader tries to sum up the whole, and asks himself: "What does sociology mean to this writer?" he cannot answer. "In sociology nothing is all-important because many things are all-important; that is, here, as in every organic correlation of realities, the ruin of one may ruin all, and by the same token the presence of all is essential to the worth of any." However, at the very end of the book occurs a sentence that seems to state the purpose of sociology: "To the student of sociology it is an impressive fact that with Jesus the sole test of discipleship was *service* in obedience to the purpose to bring in throughout the world and in each particular situation the Kingdom of Human Fulfillment, in which God's will should be accomplished upon earth and the coming of which his followers are bidden to make the first of all their prayers."

Though excellent pages and passages or even sections can be picked out of this book, it fails in the face of the attitude, now becoming traditional among true scientists, towards sociology. It is too inclusive; it mixes together too many things; it does not show rigor of method or a sure hand. Nor will it do for a textbook. Above all things, a textbook must be simple, clear, and with a stride from proposition to proposition. There, if anywhere, is a call for orientation and perspective, a rigid exclusion of the extraneous, problematical, and hortatory. It should construct as far as it can sure-handedly, and stop there. It should deal chiefly in inductions, and least of all balance deductions-from-deductions, or state (with many a "probably" or "possibly") vaguely tentative opinions. And it is the most dangerous sort of thing, from the standpoint of education, to give the student to understand that it is legitimate to draw conclusions from conditions to which you propose at once to apply those conclusions, with the object of betterment. There is, in this book, too little background of historic fact; too little that is calculated to lend distance and detachment to the attitude which any one, let alone a beginner, should take towards contemporary social issues. The young person is to-day too little clear as to what constitutes a right to an opinion on social matters. He seems often to think that his personal "reaction" on a question, that is, the result he gets by measuring things up against his pet prepossessions, is the great be-all and end-all of his education. The sooner he learns that the field of sociology is not an arena or forum where, as one bright lad put it, "one man's opinion is just as good as another's," the better for him and for society.

MAJOR PUTNAM'S REMINISCENCES.

Memories of a Publisher, 1865-1915. By George Haven Putnam. New York: G. P. Putnam's Sons. $2.

This volume, supplementing Major Putnam's "Memories of My Youth," brings down to present days the interesting record of an active and useful life illumined by a fine type of citizenship and civic service, which are best illustrated by his years of labor for the betterment of New York, and his indomitable fight for international copyright. These are set forth in separate chapters of the memoir before us, and they are historical contributions of value, for the group of men with whom Major Putnam consorted, the "mugwumps" of the Cleveland school, is so rapidly passing off the stage that such a record of its point of view as this becomes more and more desirable.

His many friendships, American and international, Major Putnam has also recorded here, notable among them being his characterizations of Grover Cleveland, Carl Schurz, and Theodore Roosevelt, with all of whom his personal relationships were close, Col. Roosevelt having for a time been a special partner in the Putnam firm. Of this connection Major Putnam has the following to say: "He [Mr. Roosevelt] promptly developed a full measure of original theories for the running of a publishing business, theories which were always interesting, but

which in most cases did not appear to be practicable or promising of good results under the existing conditions. . . . I became very fond of the man, although there were times when the prolific suggestions, the exuberance of utterance, and the cockiness of optimism came to be fatiguing." The English experiences of Mr. Putnam are of particular interest at this time, when all eyes are focussed upon that country.

Major Putnam's volume suffers, however, by a rather haphazard arrangement, and it is evident that he has relied too greatly upon his memory in matters of detail. Thus (p. 83), the *Evening Post* was not under the editorial direction of Edwin L. Godkin when Carl Schurz joined its staff in 1881, and his association with it lasted little over a year, and not for some time, as might be deduced from the text. Again (p. 109), Henry Villard was not an Alsatian by birth (which would have made him a Frenchman), but a Rhenish Bavarian. Frederick Billings (p. 108) did not succeed Mr. Villard, but was his predecessor, in the presidency of the Northern Pacific. Mr. Billings is, therefore, unjustly charged with blocking Prof. Raphael Pumpelly's census of the resources of the Northern Pacific region. There are numerous other slips.

FREE TRADE AND PROTECTION.

The Canadian Iron and Steel Industry. By W. J. A. Donald. Boston: Houghton Mifflin Co. $2 net.

The Tin Plate Industry. By D. E. Dunbar. Boston: Houghton Mifflin Co. $1 net.

These books are prize essays in the Hart, Schaffner & Marx series. Both are highly creditable to the series—judicial in tone, painstaking, accurate. They are replete with historical matter, statistics, charts, and, indeed, pretty well all the material needed for the understanding of their respective subjects. They make substantial and valuable contributions to the literature of the controversy on free trade and protection. So much of vague generalization has been put forth in this unending debate that detailed inquiry on the working of particular pieces of legislation is refreshing and welcome. Of the two, Dr. Donald's book is the bulkier, though not for that reason necessarily the better. It gives perhaps a surplusage of material; one does not see the forest for all the trees. Mr. Dunbar's book is more compact and more skilfully put together.

In Dr. Donald's account of the Canadian iron and steel industry the most interesting episode, and indeed the chief episode that suggests questions of principle, is the application of the bounty system by the Canadian Government. The use of bounties for the purposes of protection, in place of import duties, has been commended by writers on protection from the days of Alexander Hamilton on. It is said, and this much in general is true, that they have the advantage of extending aid to a new industry (or an old one, for that matter) without bringing a charge on the consumer of the particular article affected. An import duty makes the price higher to the consumer; but a bounty reimburses the producer for a (supposed) heavy expense and encourages him to go on, without necessarily causing the price to rise. It is not, however, on any such theoretical grounds as these that the bounty system was adopted in Canada. The explanation is to be found, as is so often the case in these devious happenings, in the political exigencies of the moment. The so-called "national system" had been started in Canada by the Conservatives in 1879, and sundry increases of duty had been made during the years following. In 1896 a reaction set in; the Liberals came to power again, and were pledged to a general revision and lowering of duties. The rapidly growing Canadian West was impatient of the burdens of the protective system, and some concessions had to be made to it and to the farming element in general. On the other hand, the interested manufacturers of iron and steel and their constituencies were clamorously opposed to a reduction of duties, and indeed asked for more protection. The Liberal Government compromised (1897) by continuing some duties at a lower rate, and by developing a far-reaching system of bounties on iron and steel products. The beginnings of the bounty system, it is true, reached back ten years earlier, to 1883; but its application on a large scale did not come until 1897. The sums that were finally paid out in bounties reached dimensions that would discompose even our plethoric Treasury, and for Canada threatened to be portentous. From a million and a half to two millions were paid out annually during the later years of the system, from 1904 until 1911.

It was these very payments which finally brought the system to an end. The opponents of protection have always maintained that if the thing must be done, it had better be by bounties than by duties, since the direct payment of money out of the Treasury makes plain to every one what is going on, whereas the concealment of the effect of import duties makes it possible to keep these up for an indefinite time. So it proved in Canada. When a couple of millions came to be paid out each year to the iron and steel producers, the system became untenable. Notwithstanding endeavors of the politicians and the interested producers to keep it up, it was finally abolished in 1906. The payments were continued for a few years thereafter, on a decreasing scale, but the end came in 1911.

From another point of view bounties may fairly be said to be preferable to duties. The argument for protection to young industries, the most respectable of the arguments in favor of protection, is applicable to a bounty system better than to one of protective import duties; and this for the very reason that bounties are not likely to last indefinitely. Protection to young industries implies that the protection will be withdrawn when the industry is no longer young. The universal experience with duties, however, is that the domestic producers clamor for their indefinite retention, and usually succeed in securing their retention long after the industry has ceased to be young. Bounties, however, are always on the defensive; they are never likely to last long, and are pretty certain to be bowled over unless a very strong case for upholding them can be made out.

On the Canadian episode Dr. Donald's conclusion is that even on the ground of young industries the iron and steel bounties cannot be proved defensible. He presents evidence almost conclusive to show that the enterprises which got the benefit of the bounty would have started up anyhow, and that even their inception was hardly hastened. Not only this; the bounty system, so far from leading to progress and improvement, seems to have retarded it. It was the abolition of the bounties which stimulated technical progress in the one great enterprise, the Dominion Steel Company, which got the greatest share of the largess.

Mr. Dunbar's book on the Tin Plate Industry is based upon wide observation both in this country and in England, and shows a more intimate knowledge of the conditions in both countries than is ordinarily to be found in books of this sort. The extraordinary and dramatic development of the tin-plate manufacture under the McKinley duty of 1890 is carefully traced, and it is pointed out that the general revolution in the steel trade which was wrought in the decade following (1890-1900) accounts for the unexpected success of the McKinley protection. Then followed the no less spectacular episode of the Tin Plate Trust, its speculative manipulations, its squeezing of the consumers, and its final absorption by the Steel Corporation. The later development of the industry, largely but by no means exclusively at the hands of the Steel Corporation, has received much less attention from other writers, and on this phase Mr. Dunbar makes new and interesting contributions. He points out that improvements in method have followed one another rapidly in the American plants—both the independent plants and those in the Trust—and that in recent years the American industry, so far from having anything to learn from the Welsh, has taken the lead and can give instruction to its previous rival and superior. In this development there appears to be some ground for asserting that protection to young industries has been successfully applied; the American product has become as cheap as the Welsh, if not cheaper. And by the same token, there is excellent ground for saying that the duty might now be removed once for all. The truth seems to be that where protection is applied so widely and indiscriminately as it has been in the United States during the last fifty years, there can hardly fail to be some successes. If you fire off shots enough, you can hardly fail to make some hits. In this tin-plate case there seems to have been a lucky hit.

Notes

The Oxford University Press announces the publication of "The Unity of Western Civilization," a volume of essays collected and edited by F. S. Marvin.

Harper & Brothers announce for immediate publication "Over the Front in an Aeroplane," by Ralph Pulitzer.

Charles Scribner's Sons announce for publication this month "The Book of the Homeless," edited by Edith Wharton.

"Buddhist Art in Its Relation to Buddhist Ideals," by M. Anesaki, has been published by Houghton Mifflin Co., in conjunction with the Museum of Fine Arts, Boston.

The "Proceedings of the First Librarians' Convention," which was held in New York on September 15, 1853, has been republished in a limited edition by The Torch Press, Cedar Rapids, Iowa.

Doubleday, Page & Co. announce the forthcoming publication of "Booker T. Washington: Builder of a Civilization," by Lyman Beecher Stowe and Emmett J. Scott.

The following volumes will be published next month by Frederick A. Stokes Co.: "The Conqueror," by Gertrude Atherton (new and revised edition); "Persuasive Peggy," by Maravene Thompson; "The Nameless One," by Anne Cleveland Cheney; "The Efficient Secretary," by Ellen Lane Spencer.

"Crainquebille, Putois, Riquet and Other Profitable Tales," by Anatole France, has now appeared in a translation by Winifred Stephens in the edition of the works published by John Lane ($1.75 net). The profit derivable from this bundle of stories presumably resides in their exposure of human stupidity and credulity masking as justice, piety, philosophy, and charity. Crainquebille, a costermonger, failing to "move on" at the order of the police, is fined and jailed on a trumped-up charge that he cried, "Down with the cops." On his release from prison, finding himself dropped by his former customers and driven to misery, he repeats the cry, "Down with the cops," in the hope that he will be jailed again and provided for by the "justice" which has ruined him. But the police take him for a mere addle-pate, and refuse to arrest him; he plunges into the darkness. "Putois" illustrates, with malicious innuendo, the "natural history" of a myth. To avoid an unwelcome invitation to a Sunday dinner, a white lie is told: "Putois the gardener is coming." Thus begotten, Putois—with no more substance than the illustrious Mrs. Harris—rapidly acquires every essential attribute of human existence. Whatever in the neighborhood lacks visible explanation, is credited to him—including the paternity of otherwise fatherless children. Belief in his reality becomes at last so nearly unanimous that the original inventor of Putois cannot hold out against it. "Riquet," a dog's philosophy based upon his introspection and his observation of his master, is by implication a burlesque account of human conceptions of deity. "Emdée, or Charity Well Bestowed," is a vinaigrous satire on the benevolence of the rich as represented in the conventional story written for the Christmas holidays. In general the first taste of these tales is somewhat bitter. Ruminated, they are not so unpalatable; for, though there is a rather indecent cynicism in the husk, there is much decent sentiment in the kernel. Through the amused, contemptuous, almost despairing mask of the satirist, flash out, now and then, eyes sincerely enamoured of sweetness and light.

Nothing leaves a more unpleasant impression on the traveller in Ireland than the squalor of its cities and towns—their dreary, ill-kept streets, their air of poverty and *laissez-faire*, their lack, in all but a few notable cases, of distinguished architecture and picturesque atmosphere. Yet, behind all this, as Mr. Stephen Gwynn reveals in "The Famous Cities of Ireland" (Macmillan; $2), there is a history of fascinating and gallant exploits, and a promise of the new prosperity accruing to the country generally under the new Land acts. The bravery of Derry and Limerick is known to all who have read Macaulay; the distinction of Kilkenny, which fostered Berkeley, Congreve, and Farquhar, is no less noteworthy; and Dublin, in the eighteenth century, was one of the most brilliant capitals in Europe. But who that knows the Galway of to-day would imagine that in 1585 the Government found it necessary to enact sumptuary laws there, and drastic ones at that? Mr. Gwynn's book contains much information of this character which, though known to the student, will undoubtedly be new to the general reader. It contains also one or two brilliant surveys of troublous periods in which the author has had the courage to take the scholarly rather than the popular view. This is notably the case in his references to the Norman Conquest, the real tragedy of which was that it did not impose a universal system of law throughout the country, but established one law for the Pale and another for the "wild Irishry." Even the Church made this distinction, so that one hundred and fifty years after Strongbow's landing, the Irish King of Ulster made a bitter complaint to the Pope against the Cistercians of Inch "for appearing publicly in arms, they attack and slay the Irish and yet celebrate their Masses notwithstanding." *Ab uno disce omnes!* However, since Mr. Orpen's admirable volumes were published a few years ago we know that the Normans brought comparative law and order wherever they were strong enough to do so. They founded the cities as alien fortresses and developed them as commercial centres, for the native Irish never showed much talent for municipal development. The ruin of the cities later on was not due to these old Anglo-Irish, but to the greed of English merchants. While Mr. Gwynn (an Ulster Protestant who is also a Nationalist member of Parliament) has not succeeded in keeping politics out of his book, he has done better in this respect than most writers of books on Irish subjects. He pays an adequate tribute to the business ability of Belfast. His most conspicuous failure is his inability to communicate the charm of places he loves. Not in anything he writes, for instance, is to be discovered the lure of Dublin which has drawn Mr. George Moore back to the capital of Ireland after he had written three volumes to explain why he must leave it! Had Mr. Gwynn possessed this secret he might have written a piece of literature instead of writing by far the best of the guide books. It is excellently illustrated with colored plates and sketches by Mr. Hugh Thomson and has a good index.

"We Discover New England," by Louise Closser Hale (Dodd, Mead; $2 net), is a very attractive volume of the gift-book type. Mrs. Hale writes with a pleasant vivacity which seldom descends to the level of mere sprightliness—as if writing were a form of recreation, and not conceivably a task or an art. The motor journey through New England here recorded is an occasion for the mildest of adventures, unless motoring and sight-seeing are themselves adventures. With a considerable knowledge of European highways, Mr. and Mrs. Hale here set forth for the first time to explore unknown America. They used, to be sure, the method naturally followed abroad, of a careful itinerary and a frank use of guide-books, and were therefore able to carry out the plan of seeing in a week or two many of the show-places of New England. But there are different ways of seeing even a show-place, and Mrs. Hale's is that of a traveller rather than a tourist. Their course took them almost straight north along the New England border through the Berkshires to Burlington, with a détour to Cornish and Woodstock; from Burlington east through the White Mountains to Poland Springs and Portland; then south along the coast, through Portsmouth, Newburyport, Gloucester, and Salem, to Boston, and so cutting off the Cape to Newport; thence along the Sound to New Haven, and by a night run to New York. There is nothing to be said for the novelty of this route, but the most interesting travellers' tales have to do with the old recognizable things seen through fresh eyes. Mrs. Hale has followed the high lights of the New England landscape without letting them dazzle or (what is quite as familiar an experience) bore her. She has visited her show-places not, as it were, to do, but to be done by them; and has reaped the reward of the simple-hearted and generous-minded traveller. Not simple-minded! Mrs. Hale has a vein of real and spontaneous humor which keeps her from taking either her theme or herself (or her husband!) with undue seriousness. The unpretentious merit of her record is enhanced by Mr. Hale's charming sketches.

As a title, "Out of Doors" (Appleton; $1.25 net), by Emerson Hough, is certainly lacking in definiteness: the book is not a collection of nature poems or essays, but a manual of practical information for those who choose to live out of doors more or less—campers, fishermen, hunters. The author has the somewhat unusual gift of knowing how to chat spontaneously (witness, for instance, his slang) without digressing unduly from his task of telling the half-experienced woodsman and the "rank greenhorn" what a sensible outfit is; how to fight mosquitoes, black flies, etc.; how to prepare for a canoeing trip, or for mountain camping; how to use a gun, a bird dog, or a campfire; how to avoid panic on getting lost. To devotees of an out-of-doors life, the book will prove useful as well as entertaining. Mr. Hough, though dogmatic—*e. g.*, "Always wear a waistcoat, whether you keep it buttoned or not"—is nothing if not shrewd. Yet his chapter on The Woman in Camp may rub the creature in question the wrong way; thus, "If I had to give only one word of advice to the woman going into camp, I would say, 'Smile.'" An entire chapter rightly is devoted to the topic of shoes, and the

author rightly concludes the type of shoe in use in the United States army to be the best adapted to the needs of the hunter and tramper. Clearly, a book of this kind may prevent a great deal of discomfort and pain, not to mention expense.

That war correspondents are able to do nothing more than hang about the outskirts of the great battle ground and snatch bits of material at second-hand or worse, is an impression which books like Horace Green's "The Log of a Non-Combatant" (Houghton Mifflin; $1.25 net) are bound to dispel. On the outbreak of the war Mr. Green at once set out for the front as staff correspondent of the New York *Evening Post* and special correspondent of the Boston *Journal*. With him, for the adventure of it, went an old friend, a lawyer of Boston. A few weeks later they were at Termonde just before the second German bombardment, and were the last to crawl across the remnants of the ruined bridge before it was dynamited by the Belgians. But this was not close enough to the centre of things. Two days later they set out from Ghent for Brussels, in a Belgian military automobile, carrying mail from Dr. Van Dyke at The Hague to Brand Whitlock at Brussels. The car bore American colors, and contained also Mr. Van Hee, American Vice-Consul at Ghent. They presently ran into the thick of a skirmish between some Belgian infantry and German pickets, and by way of escape drove straight between the opposing lines, and were duly arrested by the German patrol. It was a serious offence, but resulted in nothing worse than eight days' retention within the German lines, part of the time at Brussels, with plenty of chance to talk with Germans of all ranks, and to see the inner surface of their military system. They were then shipped in a box-car to Aix, took a passenger train over the Dutch border, and were promptly arrested at Maastricht in the neutral Netherlands—probably, Mr. Green thinks, by the indirect agency of the German Secret Service. They were finally told that correspondents were not tolerated there, and sent to The Hague. Three days later Mr. Green started on what he calls his "lucky trip" into Antwerp, "the besieged." Chances were not bright for getting into Antwerp. By steady bluffing, a little exhibition of clog-dancing, and the timely application of cognac to certain sentries, he succeeded in gaining entrance. The same day Winston Churchill's English "army of relief" appeared. But hopes of relief were vain; presently the Germans got their big guns in place, and the bombardment began. The Belgian and English troops and the people left the city by the famous pontoon bridge; and Mr. Green and several other non-combatants remained till the city was fairly in ruins. Mr. Green seems to have accepted all possible chances of death by shell-fire; it was a lucky trip, as we understand it, not so much because he escaped, as because he almost did not! Much of the rest of his war experience was within the German lines, in Berlin, and elsewhere. He has very firm convictions on the subject of the "atrocities" charges against the German soldier as a type, and an Appendix discusses the matter at some length. The book is admirable for its simple and unpretentious way of recording things; it is quite free from taint of the American magazine or Sunday newspaper style.

The official text of the "Journals of the Continental Congress" for 1782, comprising Volumes XXII and XXIII of Mr. Gaillard Hunt's monumental edition (Government Printing Office), is, as the editor points out, relatively of meagre bulk; but the gaps have been filled, so far as possible, by additions from the papers of the Congress, and by the inclusion, for November and December, of Madison's notes of the debates. Substantively, the record is one of marked activity. The military establishment was continued, though with some reduction, notwithstanding the cessation of active hostilities; and as late as August the States were urged not to slacken their efforts to keep the country in a good state of defence, as one of the surest means of effecting a satisfactory peace. The organization of the National Government made progress with the reconstitution of the Department of Foreign Affairs, the establishment of a mint, the extension of the postal service, and the adoption of a seal. The Federal Court of Appeals was in operation. A plan for the protection and encouragement of American commerce, submitted in May, is an informing economic document. The diplomatic situation, however, was disturbing. In January the terms of a consular convention with France were agreed to; but, for the purpose of hastening a treaty with Spain, Congress was actually ready to surrender for a time the free navigation of the Mississippi. At the beginning of the year, also, came the announcement that France would lend no more money, and in May followed a request for an accounting. Without foreign aid, the United States were still helpless, and in September Congress made bold to solicit an additional loan of four million dollars. Throughout the year, the absorbing problem of revenue grew steadily more difficult. The scheme of apportioning national charges among the States according to the value of land, provided for in the Articles of Confederation, proved unworkable; the States neglected their constitutional obligations entirely, or raised only a part of their quotas; New Jersey proposed to apply to its own military uses a part of what it had raised to meet the requisitions; while the refusal of Rhode Island to approve the amendment for a 5 per cent. revenue duty on imports gave occasion to Virginia to rescind its own ratification of the amendment. An attempt to censure David Howell, of Rhode Island, the leader of the extreme State rights party in that State, for his connection with the defeat of the revenue scheme, brought on a lively controversy, but the honors of battle remained with Howell. The status of prisoners of war on both sides was also perplexing, and for a time threatened serious consequences. The late summer, however, brought a gleam of light, for in August Congress had practically agreed upon the terms of peace. The publications of the year, as listed in Mr. Hunt's bibliography, were few, and do not include any instalment of the Journals themselves.

In "The Nightside of Japan" (Lippincott; $2.50 net) Mr. T. Fujimoto has covered a wide field with great thoroughness and discrimination. He has given an intimate account of Tokio and its people, an account which could only have been written by a Japanese. He has chosen his incidents wisely and described them well. At the same time, he has contrived to supply his readers with a really prodigious amount of information. One is told the price of a bowl of rice and the name of a certain street where it is served at midnight, and one may learn the exact situation of the oldest cherry tree in the city as well as the particular night in spring when its branches will be hung with colored lanterns by way of celebration. There are also descriptions of wrestling, of parks, of children, of lovers, and of waterways, boats, and crickets. These are treated with detail and without prejudice. Mr. Fujimoto finds something interesting in every phase of his city, and he understands its people and the motives which lie behind their virtues and their vices. He writes of their religions and ideals, and he describes their fêtes and dissipations with a very disarming Oriental candor. He believes that any human deed and any popular faith deserve publication; therefore his chronicle could not fail to be comprehensive and outspoken. The style is largely a matter of the author's own devising. Whenever he finds the English language inadequate he creates a grammar and syntax according to the needs of the moment. The result is to give to the volume an individual flavor, unique and engaging.

The reader experiences some surprise in finding Povl Drachmann's handsome little volume, "The Industrial Development and Commercial Policies of the Three Scandinavian Countries" (Oxford University Press; $1.50), published under the auspices of the Carnegie Endowment for International Peace. There is no immediate reference to the problem of war and peace in the volume, and the Endowment proposes evidently to construe liberally the definition of its field of publication. Presumably the book is classed in the Endowment's programme as a study of "conflicts of economic interests in the present age," or of "the unifying effects of international trade"—but so might be most other studies of recent economic conditions. While the book is a useful survey of the topics that it covers, it makes no very important additions to the material that can be found in the studies by Scharling and Fahlbeck, in the "Schriften des Vereins für Socialpolitik," and in the books published for the Paris Exposition of 1900 by Sundbärg and by Konow and Fischer. Scholars may hope at least that in the future the Endowment will require of its authors some indication of the sources from which the statements of the text are drawn. The present writer makes no reference whatever to his authorities.

An English translation of "A History of Economic Doctrines," by Charles Gide, of the University of Paris, and Charles Rist, of the University of Montpellier, was made by R. Richards, at the suggestion of the late Professor Smart, and is now published in this country by D. C. Heath & Co. Since the first appearance of this book in French, in 1909, it has been accepted as a standard manual on the part of the field that it covers, from the time of the physiocrats to the present. It is distinctly a better piece of work than Professor Gide's "Principles of Political Economy," which has had a considerable currency in American colleges, but which lacks vigor and consistency. The French have tried more earnestly than any other people to organize instruction in the history of doctrine, on which a course is given in every faculty of law; and they seem to have

peculiar gifts for the exposition of the subject. Their sympathy with varying views, their art of clear description and effective arrangement, are admirably exemplified in the work of Professors Gide and Rist, and make the book an excellent introduction to the history of political economy throughout the period in which it has been treated as a science. The translator, who is a lecturer in the University College of North Wales, appears to have done his work well.

Following the boundary line between government and economics (if in these days of prodigious governmental activity any such boundary can be said to remain), Prof. Samuel P. Orth, of the University of Pennsylvania, has brought together a volume of "Readings in the Relation of Government to Property and Industry" (Ginn; $2.25 net). There is a vast amount of available literature on this broad subject, but relatively little is of enduring value. The editor's task has been to cull out of the entire mass those discussions which go to the vitals of each problem, which speak authoritatively, and which may be regarded, to some degree at least, as having helped to build up public opinion. This is no easy task, to be sure, but Professor Orth has performed it with a sure hand and sound judgment. The selections relating to the police power, for example, are chosen with fine discrimination. Where else can one find a better résumé of this perplexing subject within the compass of seventy-five pages? The sections relating to public service commissions may also be singled out as showing breadth and catholicity of interest. The book will prove useful in many quarters, not only to those special students of political science or of business problems whom the editor has had chiefly in mind, but to lawyers and men of affairs as well. The text of the Federal Trade Commission act is included, likewise some interesting excerpts from the testimony given at the hearings before the Senate Committee on Interstate Commerce during the weeks when this measure was under consideration.

In Mr. Harry Parker Ward's volume devoted to "Some American College Bookplates" (Columbus, O.: The Champlin Press; $3 net) and limited to 500 numbered copies, will be found much to delight the eye and warm the heart of the book-lover; for it follows naturally that a love of books also embraces an appreciative interest in the marks of their ownership. About 375 examples of the art are given, a few being printed from the original plates. The collection is not confined to college book-plates; it also contains some of individuals, fraternities, clubs, and learned societies. Naturally, there is a wide range of artistic merit and interest. The collection is particularly rich in examples of the work of American designers and engravers. A number of plates reproduced in Mr. Clifford N. Carver's charming little volume, "Bookplates of Princeton and Princetonians" (1912) are included. The compiler contributes a brief introduction, and Mr. Theodore Wesley Koch, librarian of the University of Michigan, a pleasantly discursive essay bearing the infelicitous title, "A Defense of Bookplates." No defence or apology appears to be necessary, and Mr. Koch should not take too seriously criticism like that which he in part quotes from the Contributors' Club of the *Atlantic Monthly*. This critic clearly was indulging in a bit of whimsy. A noteworthy contribution to the volume is Mr. Winward Prescott's "Check List of Bookplate Literature." His introductory remarks will be of service to those who have more than a passing interest in the subject. A lengthy list of advance subscribers is printed, and it is gratifying to note that this attractive volume will find a place in many of the leading libraries, where it may be enjoyed by those who care for bookplates, but who are unable to purchase the work for their own shelves.

The history of the western highlanders of India, known as the Mahrattas, is full of the stirring incident and picturesque situations that lured the pen of Scott, and, as is usual with all mountainous, border tribes, their history is told largely through the lives of their chiefs. Prof. H. G. Rawlinson's task in "Shivaji the Mahratta" (Oxford University Press; 85 cents) is simplified because the Mahrattas comprised, at the heyday of their power, a homogeneous aggregation of clans that readily fused themselves under the great leader Shivaji into a young and virile nation. Secure in their fastnesses of the western *ghats*, the Mahrattas offered little resistance to the early Mughal invasions. But, as the Moslem tide slowly encroached towards the east and south of the Mahratta hills four centuries later, across the rich plains that they had come to regard it as their peculiar privilege to harry in frequent raids, the need arose to stem or divert this tide. When the power of the nearest Mohammedan King at Bijapur became a too onerous and intolerable burden, the inevitable leader arose with Shivaji, in 1657, who may be readily compared to Robert Bruce. About this Hindu fighting race a good deal of Hindu romance still clings: according to their lights they alone represented the only serious Hindu opposition offered the Mughals; this was enough to galvanize the Mahrattas into a nation under wise leadership and laws, with a vision of empire. But the force of sheer personality was ever the secret of Shivaji's success, and their subsequent decline and eventual disintegration under a purely Brahman dynasty would seem to have been foredoomed when we remember their picaresque origins.

In Shivaji the Mahrattas found and lost their predestined leader. Professor Rawlinson has been at considerable pains to divest his fascinating hero of the rich accretions of myth and legend laid on by Hindu chroniclers, ancient and modern, a task in itself of no small compass. In this attractive biography he has successfully gleaned and regimented facts that still retain their original glamour: that the Shivaji, reviled as a "mountain rat" and freebooter, had a statesmanlike vision, a deep sense of nationalism for his dashing and volatile clansmen, that lifted the Mahrattas into Indian history for a brief and stirring page. From the scornful Mughal angle Shivaji more or less merited the obloquy heaped on him by their historians, which was followed by Western writers. True to his origin and race, he was crafty and treacherous, yet an ideal leader for their guerrilla mode of warfare, and incidentally one of the finest cavalry generals India has produced. Thus, there is no need to mitigate his treacherous conduct, when he assassinated the Mughal general, Afzal Kahn, in a *durbar*. Until his death, April 5, 1680, Shivaji was a consistent goad and deterrent to Mughal power: "On that day," wrote the Mughal chronicler, Khafi Khan, in a Persian anagram on the date, "the Kafir went to Hell." Along with Shivaji's great administrative powers the most interesting side to this wily leader was his love of poetry, of the ballad type, celebrating his race and even his own exploits, a taste that is true to his highland temperament. Professor Rawlinson is to be commended for his illuminating appendix on Shivaji's poets laureate, Tukaram and Ramdas, and for the typical verses translated. Curiously enough, in contrast with their wild border tradition and antecedents, we find these two favorites of Shivaji's empire eschewing the ballad, and exhibiting a metaphysical style peculiar to the English school of Crashaw, Herbert, and Vaughan. Tukaram in particular, as Professor Rawlinson points out, indulged to an extraordinary degree in its mysticism and quaint conceits. We can only remark this literary phenomenon, as contrasted with the later popular Mahratta ballads, as a great tribute to the deep religious fervor for Hinduism always shown by Shivaji, and to the state of culture prevailing at his court at the apogee of his power. In so attractive and readable a book it is a pity that the map should prove inadequate for the needs of the American reader.

Drama

There is uncommonly good craftsmanship in the "Jane Clegg" (Holt; 80 cents net) of St. John G. Ervine. The whole story, from beginning to end, is exhibited in action, in perfectly simple, natural, logical fashion, without any recourse to explanatory dialogue. In this respect it is a notable bit of genuine drama. And it has other distinctive qualities. It is, in the true sense, realistic—dealing with unmistakable human beings—it is consistent and absolutely credible; it is compact, ingenious, and interesting. The tale itself is drab and sordid, but it is dignified by a very definite purpose and meaning. Virtually it is an attack upon the English divorce laws, inasmuch as it asserts the right of a good wife and mother to rid herself of a worthless and faithless husband, who yet has not brought himself within the reach of existing statutes. In other words, it is a plea for the establishment of equal moral obligations upon husband and wife. And the case for the plaintiff, in this particular instance, could not easily be more strongly put. It is all the stronger because it is stated without hysteria or exaggeration. The theme, of course, is one of the oldest in stage and other fiction and Mr. Ervine, like other predecessors who have taken his side of the debate, ignores the one natural impediment, with its hitherto insoluble complications, which has barred the way to an equable solution of a cruel problem. Unfortunately the consequences of male and female incontinence, in the material view, are not identical. In equity the case of Jane Clegg is perfect. In full confidence she has married a specious, genial, selfish, mean, shifty, and utterly immoral scoundrel. She has slaved uncomplainingly for him and her children, to whom she is devoted. Then she inherits a little fortune of seven hundred pounds, out of which he tries to wheedle her. When he steals from his employers—as he avers to pay bad debts for which they

ought to be responsible—she repays the money rather than let him go to jail; but when she discovers that he has used the stolen funds to buy tickets for Canada for himself and another woman, that he is an incorrigible liar, gambler, and wastrel, she refuses to have anything more to do with him and turns him out of the house. There is not an incident in the play that is not of every-day occurrence. There is not a line of "fine writing" or any attempt at theatrical emotionalism, but the simple dialogue is full of pregnant suggestion and the interest is progressive and cumulative, up to the final climax. The characters of the three principal personages—the patient, conscientious, resolute, and perplexed wife; the parasitical, conscienceless husband, and his ignorant, foolish, doting old mother, whose misplaced maternal zeal precipitates the catastrophe—are unfolded, in speech and action, with remarkable consistency, veracity, and insight. In short, the whole piece might be an actual transcript from life. Dealing faithfully as it does with the commonplace, it does not, of course, exhibit any of those literary or imaginative qualities essential to a great play, but it is an able, skilful, and vital work, and a rarely good example of modern realism. Moreover, it is admirably adapted for theatrical representation, though its freedom from exaggeration, which is its chief artistic virtue, would probably be regarded as a fatal defect by most modern stars and managers.

Five of the Masques, written by Thomas Wood Stevens and Kenneth Sawyer Goodman, and produced by the Art Institute of Chicago, have been collected in a handy volume (Gomme & Marshall). They furnish substantial evidence of the notable development in the West of this ancient and admirable form of literary and artistic entertainment, and set an example which should spur the East to generous rivalry. Of the works themselves, which have been very fully described in the past, it would be difficult now to say anything new. They carry with them their own commendation. Written to suit special conditions, and with the purpose of making the spectators participants in the action devised for their delectation and amusement, they are remarkable examples of sympathetic, imaginative, and skilful collaboration. The reprinted pieces are "The Daimio's Head," "The Masque of Montezuma," "Cæsar's Gods," "Rainald and the Red Wolf," "A Pageant for Independence Day," and "The Masque of Quetzal's Bowl." As Percy MacKaye points out in a foreword, they are more essentially dramatic than the Masques of the Bohemian Club of San Francisco, played in the open air, with elaborate choral and instrumental accompaniment. Most of them, indeed, could with little difficulty be made serviceable in the regular theatre. The literary work in them has a distinctive quality such as is rarely met with on the modern stage. Dealing with widely contrasting eras and nationalities, the authors have succeeded in reproducing the appropriate atmosphere in each case with singular felicity. "The Daimio's Head" is saturated with the spirit of old Japan; "Rainald and the Red Wolf" is a capital specimen of mediæval romance, seasoned with some vigorous satire, while in "Quetzal's Bowl," the most imaginative perhaps of the whole series, past and present are most adroitly commingled. In the Independence Day Pageant an imitation of the Elizabethan chorus is introduced with excellent effect. All of them have a very positive literary, artistic, and educational value, while offering novel and most attractive entertainment, just the sort of intellectual distraction for which a moderately intelligent public would be grateful.

Methodical students of the drama will find Barrett H. Clark's "The British and American Drama of To-day" (Holt; $1.60 net) a very useful handbook if they happen to have a tolerably complete theatrical library at their disposal. Without it the brief comments on plays with which they are not familiar will not be particularly enlightening. The play lists, biographies, and bibliographies will afford them much convenient and accurate information. There are profitable suggestions also in the examination papers appended to most of the chapters as helps to critical discrimination. It may be observed, however, that some of the questions are much more easily asked than answered, as the art of dramatic construction, which must always be governed largely by ever varying conditions, is by no means an exact science. The critical opinions of the author himself will not meet with universal acceptance, least of all his estimates of the relative values of much modern dramatic work. The catholicity of his judgment is impaired by his enthusiasm for the advanced modern school. He says in his preface that in his selection of plays for discussion it was his aim only to select "typical plays of typical dramatists"—a somewhat vague expression. As a matter of count, he enumerates forty-five dramatists and discusses only forty-four plays. His list of dramatists is a fairly representative one, although some notable names are missing from it. He explains his omission of Israel Zangwill, Rudolf Besier, Charles Rann Kennedy, Alfred Sutro, and Somerset Maugham on the ground that they are not truly representative, or their work is represented by that of others. This is somewhat hard upon writers who have achieved notable successes in the modern theatre—and a trifle cryptic. "The Winter Feast" of Mr. Kennedy, although it failed in New York, is a drama of signal power and ability. In other respects the list of dramatists is amply comprehensive, but exception, perhaps, might be taken to some of the plays selected for peculiar consideration. On the whole, however, the book is a good one for its purpose. There is a somewhat obvious reflection to be made on the subject of modern stage directions. Mr. Clark suggests that the amplification of these into analytical, descriptive, and biographical essays by Bernard Shaw and other professed disciples of Ibsen is necessitated by the development of modern drama, with its complex settings and subtle characterization. In reply to this it may be permissible to point out that a marked tendency of modern drama is to return to the old classic unity of scene, not because it is artistic, but because it is cheaper. As for subtlety of characterization—vital characterization, that is—typical or other, it would be interesting to learn what modern dramatist has made any substantial advance upon Shakespeare, Jonson, Congreve, or Sheridan. The explanation of the elaborate foot-notes in the contemporary play is much more simple. They are virtually confessions of the conscious inability of the dramatist to make his characters self-revelational. Who needs foot-notes to explain the significance of leading characters in masterpieces of the old drama or the best of the new? Mr. Clark alludes to the mystery of the governing motives of Bernard Shaw. It is not hopelessly obscure. In his social and moral philosophy Mr. Shaw generally makes a point of traversing the popular view, apparently discerning in this method the shortest road to notoriety. This, probably, is the secret of his recent pro-Germanism, which was a miscalculation. Instead of the protests, that mean advertisement, he encountered an angry and contemptuous silence.

Music

FAVORITE SONGS OF FAVORITE SINGERS.

The winter's fashion in collections of music is to issue volumes containing the preferred songs of famous singers. Thus, the Oliver Ditson Company has published within a few weeks Emma Calvé's "My Favorite French Songs" and Elena Gerhardt's "My Favorite German Songs," while a third volume, now in press, will include the best of Geraldine Farrar's selections for recitals, regardless of nationality; and G. Schirmer has printed a collection entitled "Kitty Cheatham—Her Book." This volume includes twenty-nine songs, all but four of which were composed expressly for Miss Cheatham, and existed heretofore in manuscript only. Miss Cheatham's unique entertainments are intended primarily for young folk, but they are attended by as many adults as children. Fairy-land is largely represented, but this volumes does not include any of her negro songs, which she delivers so characteristically and which are really the best things she does. Perhaps these are reserved for another volume. In the present selection there are a few songs by Europeans, such as Schumann's "Guardian Angel" and "A Legend" by Tchaikovsky; but most of them are by Americans, among whom one is glad to note, particularly, the Californian song-writer, Edith Simonds, besides one of the most promising of our younger men, Walter Kramer; also Harvey Worthington Loomis, an American composer who still remains to be discovered by the givers of recitals. Some day—perhaps not till after his death—he will be found out, and then his songs will have a great vogue. He has stood in his own way by writing too many. Why not bring out a Loomis book containing some two-score of his best songs? He is a brother of the late humorist, Charles Battell Loomis, who, in a serious (and somewhat indignant) mood, first called the present writer's attention to his brother's genius.

Emma Calvé's name, until a few years ago, was associated in the public mind almost exclusively with her Carmen, which was so unique and marvellous a creation that she found it difficult to persuade the world that she had a right to appear also in other parts, such as Ophelia, Marguerite, the Navarraise in Massenet's opera, and San-

tuzza or Suzel in Mascagni's "Cavalleria Rusticana" and "L'Amico Fritz." Since leaving the operatic stage, she has sung in concert halls and at vaudeville entertainments, with her vocal charms almost undiminished (she is not yet fifty). The two volumes containing her fifty-two favorite French songs include two airs from Bizet's operas. Among the other composers represented are Lalo, Massenet, Gounod, Saint-Saëns, Chausson, Delibes, Fauré, Franck, Marie Antoinette, Mme. de Travanet; nor are men of the present day, like D'Indy and Debussy, left out. There are also a few folk-songs.

Of the German vocalists at present entertaining American audiences the most prominent is Elena Gerhardt (Julia Culp is not German, but Dutch). She had the good fortune to be launched as a concert-singer by Arthur Nikisch, who accompanied her at the piano and by his endorsement paved an easy way for her international fame. With thousands of German songs to choose from, she naturally found it difficult to name a few as her favorites. "My Favorite German Songs" contains twenty-nine numbers. The composers represented are Beethoven, Schubert, Schumann, Liszt, Franz, Brahms, Jensen, Wolf, and Strauss. In an introductory note the singer calls attention to the fact that these lieder have been not only her own favorites, but "have proven to be the best-loved by a thousand audiences."

The editor of the Musicians Library, published by the Oliver Ditson Company, William Arms Fisher, has just added to it a volume of his own which might also be included in the series of "My Favorite Songs." Its title is "Sixty Irish Songs," and it includes, besides twenty old favorites, forty more, which Mr. Fisher liked best after a thorough examination of more than two thousand Irish folk melodies. Mr. Fisher has not only shown admirable judgment as editor of the Musicians Library, which has brought home to many thousands the best songs and piano pieces in the world, but he is also one of the most original of American song writers. He, too, is still waiting to be discovered by the givers of recitals; but his day will come when these professionals shall find out, as they must ere long, that the "Allerseelen" of Richard Strauss, which they sing so often, is not nearly so inspired a song—nor so effective—as Mr. Fisher's setting of the same poem under the title, "Wie einst im Mai"; find out, furthermore, the rare charm of others of this American's songs, such as "I Wait for Thee" and an unusually beautiful Irish lullaby called "Gae to Sleep."

For the "Sixty Irish Songs" Mr. Fisher has provided new pianoforte accompaniments, in a style worthy of those of his own best songs. They are modern without being offensively so by reason of uncalled-for cacophonies. Folk music, having no harmony or accompaniment of its own, can be treated in a style as simple as Haydn's or as subtle and sophisticated as Debussy's. Mr. Fisher's accompaniments take the middle course, and they certainly add much to the charm of these songs without altering their spirit or national flavor. In the case of that exquisite lyric, "My Love's an Arbutus" ("Coola Shore"), the setting of Charles Villiers Stanford has been retained, with a few slight alterations, but "The Little Red Lark" has been reset entirely. Both versions are good—and what a heavenly song it is—a song that brings tears to the eyes of the most blasé concert-goer. In view of gems like these one feels tempted to endorse Dr. Ernest Walker's opinion—shared by thousands—that "Irish folk-music is, on the whole, the finest that exists." Mr. Fisher's volume, the value of which is enhanced by an illuminating introduction, will do much to give further vogue to this opinion.

HENRY T. FINCK.

Art

A PROPHET OF THE NEW PAINTING.

Modern Painting, Its Tendency and Meaning. By Willard Huntington Wright. New York: John Lane Co. Illustrated. $2.50 net.

Like young Lochinvar, Mr. Wright comes out of the West, his dialectic is more mettlesome than any in the broad border. Everything except his literary manner, which is acutely jargonish, is easy to him. He comes to set crooked matters straight once for all. There is no hesitancy as to his vocation, no mercy for any who see otherwise than himself, and naturally there is the clarity and hardness of this sort of conviction. He knows precisely what has been amiss with the art of painting:

> For centuries painting has been reared on a false foundation, and the criteria of æsthetic appreciation have been irrelevant. Painting has been a bastard—an agglomeration of literature, religion, photography, and decoration.

Happily, that is being put right by the simple process of jettisoning from the good ship Painting the irrelevant parts of her cargo. Or, less figuratively, "the efforts of painters for the last century have been devoted to the elimination of all extraneous considerations, to making painting as pure an art as music." The qualities that make a great picture are singularly few—perhaps three: First, a vivid effect of mass in third dimension; second, of abstract mass representing no recognizable object, and hence free from irrelevant associations; third, the mass to be expressed solely by color—which is the only authentic medium of painting—by color at its intensest, in the primaries. Or, trying for a still briefer summary, the business of painting is to express abstract volume solely through color. How simple and conclusive the doctrine is! How much extraneous thinking and feeling the present writer might have spared himself had the true inwardness of painting been vouchsafed to him twenty years ago. But that was impossible, for the great consummation was attained only about two years ago, when two young American painters, Morgan Russell and Macdonald-Wright, exhibited *chez Bernheim-Jeune* and issued the manifesto of Synchromism. They first knew how to make pure color express significant form; thus they purged painting of all non-æsthetic constituents and raised it to purity. The final act of discovery has been made, and we may permit ourselves an indulgent moment of pitying retrospect under our author's firm guidance:

> So long as painting deals with objective nature, it is an impure art, for recognizability precludes the highest æsthetic emotion. All painting, ancient and modern, moves us æsthetically only in so far as it possesses a force over and beyond its mimetic aspect. The average spectator is unable to differentiate his literary and associative emotions from his æsthetic ecstasy. Form and rhythm alone are the bases of æsthetic enjoyment; all else in a picture is superfluity. Therefore, a picture, in order to represent its intensest emotive power, must be an abstract presentation expressed entirely in the medium of painting; and that medium is color. There are no longer any experiments to be made in methods. Form and color, the two permanent and inalienable qualities of painting, have become synonymous. Ancient painting sounded the depths of composition. Modern painting has sounded the depths of color. Research is at an end. It now remains only for artists to create.

After such brave words it is something of a shock to see what are the triumphs of the new school in Morgan Russell's arrangement of celestial spheres, very like Besnard's ceiling for the Hôtel de Ville, and Macdonald-Wright's set of polychromatic spirals, which are gay and pleasing after the fashion of a catherine wheel seen through smoked glass. In both cases there is an uneasy going in and out of the pattern; this we take to be the abstract sense of mass which enraptures our critic, and for him is the only æsthetic verity. Now, of course, if a man is made ecstatic by a particular titillation of his retina, that is for him æsthetic value. When this ecstasy is too exceptional, however, one may regard it as eccentric and negligible. Schiller, for example, got high olfactory bliss from the rotten apples which he kept in his study. But the case is more properly one of morbid psychology than of æsthetics. Doubtless, a critic who has incubated—we use the word advisedly, for the egg is palpably of another laying—an æsthetic of mass, and an organon for its expression, will honestly get more bliss out of the expression of volume according to his own formulas than he can out of any work of art whose production he has been unable to superintend. The entire sincerity of such an experience may be conceded, without admitting for it any general significance.

Mr. Wright's survey of the history of art considered as leading up to Synchromy is as brilliant as it is perverse. The older artists were merely victims of their subject-matter, the greatest, at most, successful evaders of it. Giotto cared nothing for his legends save as they permitted him to express volume. For centuries painting lingered in this

stage, an ill-destined slave of literature. But in the middle of the last century Courbet and Daumier started matters by achieving an intenser feeling for mass. The realists and luminists did good work in breaking down the veneration for particular subject-matter. The Post-Impressionists, or rather their precursors, Van Gogh, Gauguin, and Cézanne, achieved a further liberation from the subject and representation by claiming a free license for distortion. Cézanne did the more important work of making color directly expressive of mass and position. Matisse and his herd still further distorted natural appearance. It was, indeed, by this time so damaged that to throw it overboard was the inevitable next step. There was a moment of hesitation when the Cubists and the Futurists tried to reintegrate a natural appearance already "fatally twisted." Happily, their notion of natural appearance was so unlike the data of common vision that it hastened the work of disintegration. It got the world well interested in what seemed unnatural, and the next best thing to being unnatural in painting is to seem so. After all, Matisse is merely a decorator, Picasso a lyrist, and Severini an illustrator. After this attempt to refurbish the ideal of imitation, Morgan Russell and Macdonald-Wright arose, with the auspicious results which we have already indicated.

This brief abstract of the history of art as seen through Synchromistic eyes does injustice to the pungency and spirit of Mr. Wright's survey. He has the qualities of his wrong-headedness, in energy and consistency. To read him carefully is to have to think. He says many good things incidentally, and if he can learn to write English and can purge his mind of narrow formulas, he may go far.

What ails his thinking may be very briefly indicated. He carries to the absurd the romantic dissatisfaction with the complexity of the human individual and of the work of art. Romanticism split up the artist, who formerly had been regarded as integral, into mere man, and artistic superman. Similarly, Romanticism split up the work of art into an artistic and inartistic part. Formerly it had been assumed that the work of art was highly complex, its value lying in the whole nexus of relations it presented. It was not valuable because of subject matter, but because of subject matter as expressed. Nothing was negligible in it. What really counted was the exquisiteness of the composite. The work of art was a humanistic integer, just as the artist was a human integer.

Neo-Romanticism has steadily dehumanized both. The artist is no longer a man, but a special capacity inhering in a necessary but extraneous organism; the work of art is some residuum arrived at by eliminating irrelevant layers, like an onion peeled to the core. The work of art is not gold, but a lump of ore from which gold may be smelted. The attainment of purity in art may be regarded as a radical unloading process. The early romanticists threw over social control, the realists threw over traditional taste, the impressionists unloaded memory. Then followed a gradual jettisoning of natural appearance, the victim being prepared for the plunge by preliminary racking. Finally, natural appearance was jettisoned, and to celebrate the auspicious event the ship was set on fire. Thus painting was purified and Synchromism records the effulgent reflections of the cathartic funeral pyre.

Now, we need to set against this ingenious false logic and anti-humanistic splitting up of complex unities merely a reasonable degree of humanistic common-sense. Let us not achieve simplicity by shedding all the difficulties. The process is too facile; its success too cheap. No historically minded person, no man who in the broader sense had lived, could have written this book of Mr. Wright's. It emanates from the cave where phantoms acquire a monstrous consistency. A ray of sunlight, a single impulse of humor, would shatter the entire dream fabric.

With characteristic conservatism the New York Historical Society presents in its new "Catalogue of the Gallery of Art" what is virtually a reprint of the catalogue of some forty years ago. There is, however, a more logical arrangement, corresponding to the better hanging facilities of the new building, and a useful appendix of brief biographies of artists has been added. The most welcome innovation is the eighteen photogravures which reproduce the best pieces of the collection, and alone make the catalogue necessary to the student. With a single exception, the transfer of a former "Perugino" to Macrino d'Alba, the considerable critical literature that has been written about the gallery has been ignored. One can entirely understand the reluctance of the authorities to enter into the merry war of attributions. Yet the grave errors which Mr. Bryan took over from the preposterous catalogue of Artaud de Montor should have been expunged. It is a pity to reproduce as a Guido da Siena, for example, the admirable Florentine Madonna, No. B3, which has all the marks of Orcagna's studio, and has been ascribed to Nardo di Cione by Suida and Sirén. It is even worse to reproduce as a Giotto the magnificent Birth Salver, No. B5. It has on the back the arms of Lorenzo de Medici's father and mother, and was almost certainly prepared for his birth in 1449. That is to say, more than a century after Giotto's death. Such information is entirely available in François Monod's paper on the gallery in the *Gazette des Beaux Arts*. It is precisely the kind of information that visitors to an historical society should receive. In the first twenty-five numbers of the Bryan collection, Italian Primitives, there are eight errors as bad as the above. It is a serious blemish, which could easily be removed. Even if the Society wishes to keep out of the attribution-mongering game, it should at least get right the approximate date and the school of the pictures. It would add to the usefulness of the catalogue if the material on which the painting is made were registered.

"A Loan Exhibition of Early Italian Engravings (Intaglio)," issued by the Fogg Art Museum, at Cambridge, through the Harvard University Press, is a remarkable sort of catalogue. It is gracefully dedicated to that fine amateur, the late Francis Bullard, a benefactor both of the Fogg Museum and of the Boston Museum of Fine Arts. The field of early Italian engraving was a favorite one with him. Of the 119 prints in this loan exhibition, a number are from his collections, others are lent by the new assistant director of the Fogg Museum and compiler of this catalogue, Paul J. Sachs, but the bulk of the exhibits are from the rich stores of the Boston Art Museum and the Gray collection, Harvard. The ground is representatively covered from the earliest *niello* prints, to the work of Jacopo Francia, Jacopo dei Barbari, and Giulio and Domenico Campagnola. All of the eight prints by Mantegna are included, as well as many of his school, often in exceptional impressions. All of the plates are reproduced, and the ample quarto format generally permits of reproduction to true scale. Thus the catalogue, with its succinct technical and biographical notes, is an excellent compendium of the subject, a genuine resource for students of this fascinating field. Here and there the annotation might have been advantageously extended. Thus, the nude by Giulio Campagnola, No. 102, is almost certainly a copy of a lost original by Giorgione, and the novel stipple technique is induced by the need of imitating the finesses of an oil painting. We may also venture the suggestion that a painting by Sebastiano del Piombo must underlie the fine print by Giulio Campagnola of Christ and the Woman of Samaria, No. 95. Here is not the place to extend such observations. They are made merely to illustrate the usefulness of this most convenient catalogue to all students of Italian art. In thus making its temporary exhibition serve the permanent advantage of special scholarship, the Fogg Museum sets a valuable example.

Mr. James Ward, formerly a professor of decoration in Sheffield, and the author of several manuals of decorative art, has added to these a volume entitled "Colour Decoration of Architecture" (Dutton; $3.50 net). Its scope and purpose are explained in the sub-title: "Treating on colour and decoration of the interiors and exteriors of buildings. With historical notices of the art and practice of colour decoration in Italy, France, Germany, and England. For the use of decorators and students." To combine successfully in a volume of but 131 heavily leaded pages of text an adequate discussion of the principles of color decoration in the widely distinct fields of interior and exterior architecture, with an historical *aperçu* of color decoration in Italy and three other countries, is probably an impossible task; certainly, if undertaken, it must require the utmost condensation, the most carefully systematic treatment, and great conciseness of style. These qualities do not appear in Mr. Ward's effort. The discussion of theory and principles is fragmentary; the broad generalizations so necessary as a groundwork for detailed criticisms and rules of procedure are lacking; and in the historical portions there is a similar lack of the broad, comprehensive presentation of developments, and want of historical perspective. Mr. Ward's style is loose and abounds in faults of grammar and rhetoric, which greatly mar the excellence of his treatment of details. In these, however, there is much to commend. The specific rules laid down, the particular criticisms, the practical suggestions, are generally sound and valuable, and the historical statements generally correct. Much also can be forgiven to so earnest and cogent a pleader for

a wider and better use of color in architecture as Mr. Ward shows himself to be. His closing paragraph confesses the English to be, as a nation, far "behind the French, Germans, and Americans in the encouragement of decorative art"; would that we Americans could conscientiously admit ourselves to be deserving of this compliment! The book is illustrated with thirty-four plates, of which twelve are in color.

An interesting contribution to the history of French engraving in the eighteenth century is "L'Estampe française" (Brussels and Paris: G. Van Oist & Cie.), by François Courboin, curator of the print department of the Bibliothèque Nationale, Paris. The volume forms part of the series Bibliothèque de l'art du XVIIIe siècle, and has a subtitle, "Graveurs et Marchands," which indicates that it is concerned also with the print-sellers of those days. It is not a connected history of French prints of the eighteenth century that the author gives us, but rather a series of interesting chats about his exploration of byways. It is the facts not easily found in the numerous books relating to the subject that M. Courboin has unearthed for our information. Where, for example, he asks, are we to learn "about the practice and theory of the art of the engravers, their traditions, the laws and usages which regulated their relations with the printers, the dealers, the powerful corporation of the booksellers, the Academy, the state?" It is thus the men and their surroundings that he describes. We are told about families of engravers, "ateliers," apprenticeship, collaboration. The various processes in use are described, the eighteenth century being, indeed, a period of experimental processes. There follows a chapter on the business of print-selling (carried on particularly in the Rue St. Jacques), sales, editions, orders, stocks of prints, advertising, printing, proofs, changed plates, counterfeits. The rôle of the state is considered, and that of the Academy. In a word, all is amusing and interesting reading for the lover and student of prints. A number of illustrations help the narrative.

John R. Eyre's monograph on Leonardo da Vinci's "Mona Lisa" (Scribner; $2 net) is an ingenious plea for the authenticity of the "Isleworth Mona Lisa." By a rather tenuous web of circumstantial evidence, it is maintained that there were two genuine portraits of La Gioconda—one, the famous Louvre example, finished in Leonardo's later years; the other, the Isleworth copy, left unfinished. The fact that Raphael's sketch after the Mona Lisa agrees in many respects with the Isleworth version lends a certain color to the hypothesis. On the other hand, Raphael's drawing seems a loose sketch from memory, and no confidence can be set on its general proportions and details, as precisely representing original features of a composition by Leonardo. We have recently examined the Isleworth Mona Lisa, which was loaned to the Boston Museum of Fine Arts, and it would surprise us if this cold and smooth work, with its Poussinesque tree and landscape, were a product of the sixteenth century. It seems merely one of the more attractive copies made in the century after Leonardo's death. Like other copies which come from France, the fantastic background has been toned down to a sort of academic decency. Mr. Eyre's monograph is well printed and sufficiently illustrated.

Finance

THE TIGHTENING FINANCIAL STRAIN IN EUROPE.

Two incidents of the past week, not without a bearing on each other, were the arrival on Thursday of a European steamer with the largest cargo of American securities since last summer, and the announcement of the British Exchequer's much-discussed plan for "mobilizing" American bonds still held in England. Mr. McKenna stated that the Government would offer to buy such securities at the average price of the day, and to pay for them in 5 per cent. Exchequer bonds. It would also offer to borrow them for a two years' term, paying the holder ½ per cent. more than the interest rate of the securities.

It would sell these whenever the owner so desired, and might in certain contingencies do so without his consent; in that case paying the owner 2½ per cent. over the selling price. When asked in Parliament whether the Exchequer intended primarily to sell the securities acquired, or only to use them as collateral on fresh loans raised in America, the Government's reply was ambiguous. It "did not propose to confine itself to either."

This action—of a kind to which no government has ever before resorted—raises some interesting questions. First, this effort at semi-compulsory realizing on the foreign investments of Great Britain means, necessarily, a further step in the present relinquishing of London's primacy in the financial world. Its investments in the outside world have always been the witness to that position. But it equally represents a tribute to the standing of American securities, not only because of the British Government's high bid for them, but because the bulk of English investors must have obviously refused to sell. Had this not been so, the Exchequer's project would not be thought of.

Two further questions concern the probable influence of the operation in maintaining New York exchange on London, and the effect of it on our market. The Chancellor of the Exchequer thought that the outcome of his plan would be to maintain exchange in equilibrium, and he added that any disturbance of American values would be carefully avoided. This would go without saying; the Exchequer would hardly wish to spoil its own market in advance. But even without that fact, our Stock Exchanges long ago made up their minds that the bulk of these English holdings were bound to be sold back. They accepted the fact philosophically—perhaps on the economic ground that we should be redeeming the best of our own investment issues through export of grain and munitions; but even more because of the belief that our markets can comfortably absorb the returning securities.

During the early weeks of the present year it was a common prediction, in the most experienced circles of international finance, that the European war could not outlast 1915. The ground for the prediction was that available resources and economic resisting power would by the end of this year be so far depleted that the war would be brought to an end through the process of exhaustion. The year is already practically over, and the prediction cannot be fulfilled. Yet the grounds on which the forecast was based are turning out not so very far astray, as shown by the public statements of the finance ministers, and, to an extent, in the action of the markets.

What Germany's actual economic situation is, remains still very largely a matter of dispute and conjecture. Except for the subscriptions to last autumn's war loan, and the heavy progressive increase in the Reichsbank's note circulation (that account crossed 6,000,000,000 marks last week, as against 4,230,000,000 a year ago, and 1,890,000,000 at the outbreak of the war), little or no information is obtainable about the Empire's finances. The additional war currency, issued by specially contrived agencies, on loans with personal goods and property as their collateral, did not by any means reach the height of inflation, early in the war, that had been predicted outside of Germany. But the German Finance Minister declared this week to the Reichstag that $400,000,000 of such currency is outstanding.

The sensational depreciation of German exchange in all neutral markets—at New York the American valuation of the four-mark unit fell last week to 75¾ cents, a 20 per cent. depreciation, as against 95⅜ cents parity, and a low level of 80⅜ until this present month—indicates the judgment of the outside financial world. Meantime, the German newspapers themselves are discussing angrily the increasingly critical condition in supplies of necessaries of life to the people at large, and the new war credit of 10,000,000,000 marks voted to the Government this week will bring the annual interest on the debt of Germany nearly up to her total annual public revenue a year or two before the war.

But, if this is the case with Germany, we have England this week planning an unlimited 5 per cent. short loan of its Government at par, as against the preceding long-term issue on a 4½ per cent. basis, and resorting to the hitherto unheard-of expedient of buying with such bonds American securities owned in England, with a view to using them, either for steadying American exchange or as collateral on a foreign loan—a project, the Chancellor of the Exchequer declared to Parliament, which "can only be justified by the absolute necessity" of so employing them.

These things do not mean that either Germany or England is at the end of her financial rope. They do not mean that the war cannot be continued. The attitude, not only of the Governments at the various capitals, but of the banking communities as

well, indicates the contrary. But the unusual character of the situation in both countries, and in the other belligerent states as well, certainly directs conjecture to the two questions, exactly what conditions in all these respects would be created in Europe by another year of war, and just what will be the financial situation, absolute and relative, of the belligerent nations after the war is over. Still, the same apparently hopeless questions were asked about England and Germany during the eighteen years of the Napoleonic wars, and about the United States during the four years of our own Civil War; and the answer of history was different from the expectations of the time.

This week's issue of THE NATION comprises 15,377 copies; of this 8,603 go to paid subscribers and 1,450 go to exchanges or are sent out as free copies. The average weekly newsstand sale during the first eleven months of the year 1915 was 913. November average, 2,122 copies.

In view of the large library and college and family circulation of THE NATION, it is safe to assume that not less than 30,000 people read it each week.

South America and the War

Bolivia has an area equal to sixty Belgiums, yet it has but one-third of the population of the German-seized kingdom.

On the other hand, Germany could be placed into Peru, and there would still be room for Spain, France and Italy.

Of the vast area still unmentioned, we have Brazil, which would have more than 200,000 square miles unoccupied after the United States was put into it.

The vital question at this moment is, will we take advantage of the opportunities flung on us by Fates that have not been so kind to Europe?

The South American is presenting to the people of North America the important news and information about Latin American countries.

The South American will interest you, whether you are in business or not. It will stir your attention and grip your interest with the opportunities it describes, the possibilities it presents, the newly launched projects it announces, and the

Free Spanish Lessons

found in every issue. They are so simplified that the beginner understands without the difficulty arising from complicated study books. Even high school students are finding the Spanish Lessons valuable in conjunction with their language studies.

A Book for Every Reader of THE NATION

THE Houghton Mifflin Company has just published a remarkable book which we believe will be of interest to every reader of The Nation and every other thoughtful person interested in the political, social and economic development of the country for the last fifty years.

The volume is entitled FIFTY YEARS OF AMERICAN IDEALISM, The New York Nation, 1865-1915, selections and comments by Gustav Pollak.

Before preparing this announcement the book was submitted to a man who is a reader of The Nation and a student of American History. We asked him for his candid opinion. Here it is:

"Even were I not interested in The Nation and its unique career I should want to own this book. Because it presents more vividly than any other the history of this country from 1865 to 1915.

"A real picture of a period must be painted at the time. Judicious selections from a non-partisan periodical, of high ideals and literary standards, will best enable young men to see and feel the lives of their fathers, and will best recall to the fathers the happenings of earlier days. What conventional history of this half century could begin to bring its great events before us with such striking reality as do these selections from the Nation?"

These selections are in three divisions, the second of which is "The Nation's Views From Year to Year." It is a rare bit of reading. It is like listening to several wise and brilliant men, of, say, the age of Mr. Choate, and being privileged to hear them talk over the great questions that have arisen since the Civil War. How attractive are such accounts—each tinged with the personality of the narrator. Mr. Pollak has gracefully introduced each "view," so that anyone whose memory is a little hazy is at once able to enjoy them thoroughly.

Then come the "Representative Essays," the very best The Nation has printed. For incisiveness, learning, style, and charm they are unsurpassed in English literature. They form a group of masterpieces which, taken with the rest of the volume, will give the reader more intellectual stimulus and pleasure than almost any other book published within the year. The first of the three divisions of the book is "The Nation and Its Contributors." It is a history of The Nation and its relations with the gentlemen and scholars who have made it.

"The Best Magazine in your Country"
—Henri Bergson

Prospectus for 1916

THE YALE REVIEW in 1916 will publish a series of well-considered articles on the coming struggle in American politics which bids fair to rival in interest the great war. The *Review*, however, will continue its widely quoted essays upon the fundamental questions aroused by the war, and will add thereto more intimate studies of men and events in shifting Europe. In literature and art, criticism of a high order, dealing with contemporary movements of real significance—a field in which *The Yale Review* has specialized—will be given more than usual emphasis in view of the increasing importance of the United States as a centre of intellectual and æsthetic activity. Earlier American literature, in essays upon Emerson by Henry A. Beers and Cooper by James Fenimore Cooper, Jr., will also have especial treatment. As in past years, interest, breadth, authority and good writing will characterize *The Yale Review* for 1916. The late Daniel C. Gilman, Josiah Royce, Gamaliel Bradford, Simeon E. Baldwin, Brooks Adams, Ferris Greenslet, H. N. MacCracken, Ellsworth Huntington, the late Thomas R. Lounsbury, Sidney Bull, A. G. Keller, Hugh Walker, Arthur Colton, Dr. Harvey Cushing, Dr. Richard Pearsons Strong, and many others, will contribute to the fifth volume.

Special Introductory Offer In order to introduce *The Yale Review* to that large number of new readers who want the most distinguished American periodical now published, the above (January, 1916) issue will be sent FREE with a new subscription beginning in April, 1916. Fill in and mail to *The Yale Review* the attached corner coupon, with check or money-order for $2.50. The great success which this new American quarterly has had in enlisting the support and interest of people who know the value of a magazine of this high character in American life, leads the publishers to believe that readers of the *Nation* will become its readers.

Subscribe for Yourself, or send it to your Friends for Xmas.

ORDEAL BY BATTLE

OVER 28,000 COPIES

of this remarkable new book have already been sold.

So great was the increasing demand for Mr. Oliver's book that it became necessary on December 18 to order the printing of a special American edition, similar in every respect to the English edition.

This new edition is now ready

ORDEAL BY BATTLE

can be had to-day at your own bookstore or from the publishers—in time to include it in your list of Christmas books.

***"The Best Book This War Has Produced."*—Theodore Roosevelt.**

ORDEAL BY BATTLE

By Frederick Scott Oliver

"The first great book on the war. . . . **No more readable book, none more enthralling, has for years been written.** . . It deals, and deals worthily and greatly, with the mightiest issues ever known to the world. . . . By one of those rare men in whom hard thinking and clear writing go together. . . . Abounds in personalities and examples. . . . **Alive and luminous;** adorned with portraits, enriched with studies of character and performance."—*N. Y. Tribune.*

"**A big book** and a valuable book. A stirring appeal, able, eloquent, **vigorous and sincere.** Here at last is a man who has a definite thesis to maintain."
—*The New Republic.*

"A rare eloquence and a wealth of illustration which **recalls Burke.** . . . A storehouse of political thought, set down with a precision and an eloquence which have long been absent from the literature of politics. . . . Every page is lit up by some memorable phrase."
—*The London Times.*

"The **most notable book** concerning the war that has yet appeared."—*The Standard.*

"By far the best that has yet appeared. . . . **Contains the gist of hundreds of books,** new and old, and opens up new vistas of speculation."—*London Post.*

"There is not a chapter in this searching analysis of our national strength and weakness which is not **informed by high patriotism** and statesmanlike grasp of causes."—*London Globe.*

"**A strong, manly and determined appeal** to the nation's manhood and common-sense."
—*Daily Telegraph.*

"**A genuine book,** a great and necessary adventure in difficult truth-telling."—*London Saturday Review.*

A BUDGET OF LETTERS

COMMUNICATIONS IN WHICH NATION READERS SPEAK THEIR MIND ON MANY SUBJECTS

An Editorial Preface Concerning "Letters to the Editor."

WITH its second number, that of July 13, 1865, the *Nation* opened its columns to communications from its readers, and from that time to the present the stream of letters dealing with an infinite variety of topics has never ceased. Rather, what began as a rivulet has in the course of years grown to a stream of impressive volume, has indeed overflown its banks and had to be turned into a new channel.

For many years the letters to the editor of sufficient interest or importance to merit insertion in the *Nation* have far exceeded the space that in a paper of limited size could properly be allotted to them. Many have been returned to their senders; many others, after achieving the dignity of type, have languished long in galley form, only in the end to find oblivion in the waste-basket because there was no room for them in the paper. The loss, unavoidable as it was, was unfortunate and was regretted by none more than by the editors, who have always regarded these expressions of opinion from thoughtful readers, writing from various points of view, as among the most valuable and interesting features of the *Nation's* columns.

It is in order that a portion, at least, of this interesting material may not go to waste that we publish the present supplement, which it is intended shall set a precedent for others of a similar character to be published at suitable intervals. What follows represents a selection—for even now it has been found impossible to print half of the material available—from the accumulated letters of half a year. Deliberately, in sign of mourning for past neglect, we have thought it well to omit the date lines. Often the context will betray the belated appearance of the letters, but the intrinsic interest of them, we think, is not affected by the postponement. At any time, for instance, we should find pleasure in the views of Sir George Otto Trevelyan on the reading of Latin as one of the consolations of old age—two subjects, surely, on which none is qualified to speak with better authority or more charm than the writer. Or again, Dr. Marshall's and Prof. Hoernlé's discussion of æsthetics is not less interesting in December than it was in July, when the article that prompted the exchange of views appeared. No moment more than another is to be called "timely" for an unfolding of the delights of exotic Honolulu, and we are very sure that M. Bois would always find a sympathetic audience to listen to his apologia addressed to American womanhood.

To those correspondents of the *Nation* whose communications even the heroic measures we have thought it well to take have failed to save from oblivion we can only make our apologies, begging them to possess their souls in patience and to continue to give the *Nation* the advantage of their views on whatever topics appeal particularly to their interest.

Issues and Incidents of the War

THE DIFFICULTIES OF PEACE.

To the Editor of The Nation:

Sir: When the war is over the nations of Europe will make what will be called peace, but the fact that the armies will be obliged to stop fighting is far from being a guarantee for permanent peace. It is, of course, impossible to foretell the details of the conditions of the treaty which will be made at the end of the war, but it seems desirable to state broadly what are the reasons which render doubtful a permanent and durable peace.

The chief reason may be put in a single sentence. No treaty of peace can be permanent which does not grapple fairly with the question of nationality, and it has hitherto proved an insoluble problem for European statesmen to deal with the actual conditions of Europeon life so as to recognize the claims of nationality without encouraging that clash of interests which in the end brings about war.

Nationality is more frequently discussed than defined; in fact, the difficulties of the question begin with the definition. It is clearly not exclusively conditioned by either race or language, and probably the best that can be said is that men belong to the same nation when they possess either a common tradition as to the past, or a common hope for the future, as to what they will do, or their children will do after them. Nationality thus raises life to a higher plane than that of the family or tribe, but falls far short of unity, so that to thinking men the existence of a world of many nations has at all times been a stimulus to visions of something higher.

In theory, then, the world has long recognized the existence of a higher unity, but unfortunately the numbers of those who have been so dazzled by the vision of a commonwealth of the race as to ignore the just claims of nationality have been about balanced by those to whom patriotism has seemed the final form of human virtue, and between them we have been apt to forget that the problem is neither the extinction nor the glorification of nationality, but its proper adjustment in a larger system.

Nevertheless, the problem has already had a long history. The earliest and the least satisfactory attempt at solution was the method of the Babylonian Empire, which endeavored to solve the problem by eliminating all the nations within the range of its empire, and so to make the surviving Babylonian nation identical with the larger group. It proposed, in fact, finally to settle the question of international relations by having only one nation. The legitimate heirs of that line of policy, with results which have differed one from another only in the degree of disaster which they have met, have been, in

the modern world, Russia and Turkey. The treatment of the Armenians by the one, and of the Finns by the other, are only the last examples, within the range of our own memories, of the way in which they have been faithful heirs of the heritage of Babylon; for Poles, Ukrainians, and Jews in the north, Greeks, Bulgarians, and Wallachs in Thrace and Macedonia, Copts and Syrians in the south, unite in their testimony that the policy of Russia and Turkey has always been the same, even though there has been somewhat less brutality and a little more intelligence in the methods of the northern nation. Both have endeavored to solidify a great empire, composed of many nations, by forcing the nationality of the dominant race on all the others. The experiment is now some five thousand years old, and it has always met with failure.

More recent and as remarkable for its success, when it has been fairly tried, as has been the Babylonian plan for its failure, is the experiment which was started by Rome, and has been carried out by methods which differ only in detail by Great Britain and the United States. Each of these countries has endeavored to respect fully the different nationalities which go to make up the federation or the empire of the whole, and at the same time to prevent the rights of the individual members of the groups from conflicting with the general common good of all. America and England have both made mistakes, both have not infrequently been ruled by politicians who have been ignorant of the real meaning of the tradition of the countries which they were called to govern, and both have committed some crimes, but on the whole they have no reason not to be proud of their attempts to deal with this question. When they have failed, it has been rather from the failure to apply their principles than from any defect that was inherent in the principles themselves.

Germany has for some time seemed to be wavering between a whole-hearted following of the Roman model and a relapse into the errors of Babylon, Russia, and Turkey. Against the treatment of Saxony and Bavaria has to be set that of the Poles in Posen and of the French in Alsace-Lorraine. But some of the recently suggested terms of peace raise the hope that the true Germany—not the Germany which destroyed Louvain and torpedoed the Lusitania and Arabic—will in the end join decisively with England and America and choose to follow the example of the Roman Empire.

One of the good results of this war is the abundant proof that civilization is best and most strongly built up by nations which are united by the enjoyment of local freedom and the sentiment of loyalty to a common heritage of empire which binds them together in groups by chains, which, as Burke once told the House of Commons, "though light as air, are strong as iron bands," while the opposite policy of distrust and coercion defeats its own object, and breaks down so soon as strain is put upon it.

If this were all, one might look forward with considerable hope to the future of Europe after the war, but in at least two districts—Alsace-Lorraine and the Balkan kingdoms—the question is unfortunately complicated by the existence of nationalities which are not separated by geographical boundaries, but are, as it were, superimposed one on another.

The truth is that—if the problem be not utterly insoluble—the one thing which could solve it would be for both Germany and France to step aside from Alsace, and say in effect, "Gentlemen, it is your misfortune that the inhabitants of your country have two nationalities; the triumph of one means the destruction of the other. We will both withdraw; henceforth Alsace is a new country; forget that you have rival traditions as to the past, and learn to have a common hope for your future. That future shall henceforth be neither French nor German, but Alsatian. Though you speak two languages, that need not prevent your being one nation any more than it prevents Walloons and Flemings being all Belgians." Such a policy might succeed, though it is doubtful whether the passions roused in Alsace-Lorraine by foolish rather than bad government for the last forty years could at once be assuaged. The position after the war is more likely to resemble that in Ireland, where, though "strong government" and "coercion" have not succeeded in quenching the Irish spirit, it has so divided classes and districts that a united Ireland is impossible. Moreover, is there the smallest chance that either Germany or France would agree to such a scheme? Certainly not now; possibly after two years more of war if there be a neutral power strong enough and wise enough to make the suggestion in such a way as to "save the face" of both countries.

Equally unfavorable is the outlook in the southeast of Europe. In the Balkan kingdoms the superimposition of nationalities is so complex that it is impossible to see how any permanent organization can be reached. The countries which have already been organized as self-governing entities—Rumania, Servia, Bulgaria, and Greece—have largely succeeded by a process of expelling the members of other nationalities, and many of these outcasts have been collected, though not united, in what used to be the Turkish provinces of Macedonia and Thrace, in which the confusion is made even worse confounded by the fact that the whole of the seacoast is dominated by a large and flourishing colony of Spanish Jews. How is this district to be cleared up satisfactorily, seeing that even small towns are occupied by two or three nationalities all animated by the strongest racial hatred? They may unite in war, but they will always quarrel in peace. It will require a wise and united Europe to control them and to refrain from exploiting them as it has done in the past.

It is for this reason that, although the treaty which will mark the end of the war will possibly pave the way to a general improvement, in that there is at least a chance that a great step will be taken towards the combining of nationalities in larger groups, in such a way that a general policy of home rule will not exclude the central control of common interests, it will probably fall far short of completely solving the question of peace, because both in the west and in the southeast of Europe there are districts in which national distinctions and geographical boundaries do not coincide, and the common hopes which the inhabitants cherish are not for peace in the future, but rather for a successful war of extermination. Unless European statesmen have something better to suggest than any terms hitherto hinted at, we are not in sight of peace at the end of the war, but only of an armed truce.

K. Lake.

Cambridge, Mass.

WHO ARE OUR ENEMIES?

To the Editor of The Nation:

Sir: The question as to whether we are against the Germans or against the Allies seems to have obscured the really more significant one as to whether it is the Germans or the Allies who are against us. Yet it is entirely pertinent to ask which of the two contending parties has shown anti-American feeling and developed anti-American activity. Have the Belgians, the Servians, or the Italians infringed our rights? Hardly. Nor have the Japanese, the Russians, or the French behaved very offensively to us, in connection with the present war. Perhaps, also, it would be fair to say that Turkey, even though a mere tail wagged by the Central Powers, has been only slightly offensive in a direct way. There remain Germany (of which Austria is, after all, a sort of protectorate) and England. Which of these two has shown itself the more disposed to damage us?

England has interfered somewhat with our trade. Let that be admitted. We have lost, by her action, certain dollars. But we have lost no lives, not even of our men, let alone our women and children. And which indicates the greater hostility to another nation: to hold up its trade or to destroy its citizens? This first item on the balance-sheet is a pretty conclusive one. The pro-German has his excuses and extenuations, or even his approval; but here are the facts.

Again, we have not suffered from England any infringement of our sovereignty on our own soil. That has not been questioned by word or deed. We have not had to dismiss any English diplomatic officers. We have uncovered no English plots against our domestic peace; nor yet any attempts to foment external troubles for us. There are no English-Americans asserting their allegiance to an external Power while enjoying the privileges and immunities of American residence or citizenship. There are many Americans who are friendly to England; but these are not hyphenates. The English have shown no disposition to extend a protectorate over us, as Dumba seems to have wished to do. Now comes the pro-German, insisting that there is reason for all these infringements, petty or enormous, in that we choose to go on doing what neutral nations have regularly done—making and selling munitions—or because we do not believe in the German cause. If we are to be persecuted for making and selling munitions, we are being treated as enemies; and if we are to suffer for thinking as we please, we are not free, but in so far vassals.

Spying on other people is not generally considered to be a friendly occupation. Well, the Germans have been spying on us, we now know, in a most thorough, systematic, and efficient way. Have the English done this? And who has spent gold for our discomfort? If the English have succeeded in subsidizing our newspapers, then they must either have found a paltry and scurvy lot of American editors (unless they have put in their own creatures), or else they must have made very serious inroads upon their resources; otherwise they could not have succeeded so well. For, at the rate of expenditures met by the Germans, and to little purpose, in order to enlist the Huertas and others, the British successes, not to ruin the Empire, must have been easily purchased.

What is the sense of playing with facts? Here we have property destroyed, there lives;

here international consideration, there infringement of sovereignty and international insult; here correctness of deportment, there such discourtesy that the offenders must be sent home; here non-interference with our internal affairs, there spying and plotting, disloyalty and the encouragement of the same; here the manners of a gentleman, there bullying, belligerence, and contempt.

Which are hostile to us: the Allies or the Teutons, England or Germany? Which of the two is injuring our national *esprit de corps* and offending our national dignity? Can any dialectics, evasions, or explanations alter these facts? A. G. KELLER.

New Haven, Conn.

TROOPS FROM JAPAN OR HINDUSTAN FOR ENGLAND'S AID?

TO THE EDITOR OF THE NATION:

SIR: With reference to the views of your Japanese contributor on "The Impracticability of Sending a Japanese Army to Europe," published in the *Nation* of November 4, will you allow a Hindu to say a few words?

I am not aware that any one acquainted with the resources of England's mighty Indian Empire has seriously thought of having recourse to distant Japan for troops. It may not be generally known in America that out of the population of 315 millions which make up the Indian Empire, there are in my native land, India, exclusive of male adults of unwarlike races, about sixty million male adults of the fighting races—a number not far short of the total population of Japan and her dependencies—out of which a choice of recruits for this war might be made. If this is going to be a war of attrition, it may be worth remembering that the above figure of sixty millions represents more than double the total number of male adults in the German Empire, and about twice the total number of white male adults in the British Empire. It is not difficult, therefore, to see whether Germany or England is capable of the longer endurance so far as fighting men are concerned, and which part of the British Empire can supply the largest number of soldiers for the longest period, to preserve the prestige of the Union Jack. The native soldier of Hindustan has already stood the rigors of a European winter, has fought with valor side by side with the British soldier in the trenches in Flanders, in France, at the Dardanelles, and elsewhere, has won several Victoria Crosses and Military Crosses, and has often been mentioned in dispatches. Why then need England and her allies consider the question of bringing Japanese troops to Europe? S. M. MITRA.

London.

ROBERT D'HUMIERES.

TO THE EDITOR OF THE NATION:

SIR: May I add to your intellectual necrology of the war the name of Robert d'Humières—a name which ought to be better known than it is to all who are interested in the inter-relations of French and Anglo-Saxon culture? M. d'Humières, who was killed on April 26 of this year while leading his company of Zouaves in the attack on Lizerne, near Ypres, was best known in France as the director of the Théâtre des Arts in Paris, and as the translator of Rudyard Kipling. Though the author of original works also, he is especially entitled to the gratitude of both nations for having made one of the most prominent of modern English writers—and one of the most peculiarly Anglo-Saxon and un-French in spirit—a household name in France. M. d'Humières was a cosmopolitan and a traveller in all lands, but England and her empire had a special attraction for him. He had often visited British India, and had a profound knowledge of it. Not only by his translation of Kipling, but by studies of British Imperialism, such as his book entitled "L'Ile et l'empire de la Grande-Bretagne" (1905), he took rank in that band of Frenchmen who have done so much by their pens in recent years to disseminate a knowledge of British thought and ideals in France, and to remove the prejudices which for centuries have stood in the way of a real *entente cordiale*. When war broke out, M. d'Humières was appointed to what would seem the admirably fitting post of *officier de liaison* in the Anglo-Indian contingent in France. But the spirit which made Kipling's tales of daring and heroism congenial to this Frenchman turned out to be more than a purely literary one; and last March he begged the Minister of War to give him a more active rôle, with the tragic result for Anglo-French civilization recorded above.

The War in Literature

ROMAIN ROLLAND ON WAR.

TO THE EDITOR OF THE NATION:

SIR: A correspondent of the *Nation* has done well to quote Romain Rolland's "Jean-Christophe" in connection with the European war. Surely no recent reader of that great novel can fail to have been impressed with the insight of its author into precisely those national characteristics and ideals—half-grasped hitherto, or wholly misunderstood by most Americans—which have been revealed so strikingly by the present conflict. Unlike Bernhardi's work, "Jean-Christophe" is not conceived in the spirit of prophecy. Yet in chapter after chapter Rolland anticipates subjects of discussion and conclusions which are forced upon us daily. It is surprising that the prophetic character of the work has remained so long unnoticed.

But if Rolland is to be quoted now, the weight of his authority must not be thrown into one side of the scales alone. It would be possible to cull from his pages a formidable anthology of anti-French passages, like the one quoted by Mr. Mendelson. But to do this would be to follow the method pursued by the makers of French readers for the German schools. Your correspondent will doubtless remember that in the case of Jean-Christophe this piece of Prussian foresight failed. "The German editors had selected those pieces of French literature which seemed to establish by the testimony of the French themselves the failings of the French and the superiority of the Germans. But they had no notion that what they most exposed to the eyes of an independent mind like Christophe's was the surprising liberty of those Frenchmen who criticised everything in their own country and praised their adversaries." "I cannot help seeing the arguments of my enemies," says one of the characters, a Frenchman. And so it is with Rolland himself. Not the least admirable quality of his discussion is the intellectual detachment—so rare in these days, even among neutrals—which enables him to see the strength and weakness of both peoples with an impartial eye.

A defender of Germany who calls Rolland to witness has invoked a dangerous power. Against the passage describing the cult of force by a recent sect of Frenchmen, we may put this searching analysis of the alliance of militarism with philosophy and idealism in Germany (English translation, Volume I, page 565):

> They were people who had not the strength to love or hate, or believe or disbelieve—in religion, in art, in politics, in daily life; and all their energies were spent in trying to reconcile the irreconcilable. Especially since the German victories they had been striving to make a compromise, a revolting intrigue between their new power and their old principles. The old idealism had not been renounced. There should have been a new effort of freedom of which they were incapable. They were content with a forgery, with making it subservient to German interests. Like the serene and subtle Schwabian, Hegel, who had waited until after Leipzig and Waterloo to assimilate the cause of his philosophy with the Prussian state—their interests having changed, their principles changed, too. When they were defeated, they said that Germany's ideal was humanity. Now that they had defeated others, they said that Germany was the ideal of humanity. When other countries were more powerful, they said, with Lessing, that "patriotism is a heroic weakness which it is well to be without," and they called themselves "citizens of the world." Now that they were in the ascendant, they could not enough despise the Utopias à la Française. Universal peace, fraternity, pacific progress, the rights of man, natural equality: they said that the strongest people had absolute rights against the others, and that the others, being weaker, had no rights against themselves. It was the living God and the Incarnate Idea, the progress of which is accomplished by war, violence, and oppression. Force had become holy, now that it was on their side. Force had become the only idealism and the only intelligence.

Even more interesting than this is Rolland's insistence on certain essential qualities of French national character which the world has now learned no longer to deny. Christophe has inherited the traditional German view of the French as "a clever people, skilled in practical things, amiable, talkative but frivolous, susceptible, and boastful, incapable of being serious, or sincere, or of feeling strongly—a people of pathos, much gesticulation, exaggerated speech and pornography." And in the first weeks of his residence in Paris he sees much to confirm this impression. Later he learns that the France which he has seen is but the surface. Through the friendship of Olivier he comes to know and admire the true France. "You are all the same," Olivier tells him. "All your countrymen who come among us see only the parasites who suck our blood, literary, political, and financial adventurers, with their minions and their hangers-on and their harlots; and they judge France by the wretched creatures who prey on her. Not one of you has any idea of the real France living under oppression, or of the reserve of vitality in the French provinces, or of the great mass of the people who go on working, heedless of the uproar and pother made by their masters of a day." In the France now revealed to him Christophe discovers

surprising qualities. "Instead of a gay, sociable, careless, brilliant people, he saw men of a headstrong and close temper, living in isolation, wrapped about with a seeming optimism, like a gleaming mist, while they were in fact steeped in a deep-rooted and serene pessimism, possessed by fixed ideas, intellectual passions, indomitable souls, which it would have been easier to destroy than to alter."

In a later passage, describing a war scare, Rolland anticipates some of the most striking lessons of the actual outbreak. The trouble arises from "the insane vanity of German Imperialism, drunk with victory, and the absolute incapacity of German statesmen to understand other races." "The great mass of the German people had nothing at all to do with the provocation. They were shocked by it. The honest men of every country ask only to be allowed to live in peace; and the people of Germany are particularly peaceful, affectionate, anxious to be on good terms with everybody, and much more inclined to admire and emulate other nations than to go to war with them." Under pressure of impending war, all the discordant elements of France fly together; and the friendship of Olivier and Christophe, which they had thought to be established above national prejudice, comes near to disruption.

"Yes," said Christophe good-humoredly, when the storm was passed, "I have seen you all united. . . . It's a fine thing to feel the mighty torrent rushing you along, and the demons that were let loose in your hearts."

"They terrify me," said Olivier. "I would rather have eternal solitude than have my people united at such a cost."

Chapel Hill, N. C.

D'ANNUNZIO AS AN ORATOR.

To the Editor of The Nation:

Sir: The latest book of Gabriele d'Annunzio* is a collection of some fifteen short speeches made in Genoa and Rome in May, 1915, during the days that just preceded Italy's declaration of war. They are all patriotic exhortations to the people to take arms and redeem the provinces of "Greater Italy" still under the tyrannic rule of Italy's traditional enemy. The moment is one of unique historical importance; the speaker is the most famous Italian writer of to-day; what, then, is the result?

D'Annunzio made his literary début as a poet, and it is as a poet, one may venture to say, that he will survive. His novels, noteworthy for their poetic diction, are chiefly interesting for their variedly pictorial digressions. In plot, in solid substance, they cannot compare with those of Fogazzaro. His plays, excellently decorative, at times even powerful, are noteworthy, particularly, for their splendid Italian, but cannot be called great. In his poems, d'Annunzio has shown the best he has to show, and many of them seem to have a beauty, a significance, that may make them permanent, if not popular. For d'Annunzio's poetry is too elaborate, too learned, his subject-matter and treatment too often undesirable, to make for universal appeal. His style is all too often sonorously incomprehensible—which is more a defect than a quality! And exactly such defects mar the eloquence of d'Annunzio as an orator. Lengthy similes, taken from some obscure corner of classical history, involved sentences, the use of words so archaic or so new as to be totally unfamiliar to the average listener, an all-pervading affectation—these are the things that prevent d'Annunzio's speeches from being the epoch-making literary fragments one might have hoped for. One great advantage in these orations is, however, that the very subject naturally precludes anything like the decadent treatment to which we are unfortunately accustomed. And it may be added that though we could hardly expect to find the supremely dignified restraint of a Lincoln, we do find that in these speeches (the most wholesome writing he ever did), d'Annunzio is exceptionally chaste and restrained. Only in one place does he allow himself to descend to vulgar invective.

The value, then, of this book, quite apart from the political influence of the author's eloquence, lies entirely in his patriotism and in his diction. His patriotism, unquestionably sincere, is with him a passion—and passions were ever with him the chief interest in life. His diction, inspired by so noble an inner fire, reaches indeed a high degree of poetic eloquence. Characteristically elaborate imagery fills every paragraph, sometimes as a superfluous ornament to a perfectly simple thought; there is, as usual, an almost sensual abuse of sonorous words; as in all his works, the tone is often subjective. In fact, d'Annunzio felt a prophetic pride in inciting people to a war, then imminent, which he had preached in bold terms before, notably in his Venetian drama, "La Nave" (1908), and in his war poems (1912).

Finally, it is in these speeches that we find, in fine poetic prose, the expression of what is the great underlying feeling of the Italy of to-day: the overwhelming consciousness that she is predestined to a glory which the glory of ancient Rome makes inevitable. It is interesting to note that, at the moment of national crisis, it was a poet who took the initiative, prodding people to war, and that this accepted prophet-orator of the time was d'Annunzio.

Rudolph Altrocchi.

Peace and Preparedness

THE ARGUMENT FOR PEACE.

To the Editor of The Nation:

Sir: The radical advocate of peace may perhaps at times feel impatient that the great mass of citizens are so slow to catch the inspiration of his theme. This failure to respond, however, is due in large measure to the inconclusive character of many of the arguments advanced in support of the peace propaganda. In particular the following points invite attention:

In the first place, it is contended that the way to secure peace is to prepare for it by disarming; and attention is directed to the long, unguarded boundary line between the United States and Canada—the inference being that our peaceful relations with Canada are due to the fact that there are no engines of war on the border. But is not this a case of confusing cause and effect, *i. e.*, is it not rather true that disarmament is here an *effect* of the increasing spirit of fraternity between the United States and Canada and the elimination of possible causes of serious dispute between the two countries?

The correctness of this analysis might be more evident, perhaps, if we should for the moment suppose the situation to be a very different one—that Canada was occupied by a nation diverse in stock, traditions, and ideals; that both the United States and Canada were populated to a point where land hunger was developing; and that a strip of country lay between which each coveted, and which each felt it a point of national honor to secure and hold.

If these were the conditions, our present peaceful frontier would undoubtedly wear a very different aspect. As it is, the two countries are so much at one that thousands of immigrants yearly cross the border, hardly conscious that they are passing from one country to another, and the absence of any questions likely to lead to serious dispute renders it as unnecessary to garrison this border as it is for the individual States of the Union to fortify themselves against one another.

If, therefore, the present condition of the boundary line between the United States and Canada has any lesson to teach, it is simply this: that mutual understanding and common interests and the elimination of possible causes of serious dispute lead the way naturally and almost automatically to disarmament.

In the second place, it is argued that armament is, in and for itself, the ultimate cause of war. This argument presupposes nations living at peace until nation A builds a Dreadnought; then nation B becomes suspicious regarding the intentions of nation A, and builds two Dreadnoughts; this alarms nation A, which builds two additional Dreadnoughts, and so on; finally the suspicion engendered by this competition in armament results in war.

The objection to this argument is that it wholly disregards two fundamental facts: (1) that some among the nations of the earth entertain burning national or racial ambitions that cannot be realized except by the use of force; and (2) that some preach openly, and freely adopt, as their guiding policy, the principle that might makes right. Given one nation of the first class stirred by such ambition and guided by such a philosophy, and rivalry in armament follows as a matter of course; for the neighbors must either submit to aggression or prepare to defend themselves, and they naturally choose the second alternative.

It is interesting to note that even some rather uncompromising advocates of peace—though still demanding, somewhat illogically, immediate disarmament—are beginning to incline to the view that war cannot be eliminated finally except by a process of education that will uproot aggressive national and racial ambitions, establish the principle that right is might, and make every one content to submit to an award of arbitration, even though it is a disappointment. It is hard to understand, however, how even the most ardent advocate of peace can hope for a consummation of this kind in the near future; and, on the other hand, when one views the present turmoil in Europe, the plans of the League to Enforce Peace do not seem to offer any prospect of immediate relief. It certainly would require a large and effective world police force to cope with a situation like the present.

In pushing the peace propaganda, two other

very flimsy objections are raised against adequate preparation for national defence. One is the assertion that so large an army would be required that it would be necessary to resort to conscription. But those who advance this objection seem to forget the great difference between the situation in North America and conditions in Europe. For its inland borders the United States needs no considerable guard; and nature interposes a fortification of some thousands of miles of water on east and west. The harbors of both coasts could certainly be made safe, and an adequate second line of defence provided for, without enlisting an army that would drain the resources of the country or appear to neighbors across the sea to menace their respective countries.

The other objection is based on financial considerations. We are informed that any adequate plan for national defence would cost too much money, and the prudent householder is warned that "taxes would go up." Stated thus bluntly, this argument has a rather sordid look. It appears in a more respectable guise when we are told what good use could be made of the money that is now spent on military equipment and pensions—how we might endow colleges, extirpate tuberculosis, etc. But this matter can be viewed from a very different angle. The *Nation* has recently pointed out that the United States spends more money annually for chewing-gum than it does for school books. If we need a larger appropriation for education or sanitation, why not begin the retrenchment with chewing-gum rather than with the national defence?

IS THERE DANGER OF A JAPANESE INVASION?

To the Editor of The Nation:

Sir: There have been frequent and strong assertions that there is such a probability of a war between Japan and the United States that to prepare as speedily as possible for any emergency is an urgent necessity. Such an event is so utterly impossible that it is not worthy of serious consideration. And the reasons are these:

There is no such disposition on the part of the Japanese people. Some irresponsible jingoes may try to stir up trouble, but they do not represent the thinking and ruling classes. Writing on this subject, the editor of the *Japan Mail* (who was an ex-officer in the British army) said: "Before engaging in a war with America, Japan would have to divest herself of the strongest sentiments of friendship which are entertained towards any foreign country."

The Hon. Shimada Saburo, the editor of a leading daily paper in Tokio, and one of the most prominent men in the Diet and politics, writes: "These rumors that Japan may attack and occupy the Pacific Coast are absolutely without any foundation in fact, and will be proved baseless in time. Such an attack would be suicidal. The United States is the greatest buyer of Japanese goods, and she does not propose to ruin all this trade by making a foolish attack that would be foredoomed to failure."

At a meeting of the leading American residents of all professions in the city of Yokohama, the American Ambassador said: "There is no cause under the sun why there should be distrust between the people of Japan and America. I think that the idea that Japan is a blood-thirsty nation, that wants territory and war with United States, is being gradually worn out, and the idea of suspecting our neighbors will be a thing of the past." Resolutions condemning the rumors in question were unanimously adopted.

The war between Japan and China, and also the one with Russia, were not brought about by Japan's seeking. Had either China or Russia been willing to accept reasonable terms of adjusting differences which had arisen in the administration of affairs in Korea, the whole trouble would have been settled without resort to arms.

Should there be any change of feeling at this time, or in the future, on the part of the Japanese towards the United States, such a thing as a war is impossible for the following reasons:

The whole area of Japan proper is less than that of the State of California, and only one-fourth, or less than the area of New York State alone, is under cultivation.

The wealth of Japan is only one-half of that of the State of New York.

The total population of Japan is about 60,000,000 and that of the United States 111,000,000.

The national debt of Japan is greater than that of the United States, and more than one-half of this sum is money borrowed from abroad. Her wealth is less than one-twelfth.

The average income of the Japanese is $30 per capita. The average income of residents of the United States is $250.

Less than one per cent. of the farmers in Japan own twenty-five acres, and 90 per cent. less than one acre. The rent is often 60 per cent. of the crop; and the average peasant must pay as much as 20 per cent. interest.

The ordinary taxes amount to about 10 per cent. of the income; and to this is added the special income tax, which runs from 1 7-10 to 26½ per cent.

No other country in the world is carrying so heavy a financial burden in proportion to its strength. The ordinary revenue of Japan, according to latest report, was $259,849,000. The ordinary revenue of the United States was $734,673,000. The total expenditure for army and navy in Japan for 1914-15 was less than $100,000,000. The expenditure for the United States army alone was $94,000,000.

The *Kokumin Shimbun* (a Tokio daily paper) says: "The heavy debts of Japan are more than the nation can endure." Baron Shibusawa, who is one of the ablest financiers in Japan, says: "The present rate of taxation in Japan is indeed extremely high, and more than the people at large can bear."

At the close of the war with Russia, the new Cabinet proposed a considerable enlargement of the navy, in order to be prepared for a possible renewal of the struggle, but the people protested so strongly that the Cabinet resigned, and the result was a change in the programme and a large reduction in the appropriation for that object.

The Diet which met last December refused to sanction the increase of the army by two divisions, and a new Diet was chosen before such additional expense was approved. This approval was secured for the simple purpose of establishing the Monroe Doctrine for the protection of China, and with no idea of inaugurating a war of aggression against the United States.

Japan is largely dependent upon the United States for a market for her produce. Her chief articles of export are tea and silk. The United States takes practically all of her tea that goes abroad, and the larger part of her silk. The latest report of silk exported to the United States gives the amount as $100,900,025 value of raw silk, and $39,936,000 manufactured silk. The value of tea sent to the United States was $16,735,000.

According to latest statistics, Japan has seven Dreadnoughts and sixteen battleships and a force of 42,407 men (not counting reserves). The United States has ten Dreadnoughts and twenty-two battleships and a force of 85,965 men, or more than double that of Japan.

To conduct an aggressive war against a nation with about double the population, with twelve times the financial strength, possessing a more powerful navy, and at a distance of from 4,800 to 6,000 miles from its base, is a project that no sane person would consider. Hawaii is too well fortified to be taken by any such force as Japan could send, and is 3,900 miles distant from Japan and 2,400 from San Francisco.

"Calm Lights of Mild Philosophy"

BOSANQUET'S ÆSTHETIC.

To the Editor of The Nation:

Sir: By a happy coincidence I was reading Dr. Bosanquet's "Three Lectures on Æsthetic" when Dr. Marshall's most interesting review of them in your issue of July 29 appeared. There is nothing so instructive and enjoyable as to check one's own impression of an important book by the judgment of an acknowledged authority on the subject. But I was somewhat dismayed to find that the points in Dr. Bosanquet's analysis of the æsthetic experience which presented difficulties to me were not mentioned by Dr. Marshall at all, whereas in most of those points which Dr. Marshall criticises I was inclined to think Dr. Bosanquet right, or very nearly right. I have no claim to speak on Æsthetics with the authority either of Dr. Bosanquet or of his critic, but as a humble student, trying to learn from them both, and finding myself much more closely in agreement with Dr. Bosanquet on the points at issue, I should like to urge, for what they are worth, some considerations which appear to me to tell in favor of the position which Dr. Marshall attacks.

I will summarize what I take to be the substance of Dr. Marshall's argument, and I will do so in my own words rather than in quotations, in order that Dr. Marshall may judge for himself how far I have caught his meaning. Dr. Marshall, I should say, offers three criticisms of Dr. Bosanquet's central formula for the æsthetic experience, viz., "Feeling expressed for expression's sake." Without keeping strictly to the order of Dr. Marshall's review, I shall put his argument as follows:

(1.) Dr. Bosanquet's formula is too wide, because feeling expressed for expression's sake is not necessarily beautiful (consider the tyro's failures). In other words, Dr. Bosanquet's

definition fails to hit off the specific quality of beauty, because it covers both good and bad art, and bad art is not beautiful.

(2.) The formula is too narrow, because not everything that is beautiful is feeling expressed for expression's sake. In other words, Dr. Bosanquet fails to account for the difference between beauty in art and beauty in nature, which cannot both in the same sense be treated as "expressions" of "feeling." For in so far as there is "expression" in nature, in so far as there is some hidden meaning revealed there, the expression "can only appeal to one who assumes the attitude of observer," whereas in art "expression" means that the artist puts his feeling, or rather his conception, into his work. It is the difference between man expressing his æsthetic ideas in the things he makes, and the expression in nature of something which has not got its source in man and which man can only guess at.

(3.) The third criticism continues the second in applying even to art the "radical distinction" between the artist who "creates" beauty and the observer who merely "perceives" it.

At bottom, the whole issue comes down, as Dr. Marshall by implication acknowledges, to a conflict between two opposing schools of æsthetic theory concerning the proper scope of Æsthetics. Dr. Marshall wants a theory of the "quality of beauty to which the average cultivated man refers when he uses the word æsthetic." Dr. Bosanquet offers him a theory of the æsthetic experience which covers beauty and ugliness and sublimity, nature and art, good and bad art, the spectator's enjoyment and the artist's creative rapture. Dr. Bosanquet begins with an analysis of the experience of beauty, but he uses the insight so gained as a clue to the nature of æsthetic quality in all its other forms and manifestations, and because he thus traces a *single character* throughout the whole field, he is accused of "failing" to make certain obvious distinctions. Dr. Marshall, pressing for the recognition of these distinctions, hardly makes it sufficiently clear that the whole importance of Dr. Bosanquet's theory depends precisely on his going behind these distinctions in his search for the common character of all forms of æsthetic experience.

In this conflict I feel inclined to side with Dr. Bosanquet. Not that I write as Dr. Bosanquet's prophet. I have no inside knowledge by which to interpret him. Whether he would accept my interpretation of him I do not know. I have nothing to go on except his words as tested by my own experience, such as it is. But so far as I can analyze my experience correctly, it seems to me that, if Dr. Bosanquet distinguishes too little, Dr. Marshall surely distinguishes too much. It is no service to Æsthetics to insist on the difference between spectator and maker to a point where their common occupation with beauty becomes unintelligible, or to contrast good and bad art so sharply that one almost forgets that bad art is still art. The case of beauty in nature and in art is especially instructive. It is easy to paint the difference between the making of beautiful objects by man and the finding of them in nature. But so far as they are both beautiful, what is the relevance of that distinction? It has a right to enter into consideration only so far as it affects their beauty, *e. g.*, in the sense in which Dr. Bosanquet argues that the beauty of art stands higher in the scale than the beauty of nature. Apart from that, what common ground is there, æsthetically speaking, between natural objects and art objects, if not that in each case the definite structure and quality of the object, as experienced by us, evokes some degree and kind of the characteristic æsthetic feeling? The feeling, as the *Einfühlungstheorie* rightly appears to hold, fuses with the object in its concrete quality, so that in this sense it may be said to be "expressed" or "embodied" in the object. In so far as the whole experience of the object thus felt and "lived in" by me as an embodiment of my feeling is stable, complete in itself, and satisfying with a certain finality, we may speak of "expression for expression's sake."

A good test-case for the justice of this view seems to me to be a painter inspired by his perception of a beautiful landscape, or a beautiful face, to embody them in a picture. Or, again, we might think of the way in which the story of Romeo and Juliet inspired Shakespeare. At what point here is the break between perception and creation, or between beauty of nature and of art—a break such as to forbid us to say that the work of art, compared with the original, evokes the *same kind* of experience only in an intenser and purer form, or that the painting and the drama are a continuation, through the manipulation of color and of language, of a creative activity of the imagination which entered already into the original perception? Dr. Bosanquet's remark (p. 7) that "in creative art the production is as it were a form of perception; it is subordinate to the full imagining, the complete looking or hearing," seems to me entirely true to experience, even where the artist gets his first inspiration from nature, let alone the "non-imitative" arts, like music. The essential point is that "creation" does not begin only with the manual execution, after the conception is complete in the artist's mind, but that it begins with the first impulse, whether received from perception or otherwise, and continues right through the elaboration which the "conception" undergoes in the very process of being "expressed."

It is in the light of the statement just quoted that I should interpret the further statement that "the spectator's attitude is a faint analogue of the creative rapture of the artist." The spectator is, so to speak, an artist at a lower level. Though his experience is determined by what the work of art offers him, it is yet creative. He owes his perception of æsthetic quality to an activity of his imagination exercised on the materials offered. The differences between what two spectators will, as we rightly say, "make" of the same work of art are as great and as characteristic as the differences between what two artists will "make" of the same subject. Roughly speaking, what is given in a work of art or an object of nature, *i. e.*, what we all alike perceive, so far as we perceive non-æsthetically, is much the same. The degrees of æsthetic enjoyment, the amount of beauty seen, as between one man's experience and another's, depend on how much each can bring to bear on the given object, how much each can feel into it and receive back from it as its revelation.

In conclusion, I will add two minor observations. First, it is not merely "probable," as Dr. Marshall says, that Dr. Bosanquet would be "the first to acknowledge that his metaphysic cannot be said to aid the artist"—it is certain, for Dr. Bosanquet tells us so explicitly himself. The function of Æsthetics "is not to prescribe rules for the production of beauty or for the criticism of artists' work" (p. 2). Dr. Bosanquet's position here, whether right or wrong, is entirely consistent with that which he maintains in the analogous cases of ethics and logic. The aim is theory, not rules for practical application.

Secondly, it is scarcely a happy suggestion on Dr. Marshall's part that Dr. Bosanquet is inclined to look upon the critic's attitude as a "higher synthesis" of the attitude of the spectator and that of the artist. The passages on pp. 35 and 36, on which Dr. Marshall relies, do not seem to me to bear out his reading. Dr. Bosanquet's point appears to be simply that you cannot be a good critic unless you have yourself as full a range as possible of æsthetic experience, for "the imagination itself is necessarily very sensitive to checks and failures in its efforts after satisfactory form" (p. 35). This sensitiveness is at the root of all criticism. One might express this point by saying that the best artist is the best critic, provided he is capable of reflective analysis of his experience.

R. F. Alfred Hoernlé.

Cambridge, Mass.

To the Editor of The Nation:

Sir: Dr. Hoernlé's criticism of my study of Dr. Bosanquet's Æsthetics is welcomed by me as one of the "humble students" of this difficult subject.

It appears to me that Dr. Hoernlé's attitude is affected by the current recrudescence of "romanticism," and this may well lead us to pause. No one can complain that I fail to recognize the significance of "creativeness" in experience. Indeed, I have often feared that I might be thought to be a camp follower of Rousseau; one of those *amateurs du délire*, of which French critics speak. But it seems to me that this is a time when we should use every endeavor to see straight in this regard; and the theory presented by Dr. Bosanquet does not appear to me to aid us to this end. Dr. Hoernlé, indeed, would seem to accept the thoroughly romantic theory of *Einfühlung*, which Dr. Bosanquet and I join in rejecting; and I may add that, in my view, the grounds for this rejection are fundamentally the same that lead me to find Dr. Bosanquet's theory unsatisfactory.

The need of clarity of thought in this matter is made evident when we note that Dr. Hoernlé asks us not to forget that "bad art is still art." Yes; it is art in the sense in which we speak of any work of skill as art—bootblacking may thus be called an art. But it is not fine art unless it yields beauty. Bad art in my view is non-æsthetic. So far as I can see, every form of self-conscious activity may be stated in terms of Dr. Bosanquet's "feeling expressed for feeling's sake"; but only some of it involves the æsthetic attitude of the artist, and only some of its resultants yield the sense of beauty to the observer.

I find myself so thoroughly in sympathy with both Dr. Hoernlé and Dr. Bosanquet in their appreciations of beauty that I am led to ask whether there is no other theory which more satisfactorily "covers beauty and ugliness and sublimity, nature and art, good and bad art, the spectator's enjoyment, and the artist's creative rapture." If "covers" is taken to mean "explains the relations between," I think we have what we look for in the hedonic theory of Æsthetics which I have defended elsewhere. Art is "higher" than nature, so far as it gives us a more permanent form of beauty. That it may do so is doubtless due to the fact that the artist through selection enables us to gain a concentration of interest. I, of course, agree that part of this interest may be due to a dim sympathetic appreciation

of the artist's attitude; but I doubt the fundamental importance of this "empathy." I cannot believe that it can account for the very wide recognition of the beauty of certain works of art among peoples whose appreciation of the artist's creative attitude must be all but totally lacking. I do not think that such a "spectator is an artist at a lower level."

Perhaps we may hope to hear directly from Dr. Bosanquet in regard to the final point made by Dr. Hoernlé, where he thinks I have misunderstood the author.

HENRY RUTGERS MARSHALL.

New York.

Latin as a Living Tongue

SIR GEORGE OTTO TREVELYAN ON THE CONSOLATIONS OF OLD AGE.

TO THE EDITOR OF THE NATION:

SIR: When reading your Educational Number of recent date I was much impressed by the sound and original views in the letter headed "A Suggestion for Humanizing Elementary Latin." Your correspondent protests against the custom of introducing a boy to the Latin language through the medium of Cæsar's "Commentaries" and Virgil's "Æneid"; and expresses his own preference for selecting other authors, and notably Plautus. On this subject I can speak from the experience of a very long life, in which Latin and Greek have been a priceless, a permanent, and an increasingly valuable possession; and I have the vicarious advantage of knowing the feelings of a relative who was perhaps the most ardent reader that the world has produced.

On the question of Julius Cæsar I write without prejudice. I eagerly read everything about him, whether in Cicero, Sallust, Catullus, or Suetonius; and his brief letter, enclosed in the sixteenth epistle of the ninth book of the letters to Atticus (commencing with the words "recte auguraris de me"—) I regard as among the most lofty of human compositions, on a level with Abraham Lincoln's address at Gettysburg, and with Edmund Burke's speech from the hustings at Bristol on the 9th of September, 1780. But, when a boy, I found Cæsar's "Commentaries" dry and unattractive. It was quite otherwise with Livy's History, which I read with delight, many pages, and at last whole books, ahead of our appointed task. That in itself is not a certain proof that the love for a book will last, for I did the same with Fénelon's "Télémaque"; but, in the case of Livy, I like him all the better for having liked him sixty-five years ago. In these terrible times I have read him with strange emotion, fortifying one's mind with the memorable example of Rome's most critical and glorious years, and sometimes even for a while distracting one's thoughts from our own patriotic efforts and anxieties.

It was the same with Macaulay. During the years 1837 and 1838, when he was compiling the Indian Criminal Code and founding the Indian Educational System, he read Livy twice through at Calcutta. It was in the course of those readings that he first conceived the idea of "The Lays of Ancient Rome." On the margin of his Livy, opposite the story of Horatius, he writes: "This is the true Chevy Chase style." Opposite the account of the Battle of Lake Regillus he writes: "This fine story of a battle comes, I have no doubt, from some old national poem"; and, at the death of Virginia in the Third Book, he says: "An incomparably beautiful and pathetic story." His comments, as Livy's book grows from legend into history, become more critical, frequent, and far longer and more detailed; and they form at last something of a supplementary history of Rome by the side of Livy's narrative. At the close of the decade relating the Second Punic War, he writes: "Here ends a finely written, though most careless and partial, narrative of the most extraordinary and interesting war in ancient history. My admiration for Hannibal has been prodigiously increased by this account of his actions, unfriendly as it is to him."

The most important part of your correspondent's letter refers to Plautus. The comedies of Plautus are a supremely good introduction to a knowledge of the Roman mind and of the Latin tongue. The style of Terence—the favorite author of Julius Cæsar—is exquisite; but it is a vehicle for Attic manners and Attic feeling, perhaps as beautifully and purely expressed as in the original Greek. Plautus, on the other hand, is Roman to the core; and a true reader of Plautus has it never absent from his thoughts that he is reading the Latin which was spoken at Rome in Rome's heroic period; that he is listening to plays which were acted with vast applause before audiences full of men who had fought under Marcellus and Claudius Nero in the Second Punic War, and that he is present at familiar conversations couched in the very talk of Lælius, and Scipio, and the elder Cato. It is the same deep and almost mysterious fascination which we find in Chaucer and Herodotus—the English spoken by the men of Crécy and Poitiers, and the Greek spoken by the men who remembered Platæa and Thermopylæ.

Macaulay went through Plautus, in India, five several times in three years—disappointed with him on the first reading, as compared with his undergraduate recollections of him at Cambridge, but relishing him more and more at each successive perusal. It is idle to canvass the respective merits of very great writers. They belong to a class where, thank heaven, there are no competitive examinations. But no man need be ashamed if he prefers Plautus to Ben Jonson or to Congreve; and (to come to one special performance), if he reads the "Menæchmi" and the "Comedy of Errors" in close succession, without feeling that Plautus loses by the juxtaposition.

On one point my own taste does not coincide with that of your correspondent. I cannot set Petronius in this high company. To me there is something about him sickly, faded, fantastic, and unreal; and I do not class his book with "Tristram Shandy," or the "Autocrat at the Breakfast Table," or "Gil Blas," or "Gulliver's Travels"; and (for that is more in his own line) I regard him as a hundred miles below "Lavengro" and "The Romany Rye."

GEORGE OTTO TREVELYAN.

Wallington, Northumberland.

"DEAD" LANGUAGES.

TO THE EDITOR OF THE NATION:

SIR: It is a well-known habit of us apologists of the classics to fly into a rage when we hear Greek and Latin called "dead languages" by the enemy. We rant and shout in a loud voice, or in italics, that they are not dead, that they are just as alive as English, for instance, of which the modern form differs more from Chaucer's English than does modern from ancient Greek, and that Latin also lives in its descendants, French, Italian, etc.

Have we not here, in our zeal, gone a little too far and excited ourselves quite uselessly? Have we not even, in these arguments, descended to most unworthy quibbles? For the enemy could easily retort that, if what we say is true, they are perfectly willing, *a fortiori*, to throw Chaucer's English upon the junk pile too, and that the liveness of offspring allows us to draw no inference as to the deadness or the opposite of the parent. Of course, the argument that it is useless to study Greek and Latin because they are dead languages is a fallacy. But the fallacy does not lie in the validity of their major premise. Greek and Latin are undoubtedly dead, in the sense in which these people take the word. And why deny it? They died long ago—Greek, at least, for the western world—and were even buried and forgotten, but, like the mammoth found frozen and almost perfectly preserved, but dead nevertheless, in the icefields of Siberia, they have been exhumed and have given us a glimpse of bygone ages. Yet they are preserved by artificial means, and it is by no means inconceivable that, if the interest in this preservation should die out, the comparatively scanty remains that we possess would go the way that their fellows went a thousand or more years ago. The mistake that our opponents make is not that they call Greek and Latin "dead," but that, when they have done so, they think that they can rest their case. Greek and Latin are condemned by an epithet.

The minor premise of the enemy, if they went to the trouble of formulating one, would be, I suppose, "All dead things are useless"—a rash statement that any coal baron could refute, if the ultimate source of his wealth were pointed out to him, or any freshman of any medical school. To refute it in the case of Greek and Latin is not my province and has been ably done by others. My purpose in writing this is merely to warn teachers of the classics not to be afraid of the epithet "dead," but to accept it, and not to be ashamed to write over the door of their classroom the verse that the above-mentioned freshman finds, in Paris, I believe, over the entrance to his anatomical laboratory:

Hic locus est ubi Mors gaudet succurrere Vitæ.

ERNEST RIEDEL.

New Orleans.

The Chinese Monarchy

VIEWS OF A REPUBLICAN.

TO THE EDITOR OF THE NATION:

SIR: Putting on one side the question whether the republican form of government is fit for China or otherwise, I am going to point out some important events that happened in our country after the establishment of the republic, and try to show what President Yuen has done since then.

The revolutionary movement in China has been greatly developed since the year 1900. It was because of the corruption and the rottenness of the Manchu dynasty and the aggression of the foreign power that the Chi-

nese people began to see their weak points in the political, economical, and industrial world. Our national heroes died one after another, not only for the purpose of destroying the Manchu dynasty and selecting our own king, but for the establishment of the republican government and for the liberty of our four hundred million people. So that there was no dispute about the form of government when our provisional government was first established at Nanking on January 1, 1912.

Dr. Sun Yet-San was then the Provisional President of our republic at Nanking, and Yuen Shi-Kai was the Premier of the Chin dynasty at Peking with the full power of taking charge of the peace negotiations between the two Governments. At first Yuen disagreed upon many points which were brought out by the representatives of the Provisional Government, and the negotiation was almost broken off. But owing to the terrible bomb which was given to the Premier Yuen on January 16, 1912, when he was on his way to the royal palace, he, although not killed, began to realize the danger of his position and the popular inclination of the people. Therefore the negotiation was resumed. The final result was reached on February 12, that the King of the Chin dynasty resigned from his throne; that the Premier Yuen was intrusted to cooperate with the Provisional Government to establish the greatest republican government of China, including the five different races of the Chinese people. Yuen then telegraphed to the Provisional Government and expressed his deep appreciation of what the revolutionists and the Provisional Government had done, and said how he admired the principle of democracy and what great honor he had in coöperating with the Provisional Government for the greatest good of future China.

On February 13 President Sun delivered his resignation to Tsang Chin Yuen, which was assembled on January 28, and composed of representatives from different provinces, because he had sworn during his inauguration that he would resign from the Presidency when the monarchy was destroyed and the republican government was formed. He offered his resignation because he trusted Yuen's power and ability of uniting the whole country. He went to Tsang Chin Yuen and delivered an address concerning the present condition of the country, and his recommendation for Yuen to be the next Provisional President. On February 15 Tsang Chin Yuen was assembled for the election of the President. Yuen was elected. His inauguration was held at Peking on March 6. Since then the Provisional Government has removed to Peking, and Tsang Chin Yuen has continued to do duty as a legislative body.

Mr. Tong Shou-Yee was first appointed by President Yuen as the Premier of the Provisional Government. According to the Provisional Constitution, which was drawn and verified by Tsang Chin Yuen, the Premier was responsible to the President. It follows, therefore, that every order issued by the President must be signed by the Premier. Yuen never got accustomed to such restriction, he began to dislike it. Therefore there were a good many disputes between the President and the Premier. Finally, Tong Shou-Yee resigned from his office owing to the fact that the President Yuen appointed a man to be the head of a commission to investigate the condition of the army in the South without the approval of the Premier. Since then, till the opening of the National Assembly, the Premier has been changed three times and the policy and administration were by no means carried out.

Mr. Tong Shou-Yee, the first Premier, was an influential member of Kong Min Dong, which was a political party, and the majority of the members of which were the members of the secret society under the Manchu dynasty. Dr. Sun was the leader, and several provincial Governors belonged to that party then. After Mr. Tong Shou-Yee had resigned from his office, realizing the approaching danger of the republic, Kong Min Dong began to work its influence through the people, expecting its majority in the coming National Assembly. Fortunately the result of the election gave Kong Min Dong its majority in both Tsang Yee Yuen (the Senate) and Chung Yee Yuen (House of Representatives).

Immediately after the opening of the National Assembly there was a great and unfortunate happening which aroused the suspicion between our Government and the people. It was the assassination of Mr. Sung Chao-Yin. Mr. Sung Chao-Yin was a man who was active in the revolutionary movement, was an able and practical politician, was a strong believer in party government and in responsible Cabinet system, and, above all, he was an influential member of Kong Min Dong. He explained his belief in the provinces along the Young-tsee River. After the election for the members of the National Assembly was disclosed, the people, owing to the fact that Kong Min Dong had its majority in the Assembly, began to believe that Mr. Sung Chao-Yin was going to be the next Premier, and he was going to organize a strong, responsible, and party Cabinet. On March 20, of the year 1913, he was shot at the Shanghai and Nanking Railway station at Shanghai on his way to Peking. The whole country was aroused and most believed that it was due to the political struggle. The murderer was arrested, but died in the jail shortly after. After a careful investigation, the witness told us that the murderer had close connection with the Premier at that time, Chou Pin-Cheung, and his secretary. The District Court at Shanghai wanted the Premier and his secretary to come to Shanghai, but they did not, and they were still working in their office.

Shortly after the assassination of Sung Chao-Yin there was an unconstitutional action taken by our Government. It was the Five-Powers loan. According to our Provisional Constitution, to make a loan or to make a treaty with a foreign country we must have the consent of Tsang Yee Yuen.

The assassination of Sung Chao-Yin made the people, or at least Kong Min Dong, think that the murderer had connection not only with the Premier and his secretary, but also with President Yuen Shi-Kai. The Five-Powers loan was not justified by the National Assembly and the majority of the people. Therefore the three Governors who belonged to Kong Min Dong began to show disobedience to the Government; they were Governors of Kiang-si, of Ngang-whai, and of Kwong-tung. President Yuen removed them, and they submitted. But Yuen still suspected the soldiers of Kiang-si, so he sent continually his trusted soldiers there. The result was the conflict between two sides of soldiers, and the so-called Second Revolution broke out. The majority of the people, being tired of war and being not recovered to the normal economical, social, and industrial condition after the first revolution, were not in favor of this revolution, so the trouble was easily crushed.

Immediately after this trouble the question of election for the first President had been raised. The question whether the adoption of the Constitution should precede the election of the President or the election of the President should precede the adoption of the Constitution had been discussed for a long time in the National Assembly. The final agreement was reached that the Constitutional Committee, whose members were elected from the members of the National Assembly by majority vote, should first make out the method of electing the President; that the election should take place after it was ratified; that the adoption of the Constitution should be after the election. On October 6, 1913, Yuen Shi-Kai was elected as the first President of the Chinese Republic. The election was held in Chung Yee Yuen (House of Representatives) from eight o'clock in the morning until nine at night. There were thousands of soldiers lined up around the House. They did not go until Yuen was elected. One of the Japanese newspapers said that it was the first time in the history of the world that the President of a republic was elected by the interference of soldiers.

After the President was elected, there were serious disputes between the President and the members of the Constitutional Committee. Logically, the President has no power over the making of the Constitution, but Yuen sent eight persons to attend the meeting of the Committee. At first they were refused, but finally they were admitted. The first important point the Constitutional Committee was going to emphasize was to limit the power of the President by the adoption of a responsible Cabinet system. The persons who were sent by Yuen to attend the meeting wanted to express their opinion concerning this point, but they were refused. The following day, October 25, President Yuen telegraphed to the Governors of different provinces expressing the impossibilities of the new Constitution and wanting their opinions. Then the Governors, Generals, and Captains began to discuss the question of the Constitution. Most of them could not point out how the new Constitution was going to do harm to our country, but they favored the dissolution of the National Assembly, the dismissal of Kong Min Dong members in the Assembly, and the rejection of the Constitution by the President. Most people would, I think, wonder why the Governors, Generals, and Captains favored such a violent action to be taken by the President. To understand this, I must mention that since the Second Revolution has been crushed out, Yuen's supporters have filled up these places. They did not care what the country did, but they did care about the prospect of their master and of their own future. On November 4, President Yuen issued an order dismissing the members of Kong Min Dong in the National Assembly; even those who did not belong to Kong Min Dong then, but belonged to that party before the Second Revolution, were also dismissed. Since then our National Assembly could not meet because of lack of a quorum.

Since then even the form of the republic has disappeared. Yuen could do what he wanted to do. A State Council, which is composed of Ministers and representatives from the President, is what he supposes to be the legislative body. Every sensible person would realize that this body cannot represent our people.

People who are not well informed on China will say that China has been a monarchical government for thousands of years; that the Chinese people are peaceful and obedient; therefore it is better for China to return to her monarchical government, for there will be no dispute over the election of the President. Do the Chinese ignore the development of modern democracy? Do the Chinese obey the unjustifiable order? If the Chinese do, how could we start a revolutionary movement, how could we succeed in destroying the Manchu dynasty, and how could we succeed in establishing a republican government? People say that the republican form of government is not fit for China. How could they know? We never had time enough to try it. Our government has been no longer a republic since Yuen became our President. If Yuen is going to make himself Emperor, I believe that China will never quiet down. Those who are liberty-loving people will continue to fight year after year. Although they cannot succeed at present, they will certainly succeed in future.

In Praise of Honolulu

THE GLOW FROM THE CRUCIBLE.

To the Editor of The Nation:

Sir: The great outstanding fact about Honolulu—the fact without reference to which no visitor's dinner speech or tourist's letter to home would be complete—is that of all cities of the Pacific, perhaps of the world, not one is more cosmopolitan. Almost before the *malihini* (newcomer) has stepped from the gangplank he is impressed by the variety of complexions, features, tongues, and costumes which are to be noted. It is merely a matter of hours until he will have employed the rather hackneyed but indispensable phrase, "the melting-pot," in reference to life at the cross-roads of the Pacific.

Last summer a full-blooded Cherokee Indian, a genuine, war-whooping, paint-bedaubed aborigine, with gorgeous war bonnet and beaded moccasins—Chief Hailstorm by name—resided for a few weeks in this city. Each night he gave a lecture and an exhibition of Indian dances in connection with moving pictures of Uncle Sam's Indian wars. Following each performance he solemnly assured his audience that however civilized he might eventually become he should always remain "a true son of the prairies." This is the single instance on record where any one has avowedly declined to fuse with the other elements in this insular crucible. Perhaps, had he remained, he, too, might have fallen victim to the influences which enable white, black, brown, and yellow men partially to lose sight of their racial characteristics and to live harmoniously and, to a degree, sympathetically in the "Isles of Peace." Only the tinge of red is lacking in the island color scheme. It is said that only a few Indians, of the Siwash tribe, live in the vicinity.

There is no reason to believe that Utopia has been attained in Honolulu. No one need accept any opinion that this community has proved conclusively the possibility or desirability of the general intermingling and association of races. For aught one may know forces are at work to demonstrate the reverse of the present picture of harmony. The melting process has not as yet been sufficiently long-continued to permit conclusions. But it is true that the instruments and the materials essential to Nature's experiments in racial association have for a considerable period been present here, and that no results distressful to a broad-minded observer are as yet apparent. And in the present time of universal unrest many persons may find satisfaction in contemplating the fact that in one neighborhood many races live without undue strife. The fact is especially significant when it is considered that the community embraces such widely different peoples as the Hawaiians, the Portuguese, the Chinese, the Japanese, the Koreans, the Filipinos, the Porto Ricans, the Negroes, and various Caucasian nationalities; all of which are represented in considerable numbers among the approximately 60,000 residents of Honolulu.

Many factors are involved in the fusion of these heterogeneous elements. The schools, the churches, the press, various industrial and commercial interests, social and fraternal organizations, and the police court are, of course, concerned in the establishment of common interests and common ideals. But in addition to these, there are at work three agencies, easily to be overlooked, but not on that account to be underestimated, towards like ends. Moreover, they insure an American bent of mind for the rising generation. They are: Baseball, moving pictures, and popular music.

The general popularity of baseball as a sport, and its widespread appeal to non-participants as a spectacle, are nowhere more apparent than in Honolulu. The game is said to have been introduced in the Islands by Major Thurston in 1885, and it may be supposed that cocoanuts were at first used for balls. There were during the last summer Japanese, Chinese, Hawaiian, Portuguese, and Filipino teams in the field, besides the various American civilian and army clubs. There is also a crack organization representing a negro regiment.

The Chinese Travellers, a Honolulu team, recently returned from a long and successful tour of the mainland, a tour which terminated at faraway Havana—another insular stronghold of the national pastime. Japanese players from the Meiji University in Tokio visited here to participate in an International League schedule last autumn. About the same time representatives of the Japanese Athletic Club of Honolulu were playing baseball in the Flowery Kingdom. College teams from California, Stanford, Chicago, have played on local fields during the last two summers, all finding first-class competition.

"Pat" Page, the celebrated coach, after his stop here with the Chicago University team en route to the Orient, wrote: "The entire community [of Honolulu] back their teams with more enthusiasm than any place in the world. . . . Honolulu is just like Chicago. Every sandlot is filled with 'Skinnays' learning the game."

Interest in the world's series reports is quite as intense as in many mainland cities. Large crowds representing all nationalities assembled each morning at nine to read the bulletins. An instance of the deep interest is provided in the fact that a Chinaman, in response to a general invitation from the *Star-Bulletin* sporting editor, correctly guessed the batteries to be employed in the opening game of the 1915 world series—an attempt at which many an expert failed.

Perhaps even wider in its appeal locally, in that both men and women are interested, is the moving picture. It is in the picture theatres that one literally "rubs elbows" with all nationalities. The "movie fan" may turn during a lighted intermission to find that he is seated beside a Hawaiian lady in a beltless, loose-flowing "holoku," as the characteristic native dress is called; or shining coat and pantaloons may indicate a Chinese neighbor. Perhaps the neighbor is a Japanese, kimono-clad, sandal-shod, with the picturesque "obi" on her back, or her husband with a Toyo Panama in his hand. For in the numerous picture theatres of the city all congregate to watch the "Perils" or the "Exploits" or the "Adventures" or the "Hazards" or whatever else the lurid posters outside may have announced. And the philosophically inclined should rejoice that the same little ladies of the screen who crowd the theatres in the most sophisticated mainland communities are likely to produce the same effects in so cosmopolitan and isolated a place as this. Many of the three dozen theatres here are of the tin-wall, open-roof type, so that the moon, stars, and clouds play parts of their own in the "island nights entertainment."

A recent contributor to the *Photo-Play Magazine* enthusiastically writes: "If you can call Honolulu, as they do, the 'melting-pot of the races,' then surely it is the moving picture that stirs it. In all this intermingling of races, nationalities, civilizations, and centuries the one plane where they all meet, the one thing that crosses all lines, is the moving picture. It is the only thing that they all share, the only thing they all enjoy."

The real "joy of life" here is to be found in the park on moonlight nights, when, the landscape properly swabbed with light, the royal or cocoanut palm fronds appropriately silvered and barely aflutter in the tropical breeze, one lounges about while the native Hawaiian Band is at work. Maybe Japanese boys will be playing tag through the crowd, and surely there will be children tumbling on the grass. The syncopated efforts of American song-writers are much in vogue in the band programmes, and a lonely one may feel the gentle pangs of "home, sweet home" as he hears the tunes which are inevitably associated with lyrics about corn fields, cotton fields, midnight choochoos, ragtime bands, dear ole Broadway, or other peculiarly American institutions.

Another evening the band is not playing. A stranger sits alone beneath a banyan tree. After a while a group of Hawaiian boys—perhaps a Portuguese among them—strolls by. Some of them carry guitars, others ukuleles. They are singing native songs well known on the mainland, and popular songs of the "States" better known here.

Or there may be an even queerer association of music and musician. Perchance, as happened once, a little Chinese boy, native-born, will again pass by chanting of a "Girl in the Heart of Maryland."

Such an incident gives the listener a renewed sense of the American idea; it inspires a feeling of patriotism which he hopes is shared by all the odd folk of the "Paradise of the Pacific." It is the glow from the crucible!

HARRY W. FRANTZ.

Honolulu, T. H.

Educational Topics

THE EFFECT ON A UNIVERSITY FACULTY OF ARBITRARY DISMISSALS.

TO THE EDITOR OF THE NATION:

SIR: The reaction of myself and my colleagues to a case of sudden dismissal that we regard as absolutely unjustifiable suggests the query as to whether such action contributes in any way to the efficiency of a university. A man who had brought his department from notorious feebleness to a model state, who was most highly regarded in every respect by all of his fellows, was suddenly at the summer meeting of the board given a year's leave, told that his services were no longer required, and his successor appointed. No warning was given and no hearing permitted. The first occasion, so far as is known and suspected, was the jealousy of a colleague, better known for belittling the work of others than for his own achievements, whose interference in the control of the department in question had been checked by the man dismissed. The second more openly alleged reason was a vigorous expression of opinion on matters connected with his department to the governing board. These were particularly resented by one man who has assumed a dominant position on the board. One must expect to suffer much while the method of choice puts absolute control of universities into the hands of men who can have little knowledge of educational matters and no academic ideals. In this respect, our board is probably better than the average. Nevertheless, a word from the inside on the effect of government by whim for the personal satisfaction of members of the board may guide other bodies in similar cases.

I felt the matter as a personal blow. I lost a night's sleep, and for the rest of the summer, whenever any university matter was mentioned, I at once thought of the dismissal with a feeling of depression, followed by bitterness that continued for a longer period than I care to admit. The wish that I might find another place or that there might be some way of removing the cause or even getting even played an unethically large part, and I am not an intimate of the victim and am in no way directly affected. The effect was universal. Men remarked that we had fallen upon a comic-opera régime, in which any difference of opinion was to be settled by "off with his head." There was talk of spies, an intimation that one might be struck from the dark without warning, and that no one knew who would go next, and repeated wonder if one had by any chance given offence to the supreme power. The atmosphere was that of Russia. As men returned this autumn they were greeted with, "You were lucky to escape the emotional strain of the summer," or, "I did not write you about Y as I did not care to spoil your summer." Similar expressions, coupled with violent condemnation of the men responsible, were heard on all sides.

Obviously, the effect of such a state upon the individuals and upon the institution must be bad. The actual loss of time and the decrease in capacity for work are considerable. Respect for the men in authority is lost, and enthusiasm for work and loyalty to the institution greatly diminished. Worst of all is the growing belief, often subconscious, that advancement and even retention depend upon truckling and wire-pulling rather than upon actual merit and accomplishment. Here, as in so many institutions, there is no open way in which faculty opinion may be expressed upon appointments and promotions, and many of the essentials of policy. Occasional private conferences, some even more questionable influences, give the board what little light they get on the attitude of the members of the teaching staff. Punishment of the kind inflicted encourages toadying much more than honest expression of opinion. As the men of standing and ideals are less likely to resort to these methods than the politicians, the influence of that class, whom we have always with us, is bound to increase.

Opposed to these disadvantages, the only gain is that the member of the board may feel that he has taught the man his place and that he will no longer be irritated by having a man about who will not instantly agree with him. He may also be gratified at his success in getting even. In this case the method was less humane, even physically, than the conventional bludgeon or sawed-off shotgun of the Black Hand. Against this must be put the discouragement and mental depression, not to mention the curses, of scores of the men upon whom, after all, the strength and reputation of the university depend. X.

A HINT FROM TUSKEGEE.

TO THE EDITOR OF THE NATION:

SIR: In connection with the revelations in "A Bombardment of Unfortified Brains" in your issue of December 9, the following may be of interest: In Booker Washington's school for negroes at Tuskegee there is a blackboard in the hall, which all the students pass constantly, and the latest news is written on it so that all can read at a glance. In addition, after the opening exercises of the school, before the pupils scatter to their various classes, half an hour is given for current events, each class in turn having a morning on which any member may be called on to report some important recent occurrence. Half the time is given to the reporting; the other half to criticism from any student of the accuracy of the reporting, and of the English in which it was given. The pupils read the news when they can, one little boy pleading in excuse for a slight inaccuracy that "the big boys had all the papers." The reporter is expected to tell the situation of any place mentioned, the position of any person, etc. The half-hour is most interesting and informing. When a visitor on one occasion was shown through the printing office, a slip was taken from the press as a specimen of the printing. Reading it, the conductor said: "Ah! I did not know of this! To-night is one of the rare free evenings for the ——— class, and their Literary Society is to hold a debate. Would you like to hear it?" The visitor was amazed that evening. The Russo-Japanese War was going on. Papers for each side were read by a boy and a girl, and then discussed. Surprising appreciation of the situation of both belligerents was shown. All was intelligent and graphic. "It is wonderful," said the amazed visitor. "Encyclopædia," said the host, with a twinkle. "But all was so up to date." "The papers—but they have very little time for reading."

Our "superior race" must bestir itself energetically if it is to keep ahead, and might not the Current Events blackboard and half-hour be introduced into our schools and colleges with advantage? Surely current events touch one's "life work" more closely than the sporting news. S. H.

Philadelphia.

DAILY THEMES AND COLLEGE DEBATING.

TO THE EDITOR OF THE NATION:

SIR: When Mr. Foster and "An Undergraduate" make their complaint about vicarious thinking in our institutions of higher learning, they are deserving of public gratitude. There are few men possessing an unbiassed mind or a retentive memory of their own undergraduate days who would venture to defend the intellectual standards of our undergraduates. The cult of vacuity in academic halls is too brazen to be overlooked. The dangers of originality are too great to be faced by any young man at the outset of his "college career."

But the causes for this ailing are not to be found solely in luxurious fraternity houses, or professionalized athletics, or even in stupid and unsympathetic instructors here and there. Modern educational methods have done more harm even than modern plumbing to the undergraduate mind. I recall at least one New England college where not so very long ago men dwelt together for the most part in the most unexceptionable discomfort, and yet political conviction, religious faith, and intellectual standards were as unusual as if every man had had his own motor car and shower bath.

It is not fair to blame the plumber and the steamfitter and the subsidized quarterback for what is more the fault of deliberate systems of instruction than anything else. I do not venture to cover the whole field of iniquities wrought by the so-called elective system. But I should like to comment on two forms of abuse common in, and peculiar to, the modern American college. I refer to them because Mr. Foster appears to take them as matter of course.

The first is the writing of themes. The second is debating. These evils are best studied in their most virulent forms—daily themes and intercollegiate debating.

Mr. Foster complains of the college girl who, "when asked to write a description of a sunset, applied to the librarian at once for a book on sunsets." But he does not criticise the instructor who made the requirement. It ought to be an insult to any high-spirited man or woman between eighteen and twenty-two years of age to be required to write a description of a sunset. And yet college instructors go on exacting daily themes in this same stupid way. The daily-theme course in our colleges compels men to turn out day after day all sorts of themes on required subjects. The aim of these courses is to teach style and command of language. The American university has not yet comprehended that style is simply the apt expression of an idea. As such it is obviously a by-product of the idea. We spend infinite labor in our theme courses on style, but none on ideas. We expect the mill to produce fine meal and forget that no

good grist has gone in at the other end. We permit our undergraduates to feed their minds on the lowest forms of current periodical literature and then expect them to write like Addison or Montaigne, by compelling them to compose daily essays on sunsets. The result of these courses is that people who are capable at their best of writing good spelling and punctuation and tolerable grammar indulge themselves in the grossest of literary vices, emotional insincerity. Can any one imagine a man in Oxford, or Göttingen, or Grenoble being seriously invited to write a theme on sunsets, or oak trees, or campus buildings, or any one of the thousand things that are compulsory in our colleges? The wonder is that a man can escape these treadmill servitudes with the slightest tincture of personality; and certainly very few do escape without a lasting hatred of literary composition in any form.

But the college debate is, if anything, a more devitalizing and devastatingly pernicious influence. The interscholastic, interclass, or intercollegiate debate is unoriginality made competitive. Debating is properly the alternate advocacy of two opinions. In college it is a game played by teams, like football. The teams are coached for the "big debate," just as the football team is coached for the "big game." The three most docile students "make the debating team." When they have made the team, they go to work with redoubled energy under the coach. When their fleshly brothers become giants of physique on meat and prunes, they are strengthening the mental sinews on statistical almanacs and volumes of the *Congressional Record*. The evening of the big debate comes. There are three judges, generally two neutral professors and a lawyer. By a supreme effort they listen to the debate and keep a tabulated record of points according to some arbitrary schedule. Ultimately they announce the victorious team to the accompaniment of well-modulated applause. The audience is generally exiguous. In small colleges, freshmen are frequently required to attend. Nobody in his right mind wants to listen. The unforgivable thing in a debate is to make an "unsupported assertion." If a debater says, "I believe in high protection," it is as bad as a fumble. The other team is sure to score five points. What the debater should say is, "We of the affirmative shall endeavor to show you that high protection is for the best interests of the nation. Senator So-and-So, in a speech [which in fact was never made and never would have been listened to if it had been], at p. 922 of volume such-and such of the *Congressional Record*, said, etc., etc. The statistics of Uruguay show that, etc., whereas the statistics of Portugal, etc., etc." It is easy to satirize, and it is hard to write temperately. The man who wrote for six points on the affirmative was nothing out of the ordinary and would never be penalized in the game as it is played. It is precisely as though he had written to a reputable coach and said, "Send me six good skin-tackle plays for the championship game."

College debating is the worst possible training for public life. The college debater is playing for points to the judges. If he makes an "unsupported assertion," all is lost. Woe be unto him if his adversary has been more thorough with Poole's Index. "A recent writer in the ——— which the gentlemen of the negative have overlooked, has observed, etc.," and the heads of the gentlemen on the negative droop with shame across their water tumblers. It may be true that all this is some training in logic, and that to lose two points from the judge for an undistributed middle or an illicit minor makes men more careful with their syllogisms. But is it not a thousandfold better that men should battle with their own good wits to secure the confidence and approval of their fellowmen than that they should struggle for a judge's points by the citation of the opinions of politicians or eminent experts?

In the famous Union Society of Oxford, which has been in some sense the mother of the Mother of Parliaments, every member has an opinion on the subject of debate and voices it either in a speech or by his position in the lobbies at the end of the speaking. In an American debate no auditor has any opinion except that it has all been an intolerable bore. At the Oxford Union you will hear crimes in the name of logic that might turn the hair of an American debating professor gray in one night. But you will also hear real conviction, sound unrhetorical sense, and manly purpose. These are things that the debating coach in America makes impossible. I do not believe any American with the forensic training of an American university ever achieved honorable success in public life without consciously rejecting all that he ever learned in these "debating teams."

Those who devise our curricula and form our educational ideals have been building on false ground. The mischief is not in the debater, but in the debate. The American undergraduate is undoubtedly satisfied with predigested food. But in the majority of cases it is because his instructors compel him to partake of it and scold him for a nibble of ripe fruit. If our undergraduate is the victim of false contentments, let us shoulder the blame ourselves for fostering those very contentments. This is not the affair alone of college faculties. It is for the educated man whatever his profession. ROBERT HALE.

Boston, Mass.

The Eternal Feminine

M. BOIS ON THE AMERICAN WOMAN.

TO THE EDITOR OF THE NATION:

SIR: The American press was very friendly to me during my recent visit to the United States, and ably seconded me in my mission, which was to present the underlying reason which linked your grand republic with our own. I knew before I put foot on your soil that you Americans feel a sincere sympathy for us French, and my aim was to make it clear that this mutual amity was based on ideas, ideals, and common interests.

In fact, I care so much for the good opinion of the American press that I have been considerably disturbed by frequent reports in your papers that in my next novel, "The Woman Who Killed," I declare that the American woman, especially the grande dame, is incapable of love. Now, as this book is not coming out until January, it seems to me that it would be rather out of place and above all premature for the author thus to pass judgment on the American woman. Indeed, presented in this bald form the statement would be simply a monstrosity, and what is more, would not be true. I have never said nor written any such thing. On the contrary, having proclaimed in my lectures and interviews that I consider the American woman to be "the hope of the future," it would be absurd for me to hold that this woman was inept to manifest, in its noblest form, a sentiment which is the most beautiful of all sentiments, and which, furthermore, is supremely feminine.

Far from pretending or even conjecturing that the American "super-lady" is unable to love, I will show in "The Woman Who Killed" that my heroine, an American, attains to a love so complete and so profound that, in order to experience the sensation, it is not necessary that the beloved one be present and living; she is bound to him even more closely than is the widow to the dead husband, her affection is like the vows of the nun. I make it plain that there is no love comparable to her love, more elevated, purer, and more profound, though the road this exigent soul had to follow in order to attain her end was long, painful, and tragic—a road darkened with doubt and pride which rendered the victim, in spite of herself, shockingly cruel.

The fact is that the grand American lady is placed in a very peculiar position by the circumstance that she enjoys a liberty, a prestige, a refinement of education which embraces somewhat the whole world through the influence which is exerted by beauty, physical and mental culture, travel, large acquaintanceship, contact with all that is of a high intelligence, and a knowledge of all that is interesting and beautiful. She is, in a word, a queen, an idol.

In a lecture that I delivered in the drawing-room of Mrs. Charles B. Alexander, I said to the American woman: "You are an idol; be a goddess; that is to say, do not keep for yourself alone this splendor which ends in you. Be a benefactor and beware of the double trap of selfishness and pride by which a man in your position would be sure to be caught."

It is inevitable that such a personality, favored with every kind of gift, of birth and lot, would be apt to feel that she was a magnificent prey, and a cruel clairvoyance would be awakened in her which might become so acute that it would finally turn into a perpetual doubt—she would never believe herself loved for her own sake, as do most ordinary women. Her heart would become blasé, at least in appearance, for nothing is so baneful to love as an excessive refinement of the interior being, and that sort of intoxication caused by an atmosphere of flattery and perpetual homage. Whoever is so affected is lost. But this is much less the fault of the individual than of society, and of the much too courtesanesque character of the relations of men with women who possess everything to please. Incense was the perdition of the despots of old, and it is the poison which awaits the dominatrices of to-day and to-morrow.

The grand ladies of America, who are already and will be still more so in the future almost an irresistible power, need to make the most intense and constant effort in order not to lose those qualities which are displayed more easily in the case of women of a more modest or of an average condition—devotion, love of sacrifice, fruitful pity—without which there is no real complete love.

I who am an admirer of the American woman, I who believe that it is in the United States that the superwoman is to appear, that she is even now on the point of appearing—I have felt that I should not imitate the great

body of men who overpraise her, but, what is better, while admiring her, tell her, at the same time, the truth, which is that every human being, and especially woman, is not made for ambition, domination, that "the will for power," as Nietzsche has said, should not be developed at the expense of the other faculties. Above all must not be smothered the instinct of love, goodness, simplicity, tenderness, pity—these noble qualities which are concentrated in the word Humanity. Yes, men and women, we should be human, and women should be even more human than men. Every suffering thing should feel that woman can be counted upon. She it is, therefore, who should especially not cause any suffering. Let woman develop her body, cultivate its strength, its elegance, its beauty. Let her make of the soul a rare wonder. But none of these should be developed at the expense of the heart.

Paris.

Literary Criticism

THE AUTHORSHIP OF "NICHOLAS FREYDON."

TO THE EDITOR OF THE NATION:

SIR: Referring to the review of "The Record of Nicholas Freydon" in the *Nation* of July 15, it seems curious that there should be supposed any "mystery" at all about the authorship, as the book broadly and with evident intent tells us itself. See page 291, middle: "I began to write my fourth book. The third—a volume of short stories of mean streets," etc. Obviously, this is Arthur Morrison's "Tales of Mean Streets," 1894—on page 296 the period is called "the early nineties"—which was, in fact, his third, though "Who's Who" calls it the first. The others were "Shadows Around Us" (1890), and "The Fate of Fred Lavers" (1893). Further proof is plenty. Mr. Morrison was a journalist like "Nicholas Freydon," and while a cadet of the great Morrison house of merchants and collectors (since become a collector himself, by virtue of their double inheritance) would not have to live in such squalor, his work and interest made him long an expert in the submerged classes, with as little enthusiasm for them as Nicholas. Still more, the book gibes at Nicholas for calling a job as correspondence clerk in a mercantile house a "secretarial appointment." Now in the earlier issues of "Who's Who" (1905, etc.) Mr. Morrison is said to have had a "secretarial appointment" before turning journalist.

FORREST MORGAN.

Hartford, Conn.

"LA BELLE DAME SANS MERCI."

TO THE EDITOR OF THE NATION:

SIR: I have read with pleasure Mr. O. W. Firkins's keen analysis of the reasons why the Imagists are not Keatses and Shelleys. If they would only grant that the magic of speech that is pure music is beyond their reach, I, for one, should enjoy more their "Cyclists" and "Coal Pickers" imaged in "lengthened curves."

But my concern now is with the stanza of "La Belle Dame Sans Merci." I cannot subscribe to Mr. Firkins's explanation of its strange beauty because the variation he makes it dependent on—an unexpected anapest in the fourth verse—is in but four of the twelve stanzas, all of which are to my ear equally perfect.

I have always thought that the description of this stanza as iambic misses entirely its rhythmic character. All other poems in iambic tetrameter are entirely different. Take, for example, these three stanzas by Wyatt, Cowper, and Coleridge, respectively:

> Forget not yet the great assays,
> The cruel wrong, the scornful ways,
> The painful patience in delays,
> Forget not yet.
>
> And still to love, though prest with ill,
> In wintry age to feel no chill,
> With me is to be lovely still,
> My Mary.
>
> I told her of a knight that wore
> Upon his shield a burning brand,
> And that for ten long years he wooed
> The Lady of the Land.

Allowing for the variations in the fourth verse, are they not more or less alike, and quite unlike Keats's stanza?

> O what can ail thee, Knight-at-arms,
> Alone and palely loitering?
> The sedge has withered from the lake,
> And no birds sing.

Trying to account for this difference, I have analyzed Keats's rhythm as follows: Each octo-syllabic verse falls into two parts, which are about equal in time, though one contains five syllables and the other three; the rhythmical unit of each half is the three-syllabled amphimacer, as in *woe-betide.*

> I met a lady | in the meads,
> Full beautiful—a | faery's child,
> Her hair was long, her | foot was light,
> And her eyes were wild.|
> . . . . .
> And no birds sing.|
> . . . . .
> On the cold hillside.|

That is, the secret of the rhythm is in the trisyllabic phrases on which the poem is built: "Knight-at-arms," "loitering," "woe-begone," "beautiful," "faery's child," "manna dew," "woe-betide," "elfin grot," "sojourn here," etc. If the poem makes this rhythmical appeal to other ears than mine, are we doing well to pigeonhole the stanza as iambic tetrameter and dimeter? If the labels of verse-technique were less mechanically applied, the Imagists, I venture to say, would be less deceived in regard to the restrictions of rhythm. There is in English no finer example of the triumphant freedom of a real poet working within the limits of a traditional form than "La Belle Dame Sans Merci."

ELISABETH T. COOLIDGE.

Chicago.

RECORDS OF AMERICAN SHIPMASTERS.

TO THE EDITOR OF THE NATION:

SIR: On page 488 of your issue of October 21, we read that a second book like R. H. Dana's could not be written now. That is quite true, but another could be *published* now, which never was published except in the local papers of Gloucester, Mass., where it exists in scrapbook form. It was written for his wife by a retired shipmaster of that town, one of four brothers who were sailing for Boston firms in the thirties, and in a way it supplements Dana—notably in the account current in the South Seas of the fate of Dana's notorious captain.

He left his father's farm at the age of twelve, to sail as cabin boy under his oldest brother. He regrets his lack of early schooling, but he came of good family, and the style is simple and lively, almost as good as Dana's, while the incidents are far more varied, occurring in the course of eighteen voyages to the Baltic, the Mediterranean, South America, China, and round the world.

His experiences at sea and in port are all entertaining. At Cronstadt he met at dinner John Randolph, of Roanoke, just arrived as United States Minister to Russia on a United States man-of-war. Mr. Randolph thought he had made a record passage, but Capt. Low produced a newspaper taken the day he left port, proving that his passage had been shorter.

He describes parties at Messina, and rides and drives at Rio Janeiro. At Manila he dined at the house (of a distant relative of the writer's) which had mother-of-pearl window-panes, "admitting the light and keeping out the glare." He dined with natives in Sumatra (on curried chicken and rice, "cooked much as you would cook it, but hotter; and it is surprising that the hotter it is, the better it quenches thirst"), and returned to New York to find the waterfront so completely burned out that he could hardly find a wharf to discharge his cargo.

This was before the Astor House was built, and we find the sea captains foregathering at "Bingham's."

All these men wrote well, being exceptionally well-bred, well-read men. Much of such material survives in the collections of the Essex Institute at Salem, awaiting an interested editor.

HELEN MANSFIELD.

Bloomington, Ind.

BURCKARD'S DIARY.

TO THE EDITOR OF THE NATION:

SIR: The completion of the new edition of Burckard's famous diary* directs attention anew to one of the most naïve records of a very interesting period of Italian history.

Burckard, whose name appears in Latin as Johannes Burckardus, was a native of Haslach, near Strasburg, and was born in the middle of the fifteenth century. As a young man he studied law, and in 1477 bought the citizenship of Strasburg, where he remained until the year 1481; then he removed to Rome. He soon obtained the post of apostolic protonotary, but this did not prevent him from carrying on a busy law practice until 1483, when he became master of ceremonies at the Papal Court.

Sixtus IV, Innocent VIII, Alexander VI, Pius III, and Julius II, though as unlike one another as ever men were, all united in loading Burckard with favors, conferring rich benefices upon him, and enabling him to live in his house in the Borgo with all the style and luxury of a Prince of the Church.

Burckard seems to have been of an easy, accommodating nature, and could always find some kindly, human thing to say of even the most hardened villains. He relates how a thief once broke into his fine house in the Borgo, and was caught in the act of making off with the best plate and jewels. Burckard would not allow him to be arrested, but bade him begone "to the devil, who would punish him according to his deserts."

*Johannis Burckardi Liber notarum ab anno MCCCCLXXXIII usque ad annum MDVI. Edited by Enrico Celani. Published in parts (1906ff) forming two volumes in the series of Rerum Italicarum Scriptores.

The Master of Ceremonies was a shrewd man of business, too, and when the Lady Abbess of Hohenburg got into pecuniary difficulties, it was Burckard who was sent by the Pope to audit the accounts of the convent, consolidate the mortgages which encumbered it, and settle the good nun's financial affairs—all of which he accomplished to the entire satisfaction of Pope and Abbess. He met most of the crowned heads of his age and made friends of them, for as Master of Ceremonies he welcomed all distinguished visitors to the Papal Court and bade them god-speed on their departure. It is said of him that he loved good food, and especially good drink, and to this was due perhaps the gout that brought about his death, in 1506.

Burckard's diary begins in 1483. Sixtus IV was Pope, an old man of seventy, who died just as the diary begins. Like other Popes, before and after, Sixtus was abandoned by all his favorites as soon as the breath had left his body, and so systematic had been their plundering that the only vessel Burckard could find in which to wash the body was a kitchen cauldron used for dish-washing, while for lack of a towel the poor Pope's shirt had to be torn up to dry him.

Next came the pacific Innocent VIII, during whose pontificate a strange visitor arrived in Rome. This was the Turkish Prince Djem, brother of Bajazet II, who, having escaped from the murderous emissaries of his brother, had fallen into the hands of the shrewd d'Aubusson, Master of the Knights of Rhodes, and had by him been sold to the Pope. Djem was destined to live in the Vatican far into the pontificate of the Borgia. He dressed always in Turkish costume, kept his eastern harem, received ambassadors from his royal brother, and grew marvellously fat in his captivity.

Pope Innocent soon died, and Alexander VI came to the throne in 1492. The diary takes on a new complexion with this year, becoming more anecdotic and hence more interesting. The many-sided Borgia here appears as an authority on highly technical matters of ritual and cult—a phase of him which rather surprises one. At this time Burckard was sent upon a political mission to the Aragon Court at Naples, and he made an archæological pilgrimage to Agnano, the Solfatara, Baia, Pozzuoli, and other environs of Naples. Stormy days were approaching, with the descent of Charles VIII of France and his army. The Pope sent the suave and diplomatic Burckard to meet the King, who took advantage of the opportunity to ply the Master of Ceremonies with all manner of questions "for about four miles."

Charles died in 1498, and soon after him Savonarola, whose career is summed up by Burckard as it appeared to a lawyer and diplomat at the Papal Court. It is a curious view of the great preacher, but one that merits attention. The death of the Duke of Gandia is related at length, with every circumstance known at the time, and yet, though the author treats this subject boldly and gives us chapter and verse for a certain Vatican orgy in 1501, he is unprejudiced enough to give us also a picture showing the magnificent courage of Alexander VI when threatened by shipwreck. The Borgia, however, was nearing his end, and in midsummer of 1503 he died. Burckard performed the last rites for his black and bloated body, and the sodden mass that had been God's Vicar was laid away in Saint Peter's with the imposing ceremonial of the Roman Church.

Of the edition of the diary by Celani one can speak only in terms of praise. There is now for the first time available for students a complete text, carefully revised from the original manuscript. So great is the human interest of the diary, however, that at the least the more interesting portions might well be made accessible to English readers in a translation.

EDITH ANDREWS.

Capri.

"ARMAGEDDON" AND "PARADISE LOST."

TO THE EDITOR OF THE NATION:

SIR: The admirers of "Paolo and Francesca" and "Herod" will probably derive little but disappointment and regret from Stephen Phillips's latest effort, "Armageddon"; yet to the student of literary history the work is by no means without interest. All readers will agree, however, that the Prologue and Epilogue, which are laid in Hell, are the most significant parts of the drama. The Prologue is patently imitated from the debate between Satan and his followers in the second book of "Paradise Lost." There are similar demoniacal conferences in "Paradise Regained," but these are briefer and less impressive, and it is possible that Mr. Phillips never read them. In the Prologue to "Armageddon," as in "Paradise Lost," the principal speakers are Satan, whom each poet pictures as seated on a throne from which he rules with despotic sway, Beelzebub, Moloch, and Belial. The similarity is not merely a matter of names, however, for each of Mr. Phillips's fallen angels preserves the character he had in the Puritan epic, and Belial even keeps his deferential, oily manner of speaking. As in "Paradise Lost," the sentiments of this sensuous, ease-loving spirit are delivered immediately after those of Moloch, to which they are somewhat opposed. Belial's address begins thus:

> O Lords, I scarcely know, if now I rise
> In order, to address this full conclave,
> I, Lord of Lies; nor would I seem to slight
> The ancient, grand prerogative of Force.

It is always illuminating to watch the suitors for literary fame attempt the bow of some earlier Ulysses, and accordingly "Armageddon" is worth reading simply for the heightened appreciation it gives of the greatness of its original. For Mr. Phillips's pandemoniac council seems talky and futile in comparison with that of Milton. There is no debate, no clash of opposing opinions; Satan simply announces what is to be done, Moloch rejoices at the news, and Belial and Remorse speak apparently for the pleasure of speaking. Furthermore, Milton's intensely real Satan has degenerated into a dull abstraction, and his subtle, imaginative, and poetic Belial receives such lines as:

> With deference I propose that I convey
> To Earth my swollen, bilious Bureau. . . .
> Great Landlord, I complain not, but of late
> I feel through crevices a draught of truth. . . .
> The thought provokes a spiritual sweat. . . .
> Again then I submit, I play my part.

There is little or nothing in this blank verse to indicate any influence from the style, diction, or prosody of "Paradise Lost"; yet the following lines will show that "Armageddon" is not without the inversions, the appositives, the use of adjectives for adverbs, and traces of the organ tone which distinguish Milton's work.

> Spirit, to me alone inferior. . . .
> In action is the bread of mutiny. . . .
> But the main field and region of grand war
> Disputed lies, an indecisive plain. . . .
> Splendid is Force, but solitary falls
> And self-defeated, unrelieved by lies.

The most surprising feature of Mr. Phillips's drama, however, is its unconscious revival of a device once popular in narrative poetry. During the eighteenth and the early nineteenth centuries, the stereotyped formula for the "machinery" and plot of the epics which were then the vogue was to have Satan, finding things on earth going against him (often because of the unexampled goodness and greatness of England's rulers), summon a council of his angels to determine what was to be done. In these assemblies the speakers were almost invariably Beelzebub, Moloch, Belial, and Satan, one of whom usually suggested sending an evil spirit to earth to stir up the enemies of the good cause. This suggestion was adopted, the evil spirit dispatched, and, as a result of his activities, there ensued the plots and wars which formed the subject-matter of the poem. This is exactly the plan of "Armageddon." Mr. Phillips, so far as I can recollect, is the first dramatist to make use of Milton's pandemoniac council, but poets had borrowed it as early as 1695. It furnished the machinery of Blackmore's interminable epics, "Prince Arthur" (1695), "King Arthur" (1697), "Eliza" (1705), "Alfred" (1723), and at the same time was used by John Dennis in his elegy on Queen Mary, "The Count of Death" (1695), and his heroic "Ramellies" (1706). Cumberland revived it for his "Calvary" in 1792, it was employed in Ogilvie's "Britannia" and Thelwall's "Edwin of Northumbria" in 1801, in Hoyle's "Exodus" in 1807, in Herbert's "Attila" in 1838, and doubtless in a number of other poems which have not come to my attention. Though the use in "Armageddon" of Attila as Satan's emissary recalls Herbert's epic, Mr. Phillips probably knew none of these works which are so much like his own. Indeed, he may never have heard of any of them—a fact which it will be well for us who study sources and influences to bear in mind.

Old Saws and Modern Instances

ENGLISH LEVITY AND FRENCH SERIOUSNESS.

TO THE EDITOR OF THE NATION:

SIR: In an article in one of your recent issues on "England After Six Months of War," Mr. James F. Muirhead makes an interesting comparison of the present attitudes of the English and French nations. These are his words: "It seems paradoxical to assert that our country is at this moment filing a new claim to the somewhat forgotten title of Merrie England, but in a sense this is almost literally true. Our French allies seem to have been immensely struck by the *gaieté de cœur* of Tommy Atkins in the field, just as we, too, have been struck by the somewhat unexpected gravity, pertinacity, and 'dourness' of Piou-Piou."

The reputation of England for merry-making is an old one, but the French have never been proverbially serious by comparison. It is therefore interesting to note that in the latter part of the twelfth century an

observation somewhat similar to that of Mr. Muirhead was made by a French ecclesiastic. Petrus Cellensis, Bishop of Chartres, in writing to the monk Nicholas, of Saint Albans, says, "Nec indignetur Anglica levitas, si ea solidior sit Gallica maturitas," and then, in a passage too long for quotation, he shows himself to be one of the pioneers in the study of the influence of environment on national temperament, for he holds that the frivolity of the English character is due to an aqueous atmosphere because England is an island, and that the seriousness of the French mind is a result of the sturdy mountains which are to be found in France.

JOSEPH F. GOULD.

Norwood, Mass.

A QUESTION OF RELATIVE VALUES.

TO THE EDITOR OF THE NATION:

SIR: After reading in your issue of November 25 Miss Haight's fine translations from the Greek of Simonides, with her adaptation of them to the unhappy but glorious Belgians, I ask myself if a dead Belgian is not worth more to the future of civilization than a myriad neuter Americans. L. L. FORMAN.

New York.

"FRIGHTFULNESS" IN LUCRETIUS.

TO THE EDITOR OF THE NATION:

SIR: I feel sure that during these last months, when all our papers have been so full of "frightfulness," whether viewed as a distinct national policy or regarded simply as a necessary concomitant of modern warfare, with its amazing engines of destruction, some of your readers must have recalled the apt lines of Lucretius, V, 1305-7:

> sic alid ex alio peperit discordia tristis
> horribile humanis quod gentibus esset in armis,
> inque dies belli terroribus addidit augmen.

But there are four other lines in the same book (1152-1155) which are of vital interest as containing not merely a marvellous prediction like the above (though for Lucretius rather, perhaps, the result of retrospect), but as indicating for the Germany of to-day a certain fearful looking for judgment in the to-morrow:

> circumretit enim vis atque iniuria quemque
> *atque unde exorta est, ad eum plerumque revertit;*
> nec facilest placidam ac placatam degere vitam
> *qui violat factis communia foedera pacis.*

Has anything of equal force been said by any modern in words as few?

WILLIAM HARDY ALEXANDER.

University of Alberta.

"MILITARY NECESSITY" IN XENOPHON.

TO THE EDITOR OF THE NATION:

SIR: When the History of the Rise and Fall of Military Necessity shall have been written, Xenophon and the Ten Thousand will find a higher place in the estimation of the moral world than the recent invaders of Belgium. The latter, because the Belgians rightfully resisted the violation of their neutrality, laid waste the land, not to mention worse deeds. The Germans plead military necessity, but surely their need could not have been greater than that of the Ten Thousand when passing through the country of the Carduchi. The Greeks were in retreat, pursued as they thought by the relentless Artaxerxes. They had no money with which to purchase provisions, and they had a journey before them of more than a thousand miles through a hostile land. In spite of this overwhelming "military necessity," they did not ravage the land, they did not enslave the inhabitants, they contented themselves with commandeering only provisions.

τὰ δὲ ἐπιτήδεια πολλὰ ἦν λαμβάνειν, ἦσαν δὲ καὶ χαλκώμασι παμπόλλοις κατεσκευασμέναι αἱ οἰκίαι, ὧν οὐδὲν ἔφερον οἱ Ἕλληνες, οὐδὲ τοὺς ἀνθρώπους ἐδίωκον, ὑποφειδόμενοι, εἴ πως ἐθελήσειαν οἱ Καρδοῦχοι διέναι αὐτοὺς ὡς διὰ φιλίας τῆς χώρας, ἐπείπερ βᾶσιλεῖ πολέμιοι ἦσαν· τὰ μέντοι ἐπιτήδεια ὅπου τις ἐπιτυγχάνοι ἐλάμβανον· ἀνάγκη γὰρ ἦν. (Anab., Bk. IV, Ch. I.)

And when in a far more trying situation, after being attacked and having some of their number killed, including two *ἄνδρας ἀγαθούς*, they were assailing a position held by the Carduchi in order to open a way for their baggage train, the Greeks "did not encircle their enemies, but left a way open so that if they should so desire they might retreat." (Anab., Bk. IV, Ch. II.)

ARTHUR T. BROWN.

University of Chicago.

"OUT OF THE TRENCHES" IN TACITUS.

TO THE EDITOR OF THE NATION:

SIR: Among the unique developments of the present war must be reckoned the proposal of certain self-appointed envoys to visit Europe, and to bring peace to the warring factions by pointing out a better way. Yet such a mission is not without parallel even in ancient times, as the following incident will show.

When the victorious Flavians were closing in on Vitellius, some regularly appointed envoys were sent out by the Emperor to see whether there was still any chance of making terms. Speaking of this fact, Tacitus goes on to say (Histories, Book III, Chap. 81):

To the envoys Musonius Rufus had attached himself. He was of equestrian rank, and a person devoted heart and soul to the study of philosophy and the doctrines of the Stoics. And so he began to make his way in among the companies, reading the soldiers a lecture, in which he set forth the blessings of peace and the perils of war. This proceeding many counted a good joke, but it wearied others; and there were some ready to knock him down and trample upon him, had he not desisted from his ill-timed disquisition at the suggestion of the more orderly and the threats of others.

H. C. NUTTING.

Berkeley, Cal.

THE PLACE IN THE SUN.

TO THE EDITOR OF THE NATION:

SIR: This phrase, like many other things which have been found useful in the present war, was not originated by Germans. Pascal seems to have first used it in the "Pensées" (Article VI, 50, ed. Havet): "Ce chien est à moi, disaient ces pauvres enfants; c'est là ma place au soleil. Voilà le commencement et l'image de l'usurpation de toute la terre."*

Possibly Pascal had in mind some recollection of Diogenes; we do not know. But the fact that it was usurpation to assert absolute right to the "place in the sun" is striking.

Rousseau takes up the idea in his "Discours sur l'inégalité," 1e partie: "Le premier qui, ayant enclos un terrain, s'avisa de dire et trouva des gens assez simples pour le croire: Ceci est à moi, fut le vrai fondateur de la société civile. Que de crimes, de guerres, de meurtres, que de misères et d'horreurs n'eût point épargnés au genre humain celui qui, arrachant les pieux et comblant le fossé, eût crié à ses semblables: Gardez-vous d'écouter cet imposteur; vous êtes perdus et vous oubliez que les fruits sont à tous, et que la terre n'est à personne!"

Here the expression itself is not used, but the influence and the attitude of mind are clear. Rousseau also speaks of a usurped right.

It is interesting to quote here another of the Pensées, which does not contain the word "sun," but does turn upon "place":

"Que l'on a bien fait de distinguer les hommes par l'extérieur, plutôt que par les qualités intérieures! Qui passera de nous deux? qui cédera la place à l'autre? Le moins habile? mais je suis aussi habile que lui; il faudra se battre sur cela. Il a quatre laquais, et je n'en ai qu'un: cela est visible; il n'y a qu'à compter; c'est à moi à céder, et je suis un sot si je le conteste. Nous voilà en paix par ce moyen; ce qui est le plus grand des biens." ("Pensées," article V, 6.)

Later the expression "place au soleil" becomes quite common in French. Writers from Chateaubriand and Balzac to Marcelle Tinayre make use of it, the last, our contemporary, as the caption to her story, "Hellé": "J'ai mes droits à l'amour et ma place au soleil."

Littré defines: "Avoir sa place au soleil, recevoir comme les autres la chaleur et la lumière du soleil." This is rather far from Pascal! Larousse gives as a definition: Real estate.

The expression seems to have been taken up by the Teutons rather late. Karl Hillebrand used it in 1882, though Ladendorf thinks it was first used about twelve years earlier by Ludwig Bamberger, in a letter to a friend (published in his Works, V, 51, 1881): "So lasset dem Anfang der Einheit, wie schlecht Ihr ihn immer haltet, seinen Spielraum und gönnt ihm den Versuch, sich einen Platz an der Sonne zu verdienen." It became popular in Germany after a speech by von Bülow, December 6, 1897—we here rely on Ladendorf.

The most touching use of the expression is again French—Béranger's "La Sainte Alliance des Peuples: Chanson chantée à Liancourt, pour la fête donnée par M. le duc de La Rochefoucauld, en réjouissance de l'évacuation du territoire français, au mois d'octobre 1818."

> *Air du* "Dieu des bonnes gens."
> J'ai vu la Paix descendre sur la terre,
> Semant de l'or, des fleurs et des épis.
> L'air était calme, et du dieu de la guerre
> Elle étouffait les foudres assoupis.
> "Ah! disait-elle, égaux par la vaillance,
> Français, Anglais, Belge, Russe ou Germain,
> Peuples, formez une sainte alliance,
> Et donnez-vous la main.
>
> Pauvres mortels, tant de haine vous lasse;
> Vous ne goûtez qu'un pénible sommeil.
> D'un globe étroit divisez mieux l'espace;
> Chacun de vous aura place au soleil.
> Tous attelés au char de la puissance,
> Du vrai bonheur vous quittez le chemin.
> Peuples, formez une sainte alliance,
> Et donnez-vous la main."

MARY VANCE YOUNG.

South Hadley, Mass.

*Otto Ladendorf, "Historisches Schlagwörterbuch," Trübner, 1906, p. 243, has already noted this.

THE INEVITABLE WAR
By FRANCIS DELAISI
Published in Paris in 1911, under the title of *La Guerre qui vient*, this volume by an eminent French Socialist gives a new view of the ante-bellum relations of Germany, France and England. Its discussion of the resignation of M. Delcassé in 1905 is especially timely.

ORDEAL BY BATTLE

OVER

28,000 COPIES

of this remarkable new book have already been sold.

So great was the increasing demand for Mr. Oliver's book that it became necessary on December 18 to order the printing of a special American edition, similar in every respect to the English edition.

This new edition is now ready

ORDEAL BY BATTLE

can be had to-day at your own bookstore or from the publishers.

"The Best Book This War Has Produced."—Theodore Roosevelt.

ORDEAL BY BATTLE

By Frederick Scott Oliver

"The first great book on the war. . . . **No more readable book, none more enthralling, has for years been written.** . . It deals, and deals worthily and greatly, with the mightiest issues ever known to the world. . . . By one of those rare men in whom hard thinking and clear writing go together. . . . Abounds in personalities and examples. . . . **Alive and luminous;** adorned with portraits, enriched with studies of character and performance."—*N. Y. Tribune.*

"**A big book** and a valuable book. A stirring appeal, able, eloquent, **vigorous and sincere.** Here at last is a man who has a definite thesis to maintain."
—*The New Republic.*

"A rare eloquence and a wealth of illustration which **recalls Burke.** . . . A storehouse of political thought, set down with a precision and an eloquence which have long been absent from the literature of politics. . . . Every page is lit up by some memorable phrase."
—*The London Times.*

"The **most notable book** concerning the war that has yet appeared."—*The Standard.*

"By far the best that has yet appeared. . . . **Contains the gist of hundreds of books,** new and old, and opens up new vistas of speculation."—*London Post.*

"There is not a chapter in this searching analysis of our national strength and weakness which is not **informed by high patriotism** and statesmanlike grasp of causes."—*London Globe.*

"**A strong, manly and determined appeal** to the nation's manhood and common-sense."
—*Daily Telegraph.*

"**A genuine book,** a great and necessary adventure in difficult truth-telling."—*London Saturday Review.*

A Kindly Help for Failing Strength

TOMORROW and tomorrow...the tide of years sets in and the autumn of life has come. Energy has become enfeebled, the blood thins, resistance is shaken and the digestive processes weaken—weary days give way to sleepless nights.

Then will Sanatogen help! Not to replace the common articles of diet, but to make them give maximum nutriment. Not as a substitute for medical treatment, or to give temporary stimulation, but to aid the nervous system in its direct control over the digestive processes, to enrich the blood, and to promote restful slumber.

For Sanatogen is the *notural* way. It is a chemical union of purest albumen of milk and an organic phosphorus preparation, thus supplying in most easily digestive form the best upbuilding elements and giving the starved cells organic phosphorus, that most vital food, "in such a form," as Dr. Saleeby says, "that the nervous system can actually take hold of it."

John Burroughs, the venerable naturalist and author—78 years young—has written:

"I think Sanatogen did me much good—it gave me strength, steadied my nerves and greatly improved my sleep. It comes the nearest to being a remedy for old age that I have yet struck."

And as over 21,000 physicians have themselves written in praise of what they have seen Sanatogen do in daily practice, you may indeed be sure that the reputation of Sanatogen is founded on truth and tangible results.

Sanatogen is sold by good druggists everywhere, in sizes from $1.00 up.

Grand Prize, International Congress of Medicine, London, 1913

SANATOGEN
ENDORSED BY OVER 21,000 PHYSICIANS

Send for Elbert Hubbard's new book—"Health in the Making." Written in his attractive manner and filled with his shrewd philosophy, together with capital advice on Sanatogen, health and contentment. It is FREE. Tear this off as a reminder to address THE BAUER CHEMICAL CO., 29C Irving Place, New York.

The Nation

NEW YORK, THURSDAY, DECEMBER 30, 1915.

Summary of the News

Dispatches from Washington on Tuesday indicated that the Austrian reply to the second American note on the Ancona may be received by the State Department at the end of this week. No official forecast of the contents of the reply has been given out in advance of the receipt of the note. Both in Vienna and in Berlin, where the temperate character of the last American note is recognized, opinion in regard to prospects of a settlement appears from the dispatches to be hopeful. Whether or not this is based upon an assumption that the way has been opened for a lengthy diplomatic discussion, as in the case of the Lusitania, remains to be seen. In Washington the opinion seems to persist that no such prolongation of the discussion will be tolerated.

The tenseness of the situation existing between the United States and the Central Empires is not mitigated by the pertinacity of the latter in continuing to attack passenger-carrying liners, according to information available as we write, without warning. News came on Thursday of last week of the sinking, on the preceding Tuesday, of the Japanese liner Yasaka Maru in the eastern Mediterranean, happily without loss of life. According to a report received by Secretary Lansing on Monday from the American Consul at Port Said, the ship was sunk without warning and no attempt to escape was made. One American was on board. The nationality of the submarine has not been established. A similar obscurity veils the identity of the submarine which, on December 24, torpedoed, again without warning, according to present information, the French steamship Ville de la Ciotat in the Mediterranean. Eighty of the passengers and crew are reported to have lost their lives. It is stated that no American was on board.

Dispatches from Washington last week professed to throw some light on two of the other questions outstanding between the United States and Germany. The settlement of the Lusitania case, it was stated, was originally delayed on account of the high state of public feeling in Germany. With the lapse of time and the German successes on land, feeling had calmed down and a settlement was near, when the German public was again irritated by the dismissal of Capts. von Papen and Boy-Ed. Consequently the matter is again postponed. Publication of Germany's latest note on the question of the Frye, the full text of which has been received by the State Department, has been withheld on account of its possible bearing on the open issues involved in the cases of the Lusitania and the Ancona.

News of Teutonic conspiracies in this country has been comparatively meagre during the past week, the outstanding event being the indictment by the Federal grand jury, on December 23, of Paul Koenig, the "special investigator" of the Hamburg-American Line, on two charges: the one of having organized a "military enterprise," the purpose of which was to destroy the Welland Canal; the other of having organized an enterprise to obtain military information in Canada for the German Government.

Col Edward Mandell House sailed on Tuesday for Europe, where he will visit London, Paris, and Berlin as the personal representative of the President. Col. House's diplomatic tour is officially stated to have no connection with any mission of peace, and to be solely for the purpose of interpreting American sentiment to American diplomatic representatives.

The second convention of the Pan-American Scientific Congress opened in Washington on Monday. The delegates were welcomed by Secretary Lansing, and Pan-Americanism was the theme of all the speeches of the opening day

On December 24 Secretary Daniels made public the report, hitherto not disclosed, submitted by the General Board of the navy on July 30 last. The report recommended that the navy should by 1925 be made equal to the most powerful maintained by any other country in the world.

Events in England appear to be hastening to a governmental crisis. The situation is not perfectly clear as we write, and it is possible that a decision may have been reached by the time these lines appear in print. The facts, however, are tolerably obvious. Undercurrents of dissatisfaction with the Coalition Government, as at present constituted, of which the most open manifestation has been found in the papers controlled by Lord Northcliffe, have recently been brought to the surface and swollen in volume by two causes. The first was the now famous "too late" speech made by Mr. Lloyd George in the House of Commons on December 20; the second was the failure of Mr. Asquith last week to fulfil expectations by announcing in the House of Commons the results of Lord Derby's recruiting scheme. The first aroused the public to a realization of deficiencies displayed in the conduct of the war; the second awoke well-grounded suspicion that the proportion of enlistments of unmarried men had proved disappointing. Other newspapers, therefore, have joined with the *Times* and *Daily Mail* in calling on Mr. Asquith to fulfil his pledge that, if the response of unmarried men to Lord Derby's scheme should prove insufficient, other measures would be taken to compel them to come in. The issue, therefore, is the direct one of conscription. That the Cabinet is divided on the question is evident, and Mr. Redmond last week stated squarely in the House of Commons that the measure would be opposed by the Nationalist party by every means in its power. As we write, three courses present themselves: the present Cabinet, still under Mr. Asquith, may adjust its differences, deciding definitely either for or against conscription; the Cabinet may be reorganized, with Mr. Lloyd George, for whom there seems to be a strong popular demand, as Premier; or the question may be put before the people in a general election.

Omitting disclosure of the results of Lord Derby's recruiting scheme, Mr. Asquith made a full statement on the military position of the Allies on December 21, in introducing a supplementary estimate providing for the raising of the numerical strength of the army from 3,000,000 to 4,000,000 men. The bill was passed in the House of Commons, without a division, on the following day, as was also the bill to prolong the life of the present Parliament another eight months.

Further changes were announced last week in the British high command. Lieut.-Gen. Sir William R. Robertson, Chief of the General Staff in France, has been recalled to become Chief of the Imperial General Staff at army headquarters in London; Sir Charles Monro is recalled from the Dardanelles to succeed to the command of the First Army in Flanders, and his place as British commander at the Dardanelles is taken by Sir Archibald Murray, who was formerly Chief of the Imperial General Staff.

Evidence of a split in the Socialist party in Germany came on December 21, when nineteen Socialists (later rumors by way of Zurich have stated that a number of Socialists also abstained from voting) voted against the new war credit of 10,000,000,000 marks which the Government had requested.

From the Balkans little news of importance has come. There have been rumors that the Teutonic forces were preparing to develop an attack against the positions of the Allies at Salonica, which, according to Gen. Castelnau, are now impregnable, but these reports have not been confirmed by later news. Unofficial dispatches from London on Monday announced positively that King Constantine had informed the Central Powers that an invasion of Greek territory by Bulgarian or Turkish troops would not be tolerated, but here again there is no confirmation. Following the example of his sovereign, M. Skouloudis, on December 20, gave an interview to an English journalist in which he defended the position taken by Greece. The interview is interesting, and M. Skouloudis makes a good plea for his country, and is just in some of his censure of Allied diplomacy. An important omission, however, is any explanation of the fact that M. Venizelos, as the duly elected representative of a majority of the Greek people, may be presumed to have expressed the people's will in the policy which he advocated, and which was thwarted by the action of King Constantine.

The "peace ship" of Mr. Henry Ford, of Detroit, has apparently encountered difficulties internal as well as external. There have been numerous reports of dissensions on board and certain of the pilgrims have retired from the enterprise. Mr. Ford himself, who is stated to be ill, is on his way home to America. The enterprise, however, has not been abandoned.

Dispatches from Peking, under date of December 24, told of the outbreak of a revolutionary movement, in opposition to the change to a monarchical government in China, under the leadership of Tsai Ao, formerly Military Governor of Yunan. Fifty thousand troops have been sent to the scene by the Chinese Government.

The Week

There ran through the speeches at the opening of the Pan-American Scientific Congress on Monday a deep current of feeling. The human note was strongly sounded in Secretary Lansing's altogether admirable address of welcome. "The American family of nations might well take for its motto that of Dumas's famous musketeers: 'One for all and all for one.'" This is not the ordinary style of a Minister of Foreign Affairs. Neither do we find the usual reservations and cautions of statesmanship: "The ambitions of this republic do not lie in the path of conquest, but in the paths of peace and justice. Whenever and wherever we can we will stretch forth a hand to those who need help." It was a pledge of security not only against the outside world, but as against ourselves. "When we attempt to analyze Pan-Americanism we find that the essential qualities are: absence of covetousness of another's possessions, absence of jealousy of another's prominence, and, above all, absence of that spirit of intrigue which menaces the domestice peace of a neighbor." Mr. Lansing did not mention Mexico, but Mexico must have been in the minds of all who heard him.

And primarily it was the thought of Mexico that gave to the proceedings the striking touch of sincerity. Much was said of the war in Europe, and of how it has emphasized the need of a common defence for the American republics. The Chilian Ambassador, as president of the Congress, spoke of the Monroe Doctrine as having developed into a "solid tie of union, a guarantee, a bulwark for our democracies." But the impression of all that was said is not that a mere external force, a possible danger from across the Atlantic, has brought the American republics huddling together against the approaching storm. Pan-Americanism is not primarily the result of a welding process from the outside, but of a process of amalgamation from within. Fear of what may come after the war in Europe would not be sufficient to bring the republics together if the Latin Americans were afraid of the United States. The reason why Latin America is learning to believe in our disinterestedness is that we have given in the last five years the most complete demonstration possible. In Mexico we have shown that our policy is the American continent for all Americans, and not the Americas for the United States.

That the French steamer Ville de la Ciotat was torpedoed and sunk by a submarine in the Mediterranean, on the 24th, without warning, is officially stated by the French Ministry of Marine. A majority of the passengers and crew were picked up by an English steamer, but 79 or 80 lost their lives. This comes on top of the sinking of a Japanese steamer a few days before, the absence of warning in which case the American Consul at Port Said has confirmed by cable. How gravely these acts of lawlessness affect the situation between our country and Austria arising out of the Ancona massacre must be clear to any one who stops to think. The reply of the Austrian Government to our first note on the Ancona case laid most stress on the question of fact; but it would be a ghastly joke to pretend that the exact circumstances of the killing in the Ancona case have to be looked into with solemn accuracy at the very moment when the cables are informing us of the slaughter of non-combatants on merchant ships, without a moment's warning, as the regular practice of the Teutonic submarine commanders. While our demand in the Ancona case—as in that of the Lusitania and the Arabic—is expressly grounded on the killing of Americans engaged in the exercise of their lawful rights, the only way to protect those rights and to prevent such killing is by bringing about the cessation of submarine outlawry.

England, to win the war, must have, like any other belligerent, men, munitions, and money. Only in respect to the last-named commodity has no criticism been levelled as yet against Mr. Asquith. With regard to men and munitions, the campaign against the Asquith Cabinet is once more in full swing. The press of Lord Northcliffe takes it for granted that the Derby voluntary enlistment plan has failed, and that compulsory service is necessary. On the munitions question we have Lloyd George's increasingly fervent appeals to the workers. It is not necessary to assume that Lloyd George is coöperating with Lord Northcliffe. He may be merely trying to do his duty as Minister of Munitions in characteristically whole-hearted fashion. Yet his warnings and exhortations cannot but fall in with Northcliffe's attack upon the Cabinet. The time, of course, is propitious. The Government has confessed failure in the Dardanelles. The schedules in bankruptcy have been filed—200,000 men wasted in killed, wounded, and invalided. It is the worst piece of single news to which the British people has been treated since the beginning of the war. If Asquith is to be forced out at all, it is not likely that another such opportunity will occur.

The demand for a reconstruction of the Asquith Cabinet must be based on one of two assumptions. Either there is a lot of genius running loose in England which Mr. Asquith has failed to bring into the service of the nation, or else Mr. Asquith has failed to energize the material he has at hand. With regard to the first proposition, it should be noted that the present Cabinet is a Ministry of all the talents. The only Unionist leader of note not included is Sir Edward Carson, and he went out of the Cabinet as a protest against present methods. In backing Lloyd George, therefore, the movement has apparently decided that what the Cabinet needs is a reshuffling, with a man of action at the head. It may very well be that with Lloyd George as Premier things would happen. The fact remains, however, that Lloyd George in his own special department of munitions has, by his own accounts, not made a huge success of it. And the reason cannot be that he has been hampered by Mr. Asquith. The fact is, of course, that the British Cabinet, in the face of a task of unprecedented dimensions, has made blunders, precisely as every other belligerent government has blundered, not excluding Germany. These errors have been in part avoidable, but for the greater part inevitable. Lloyd George in Asquith's place might profit by his predecessor's experience, but no miracles of victory will be worked through mere manipulation of Cabinets and Premiers.

"I had much rather stretch out my hand to America in gratitude," writes Cardinal Mercier, "but I must hold out my open hand to beg." And it is right that he should beg, unafraid and unashamed, and for more and more and more. This is not only Belgium that is speaking; it is devastated Europe addressing to peaceful and prosperous America the only kind of Christmas message it can frame: Help us. We have given, but not enough. Not enough when measured by what we can afford to give; certainly not enough when measured by the immensity of the need. A war which has dwarfed all previous standards of woe and suffering must be made to dwarf all previous standards of charity. It is not our hearts that are at fault, but our imaginations. We must not let the fact that this is the greatest calamity of centuries be-

come a commonplace. Again and again we must be reminded that this is a horror of which no one alive to-day has seen the like, of which no one alive to-day will ever see the like. The recruiting offices all over Europe are asking the young men to think what answer they will give when their children some day ask them what their fathers did in the time of great need. It is for us to think what answer we can make when our children some day shall ask us what we, of prosperous and peaceful America, did at a time when half the world was in agony.

In a statement issued at Boston a day or two ago, Dr. James L. Barton, chairman of the national committee for Armenian and Servian relief, made public the text of a protest, addressed by the German Ambassador at Constantinople to the Turkish Government on the subject of the Armenian atrocities. In this protest, which was filed on August 9, the German Government, after referring to the facts that had come to its knowledge, declares that it finds itself "obliged to remonstrate once more against these acts of horror." It is gratifying to note this action by the Kaiser's representative, which, whether any effective interference was practicable or not, has at least the merit of asserting the position that any civilized nation must necessarily take in face of such a situation. Evidently, Reventlow's doctrine that it would be wrong for a German to interfere, even by criticism, with the freedom of the Turk to conduct himself as he pleases in these little affairs is not shared by the highest authorities at Berlin.

There may be a little sarcasm in the comments of the *Frankfurter Zeitung* on President Wilson's plans for national defence. This organ of Liberal opinion in Germany thinks that they will, or ought to, put an end in the United States to outcries against Prussian *Militarismus*. "No people has inveighed against the German system more loudly than the Americans." Well, what will they say about "Wilson's conversion to militarism"? But the *Frankfurter*, in its treatment of the whole question, goes beyond international retorts. It takes a very sober view of the consequences of the adoption by the United States of a policy of great armaments. It will unhappily reinforce the doctrine, already regarded in Germany as of prophetic force, that the power of the whole earth is to be concentrated in the hands of two or three nations, with all the others shut out. On the contrary, boldly declares the *Frankfurter Zeitung*, "we hope and believe that the result of the war will be a very significant distribution of power in the world, so that mankind will be freed from the terrible pressure of *Weltmächte*." A Democratic Administration at Washington would naturally wish to share in such aspirations, not to do anything to dash them.

Statistics of the amount of destruction of British merchant ships that has been wrought by German submarines and mines are periodically put forward by the Overseas News Agency. The latest of these places the amount from the beginning of the war to the end of last month, "as stated on competent German authority," at 1,231,944 tons, "which means a loss of 5.9 per cent. of the total British tonnage." Presumably, in drawing attention to these figures, the expectation is that an impression will be produced of the enormous effectiveness of this harrying of British commerce. The actual conclusion that must be produced in the mind of any one who stops to think is precisely the opposite. Undoubtedly, a loss of 6 per cent. of the entire volume of British shipping, even if spread over a period of sixteen months, is no light matter; but how utterly incapable it is of producing any appreciable effect upon the fortunes of the war is sufficiently evident when the result is translated into terms of insurance. Evidently, an extremely small rate of insurance —so small as to have no serious bearing even on the question of prices—would be sufficient to cover the risk imposed in any one ordinary voyage by an instrumentality which effects a destruction of less than half of one per cent. of the nation's tonnage in a month. And this remains true even after allowance is made—as it should be—for the fact that the risks run by that part of the shipping which is specially exposed to the danger of submarine attack are far greater than the average for the entire volume.

Premier Borden's statement that Canada is willing to double her present contingent needs only translation into figures to show what a great burden she is ready to bear. She has already more than 175,000 men under arms, and of these nearly 100,000 are on the Continent or in England—equipped and maintained by the Dominion. Mr. N. W. Rowell, the Liberal leader in Ontario, has insisted that in comparison with the mother country Canada should have 600,000 men under arms, and at least 300,000 constantly on the fighting line. As the situation in Europe has darkened, Canadian determination, as reflected in the press, has kept steady pace with England's. So far as population goes, the Dominion's 8,000,000 people would seem able to raise 400,000 men without extraordinary effort. But it must be remembered that millions of Canada's population are not strictly British, and that she cannot recruit so easily as homogeneous Australasia. The financial burden, moreover, will be very great if Canada undertakes to maintain 400,000 men on the Continent.

Mr. Roosevelt hates and despises Mr. Wilson more than he does any other man in public life. But this does not mean that, if he tried, the Colonel could not hate and despise somebody worse than he does Mr. Wilson. To say otherwise would be to reflect on the Colonel's versatility and power of emotional concentration. This is the latest explanation of the famous Gary dinner, and a luncheon that took place about the same time. At these functions Mr. Roosevelt let it be known that if the Republicans try to nominate a candidate who is weak on Americanism, meaning preparedness, Mr. Roosevelt will throw his support to Wilson. This is consistent and adequate preparedness. It is preparedness against any possible adversary, Wilson, or whoever is the greater traitor nominated by either party on the un-American platform of disagreeing with Mr. Roosevelt. Believing heart and soul in preparedness, the Colonel has prepared a hymn of hate which may be discharged in any direction, like the guns of the Queen Elizabeth:

Hate of the mind and hate of the spleen,
Hate of the stout and hate of the lean,
Whom will I hate in June, '16?
Wilson!
Burton!
Root!
McCall!
} As the case may be.

For the third or fourth time in the last few years, Gen. Leonard Wood has struck an excellent blow for discipline and morality in the army by severely censuring a court-martial which failed to do justice. In previous cases he has dealt with courts that permitted drunken officers to escape without adequate punishment. Now his rebuke goes to the court which tried Col. Robert L. Hirst; the latter subjected a soldier of his command, who had struck him, to a cruel punishment, chaining him to a post. This savors entirely too much of Prussian militarism to be tolerated in the United States Army. As it is, there is much too great

severity shown by the dealings of courts-martial with enlisted men as contrasted with the treatment accorded officers. Furthermore, Gen. Wood, Secretary Garrison, and Judge-Advocate-General Crowder are incessantly endeavoring to tone up the standards of the military courts, in which undertaking Gen. Wood's powerful and just rebuke will be extremely helpful. As the case of Col. Hirst now stands, the soldier who struck the Colonel in a saloon has been sentenced to five years' imprisonment at hard labor, while the Colonel, whose appearance in full uniform in a saloon in which enlisted men were drinking has not been explained, and whose guilt as to the punishment inflicted Gen. Wood considers established, has gone scot free.

An excellent step has been taken by the Federal Reserve Board in the adoption of a resolution declaring it to be the opinion of the Board that persons holding political or public office, or acting as members of party committees, "cannot consistently with the spirit and underlying principles of the Federal Reserve act serve as directors or officers of Federal Reserve banks." Copies of the resolution are to be sent to all the member banks, and they are urged to conform to it in the election of directors or officers of Federal Reserve banks. The effect of this action should be not only conclusive as to the class explicitly covered by the resolution, but highly effective in keeping out the danger of appointments for politics in any shape. With this clear declaration of principle on record, any person who objects to a political appointment will have a powerful force to back him in his protest. There are plenty of ways for politicians to get in their "pull" without naming any office-holder or party committeeman; but in spirit the resolution adopted by the Board covers the whole tribe.

Mr. John Hays Hammond told his Detroit audience on Monday that nothing but "egregious blunders" could prevent the Republicans from winning the Presidency next year. On the subject of Republican blunders, Mr. Hammond speaks as one with authority. He has figured in some of the most egregious of them. And it is a distinctly left-handed compliment which he pays to the sagacity of his party leaders when he predicts that they will not blunder in 1916 because there will be "small occasion" for them to do so. The inference is that if they possibly could make a mistake they would. As for the Democrats, whatever they do is a blunder. They propose special taxes to meet the cost of national defence. That is a blunder. They should have issued bonds. But that would have been only a smaller blunder. Direct taxes the people do not favor. Bond issues they merely look upon "unfavorably." It is hard to please Mr. Hammond.

If anybody is under the impression that the spoils idea has become negligible in this country, he might find instruction in what the Boston correspondent of the Springfield *Republican* has to say about Governor-elect McCall's Christmas. His mind was of necessity occupied with thoughts of the "horde of office-seekers who give him no peace." The correspondent goes on to recall the days when Cleveland came into the Presidency, and the Democrats, after a quarter of a century of exile, appointed a "smelling committee" to report what offices there were that the long-waiting faithful might hope to seize upon. "But these hungry Republicans," we are told, "observe no such formality. They seem to have no mercy on their Governor-elect. They besiege him 'terribly,' for that is the word used to describe the assault which is made upon him." Mr. McCall is described as already suffering from the strain that all this is putting on him, at a time when he would like to give all his thoughts to preparation for the duties he is about to assume. If Massachusetts Republicans, after having won a long-sought victory by putting up a man of McCall's high quality, proceed to treat the State to such an exhibition as this, is anything further needed to show what we are saved from by the civil-service laws?

Western backers of conservation measures in Congress are spurred to industry by the belief that unless these can be made ready before the programme of legislation for national defence, they will stand little chance of passage. Chairman Ferris received special permission to hold his House Committee on Public Lands in session through parts of the Christmas recess. This Committee has now voted to report the water-power bill in virtually the same form in which it passed the House last spring; and it is also taking up the leasing bill for coal, oil, gas, and so on, and the stock-raising homestead act. The Senate Committee is expected to amend the water-power bill radically, but it has already reported the homestead bill in its original form. The West is much interested in these measures. They are urgently required, as Secretary Lane has stated, for national development. To delay their passage another year—they were first presented in 1913, with the Alaskan railway and coal-leasing laws, and the new reclamation act—would be highly unfortunate.

Following the recent affiliation of the American School of Classical Studies in Rome with the American Academy, has come the appointment of its first permanent director, Professor Clark, of Yale. Both events mean a broadening of the activities of an institution which for twenty years has furthered the study of archæology, literature, and ancient art. It has not accomplished so much as the American School of Classical Studies at Athens, which was founded fourteen years earlier, and which by its excavations at Eretria, Argos, and Corinth has probably done more than any non-Greek archæological body except the French Institute. But the School at Rome provides a place where American students have been able to pursue the study of classical antiquities in their full bearing upon ancient life, and in some instances to make discoveries of value. Under a trained administrator, and in connection with the Academy, it should reflect greater credit than ever upon its parent body, the Archæological Institute of America.

A new kind of world's fair is called for by Ralph Adams Cram for the Pilgrim Tercentenary in Boston in 1920. The old type, "with its splendor and magnificence and exaltation of material achievement, is out of the question," he holds. There should be operatic performances of the best from all countries, and concerts and recitals which would include all kinds of music. The drama of all nations should be presented in all its forms. But he lays emphasis upon the idea that the celebration should be, "not only an historical and scenic event, but an opportunity for reconsecration of old ideals and adjustment to the new ideals which will result from the present war." How can these things be made concrete and graphic? Mr. Cram suggests conferences of all the learned and patriotic societies of Europe and America. He would also like to see "a great Roman Catholic church, an Episcopal church, and a great Protestant church within the grounds, which would be real churches with services and music." There should also be a place for Olympic games. Then it should be possible, not merely to behold, but to buy, any of the beautiful things made anywhere in the world, while cafés and restaurants modelled after those of the various nations would supply food and drink of all countries.

"SECRET" DIPLOMACY.

Speaking for the Foreign Office, in the House of Commons last Thursday, Lord Robert Cecil refused to discuss England's diplomatic relations with any of the Balkan countries. The reason he gave was that "secrecy was the essence of success" in a Government policy respecting such matters. A cynic might remark that British diplomatic success in the Balkans has, indeed, been a great secret. If it exists, nobody knows it. But the cynic would be wrong if he thought that the whole story, when it comes to be told, will be nothing but one long record of imbecility on the part of the Foreign Office. Any half-dozen men in the street, or in a newspaper office, may think that they could have handled the Balkan diplomatic business better than the Foreign Secretaries of England, France, Russia, and Italy, but it is lucky for all concerned that they never had a chance to try. Lord Robert's insistence upon secrecy, however, raises large questions which were debated in England before the war and of which we shall certainly hear a great deal more after it is over.

They are sharply discussed in a book just published by B. W. Huebsch, "How Diplomats Make War." The author's name is not given, but he is identified as a "British statesman," a member of Parliament, evidently of the Radical group. He writes with a bitter pen, but has a large historical sweep and much knowledge, so that what he says is worth attending to even if one cannot follow him in the whole of his argument or agree with him in all of his conclusions. His main thesis may be set down in a few words. English diplomacy has for generations been in the hands of a narrow-minded and privileged class. The Foreign Office has been virtually self-perpetuating. Its officials have not been in touch with the people, and have for years gone on spinning their diplomatic webs in secret. Secrecy has been the great vice. The country suddenly wakes up to discover itself bound by treaties of which it had no preliminary knowledge, and by alliances and *ententes* and "conversations" of which nothing was known until they were declared to be "binding" on Great Britain. It was in such an unhappy condition of the management of her foreign policy that July, 1914, found England; and it is the contention of the writer of this book that, if English diplomacy had not been secret, if the whole matter could have been laid directly before the people, Great Britain would not have been drawn into the war.

This is highly dubious, in our opinion; and we do not think that the author's reasoning, or use of the official documents, is nearly so convincing as he imagines. But it is useless to go into such contentious matter at present. As to one of the chief positions of the volume, no American will have any quarrel with the writer of this book. It is that no treaties, forms of international alliance, or agreements with other nations ought to be entered into until they have been submitted to the representatives of the people in Parliament. To this extent, the proposal of "Democratic Control" of diplomacy is only what is the settled practice of the United States. In England the subject was brought up long before the present war accentuated the feeling that there was danger in secret treaties. In 1886 a resolution was moved in the House of Commons to this effect:

> That in the opinion of this House it is not just or expedient to embark in war, contract engagements involving grave responsibilities for the nation, and add territories to the Empire, without the knowledge and consent of Parliament.

It was defeated by a majority of only four votes. Mr. Gladstone was opposed to it, though he never held the sacrosanct theory of the Foreign Office. And, as a matter of fact, the English practice has more and more tended to imitate the American in the matter of getting the assent of Parliament to international agreements.

At the same time, in England as in the United States, it is impossible to take away from those in charge of the conduct of foreign affairs the responsibility for initiative. And for this a certain amount of secrecy is necessary. Certain kinds of information have to be held confidential. Otherwise, the information could not be got at all. And the first steps towards unravelling an international difficulty must in the nature of the case be undertaken by a few men. Diplomacy by mass meeting is impossible. But the results, the binding obligations, the shaping of the national policy—those are quite other matters. On them the voice of the nation must be heard. The diplomatic officials should always be compelled to do their work with the haunting consciousness that they will have to submit it all, in the end, to the considerate judgment of their fellow-countrymen. A point is reached where diplomacy ceases to be secret and makes a clean breast of everything. Democracy does not destroy the individual responsibility of statesmen. It rather heightens it. Leaders of a republic must be free to brood over their plans for the public welfare, and to mature them in the secrecy of their own minds; but they must strive so to direct their labors that when the full record leaps to light neither they nor their country shall have reason for shame.

WAR BURDENS AND "THE CLASSES."

Nothing that appeared in the cable dispatches last week was more notable than the manifesto to the people issued by a score of leading English bankers and financiers. In this was set forth unsparingly the character of the "stupendous task" of finance which confronts Britain, and which "will try the mettle of the nation as it has not been tried in a hundred years." What the nation must do to fulfil this task was stated in language as effective as it was simple and direct. It demands "the strenuous coöperation of every man, woman, youth, and maiden"; the production "of all non-essentials" must be stopped; the nation must "avoid the consumption of all non-essentials, and even restrict the consumption of essentials to the limit of efficiency"; for "only by all classes adding to and carefully husbanding their income, by selling foreign securities, by creating foreign credits, will it be possible to provide the vast sum needed by the nation and its allies."

To suppose that this exhortation will be literally, or even approximately, followed, would be to imagine a vain thing. But it will have considerable effect; and it gives expression to a state of mind which is widely current in England, which has already found concrete embodiment in legislation, and which is sure to find more as time goes on. Nothing has been more remarkable in the story of the war than the way in which the heavy increase of taxation in the successive British war budgets has been received, in Parliament and out. Of that grumbling over high taxes, and resistance to their imposition, which one is accustomed to regard as inevitable under all circumstances, there has been apparently a total absence. But even this does not do justice to the facts. Turning to the files of the three most important London weeklies, what do we find them saying, in the issue of September 25, immediately after Mr. McKenna's announcement of the budget for the coming year? Do they complain that the burden of taxation is needlessly high? Do they ask that more of the load be shoved off to

BUR-INGHAM PUBLIC LIB.

some indefinite future? Quite the contrary. "Perhaps the best verdict on the Budget as a whole," says the *Spectator*, "is that its main excellence consists in the indication of more to come." "The criticism of the Budget that will hold as Mr. McKenna's faithful prophecies of the future come true," says the *Nation*, "will be that it does not go far enough." And the *Economist* declares that the Budget, while deserving of praise for going as far as it does, "is not only belated, but inadequate." Thus all these weighty organs of opinion agree that the taxation determined on, though imposing, as Mr. McKenna himself declared, "an unprecedented burden on the country," ought to have been made not lighter, but heavier.

This is all the more remarkable because—as is plainly acknowledged on all hands—it is quite out of the question to make the taxation heavy enough to yield an amount even distantly approaching the sum needed for the prosecution of the war. The Government's expenditures during the calendar year now closing will have amounted to six and a half billions of dollars; in the coming year they are expected to be nine billions. The effect of the new taxes will be, roughly, to make the current revenue two billions instead of one and a half; and if the utmost were done that any one could dream of undertaking, the deficiency could not be reduced by more than another half billion. It is not on account of any fantastic hope of doing the impossible that British statesmen and journalists are in favor of taxes of unparalleled magnitude. What they are after is two things, both essential to financial soundness in such a crisis as this. First, they wish to place the system of taxation on a basis plainly adequate, by its mere continuance, for the service of the colossal public debt after the close of the war; and secondly, they wish to compel, so far as the tax system can, that economizing on the part of individuals the voluntary practice of which is so solemnly urged by the English bankers.

The attitude shown by the wealthy classes in cheerfully accepting, and even urging, the adoption of measures placing upon them these extraordinary burdens of taxation should furnish matter for a little wholesome reflection to those who are in the habit of thinking of the poor and the rich, "the masses and the classes," very much as of sheep and goats, or perhaps rather of sheep and wolves. Before the great war, it was a mere commonplace of the literature of social agitation that war is an affair which "the classes" contemplate with cold-blooded nonchalance because they get all the benefit while "the masses" make all the sacrifice. In every one of the warring countries, this notion has been abundantly disposed of by the awful toll of death that has been paid by prince as well as peasant, by those accustomed to every privilege and luxury as well as by the humblest of workingmen. In England, with its voluntary system, it is in the highest strata of society that the sacrifice in the shape of sufferings, wounds, and death has been heaviest and most general. But the test of taxes is, in a way, even more searching; for, if it is infinitely less grave, it is also unaccompanied by those inspiring sentiments and that tradition of *noblesse oblige* which make the offering of life and limb a matter of course. It would be absurd to assert that the way in which the double test has been borne is a proof of the soundness or justice of the existing economic order; but it is truly a complete refutation of that travesty of the existing order which so many glib-tongued world-reformers are in the habit of passing off as a faithful picture of it.

NATIONAL POLICY AND THE EXPERT.

When Secretary Daniels created the Naval Advisory Board, he thought, and the nation thought, that he was mobilizing the inventive genius of America in the service of the country. But there are members of the Advisory Board who are under the impression that the thing they were asked to do was to assume charge of the foreign policy of the nation, and as much of its domestic affairs as was necessary. One member of the Advisory Board has resigned as a protest against Mr. Daniels's "suppression" of the recommendations of the General Board of the Navy. These recommendations called for a navy which by the year 1925 should be equal to Great Britain's. So thought the experts. But what has the man who happens to be a mere Secretary of the Navy done? This:

> You have arbitrarily limited the Board to a given sum for new construction, and thus have forced it to substitute for this a programme which in reality is not its own, but that of yourself, *a civilian, who as such is wholly incompetent to judge how large or what our naval forces should be.*

In other words, Mr. Daniels, a mere civilian, acting as the agent of President Wilson, another civilian, has presumed to exercise his judgment as to the kind of navy the country needs and will approve of, and is even planning to foist his ideas upon the country through the agency of the United States Senate and House of Representatives, composed exclusively of civilians.

It is well that one inventor should have thus clarified the issue by challenging the principle of civilian control of army and navy which obtains even in Germany and Russia, where war credits are voted by representatives of the people. The issue thus raised brings up the question of the rôle of the expert in relation to governmental problems as a whole, and particularly in relation to the problem of preparedness. As time goes on, we shall hear more and more of the expert; and rightly so. It is a sign of better things to come that the American people, whenever it is perplexed or whenever there is a difficult job to be put through, should be acquiring the habit of going to the specialist. The danger is that in our whole-hearted way of going at things we shall swallow the specialist whole. In our desire to escape from ignorance and muddle we are succumbing to the magic of the expert. It is a pity that so soon in our hunt for facts and efficiency a warning should become necessary against the efficiency expert. But that is the case. It is necessary, not only because there are experts and "experts," but because even the best of experts is bound to work within the limits set down for him by his employer. In the matter of army and navy, that employer is the nation.

What is the prime function of the Naval Board, made up of Thomas A. Edison and twenty-two distinguished colleagues? To give the country as efficient a navy as possible after Congress has decided how large a navy it needs and can afford. The functions of the General Board of the Navy are very much the same. It does not determine the strength of the navy. Given the size as a basis, it is for the General Board to decide as to the proper relation of Dreadnoughts, battle-cruisers, destroyers, and submarines. To the experts we go for the facts. It is right for the General Board to say that it thinks our navy weaker than that of Germany or France or Japan. It is not for the General Board to say that we ought to have a navy stronger than this or that foreign navy. It is within Admiral Dewey's province to point out that our coast fortifications will be insufficient if our fleet is destroyed. It is not within his province to say that consequently we must have a navy equal to the British navy. It is for the nation and its civilian rulers to decide

whether it is necessary to anticipate the destruction of our fleet by the British fleet. It is right for the railway expert to point out that our present army of 100,000 men is, because of inadequate facilities for railway mobilization, equal only to 50,000 men or 25,000 men. It is not for him to say that we must therefore provide against an invasion by the German army or the British army. The possibility of a German or a British or a Japanese invasion ever coming off is one for the nation of civilians to decide.

The expert is only a hired employee. The nation is the employer, and must decide upon the final course of action. In framing a decision the nation will first of all determine the primary purpose it has in view. In the second place, it will balance expert against expert, even when it is a question of determining facts. For the outstanding truth is that even on facts the experts do not agree. The disgruntled specialist of the Advisory Board fears the "landing of the armies of such nations, for which their superior navies could easily clear the way." But we have expert testimony to the effect that there are no such "superior navies"; there is only one superior navy, England's. Admiral Fletcher, in command of our Atlantic fleet; Admiral Badger, his predecessor, and Admiral Winterhalter, in command of our Asiatic fleet, have said that our navy is superior to the German navy. This opinion deserves consideration. Even if the principle of civilian control did not exist as the fundamental principle of civilized government, it would be necessary to create the principle, if only to serve as umpire when experts disagree.

The conscience and the common-sense of the country cannot abnegate their functions before the expert. At his worst he is the magazine and newspaper expert who has seen how horrible war can be in Europe, and therefore feels qualified to speak of Dreadnoughts and battalions. Much better is the man who really knows about Dreadnoughts and battalions, but he, too, is not qualified to speak on diplomacy and international relations. The Chicago expert who decided that a defective baby must not be allowed to live was the kind of expert we do not need. His proper functions ceased when he gave his opinion that the defective baby would grow up to be a defective adult. On the broad issue of life and death he was only an individual. For that matter, it is on record that many of the Chicago doctor's professional colleagues disagreed with him, and that the final decision was left to the "civilian" parents of the defective baby.

CONFUSION IN CONGRESS.

Despite the holiday recess, enough Congressmen are staying on in Washington to give the correspondents hints concerning the legislative outlook. Some committees are informally at work. Bills are being drawn. Sentiment is sounded out and political combinations arranged. And the upshot, as pictured in the dispatches, is not very exhilarating. There are divided counsels. Leaders in either party do not agree on the general policy to be pursued. The only thing admitted on all hands is that Congress is going to spend a great deal of money, and will do it by confused methods, with an immense amount of pulling and hauling and log-rolling, and inevitably with huge waste.

In all this there is probably more than a little exaggeration. The correspondents must, in a dull fortnight, find something to write about, and they have taken the theme of Congressional muddle and grab. But in the midst of much assertion, which may be rather loose, we have one definite fact, which by itself is sufficiently ominous. On Saturday announcement was made that the attempt to establish something like a budget system had been abandoned. This subject, it will be remembered, had been referred by the Democratic caucus to a special committee. Composed of seven men, including the Speaker and Representatives Kitchin, Sherley, and Fitzgerald, it has discussed various plans to give the Government, working through the organization of the House, better control over appropriations. But its conclusion is to recommend no change at present. And what is the reason for doing nothing? Why, Congress has "too much important work before it"!

On its face, this seems very like a staring absurdity. Congress has so many more millions than usual to appropriate that it cannot stop to consider plans for doing it in the wisest way. It is conceded that the system under which a billion dollars is voted has been painfully haphazard and unsatisfactory. But the fact that a billion and a quarter will be voted this session is gravely advanced as an argument why there can be no carefully studied budget. The reasoning seems to be that the bigger sum will involve so much waste and extravagance anyhow that there is no use in trying to save a few millions here and a few there. They would never be noticed in the demnition total.

Doubtless, the special committee did not intend to make so abject a confession of helplessness. Yet its members ought to have seen how the thing would strike the country. An enormous burden of business is to be thrown upon Congress. It involves endless detail, conflicting projects by the hundred, insidious raids upon the Treasury by the thousand. Facing such conditions, business men would say that the first essential was to work out a scheme for tackling the great mass, and bringing order out of chaos. But before such a job it would appear that Congress throws up its hands in despair, and is content to go on dealing with a mighty maze without a plan. Thus the strongest arguments against confusion are turned into new reasons for remaining confused, and even heightening the confusion. The task of analyzing and controlling the national expenditure has suddenly become so much greater and more imperative than it ever was before that we have to give it up and let hugger-mugger continue to reign. Such a lame conclusion is only what we should expect from a Mantalini. We have a right to expect something better from men like Kitchin and Fitzgerald.

As we have intimated, however, it is not probable that they really mean to give up the whole fight for economy. To set up a budget system complete may have seemed to them too formidable a labor to be undertaken at once, yet they may be intending to act upon some of its leading principles. One of those principles, for example, is the need of Government, or Executive, approval of any given appropriation as a whole. We have not the machinery for getting this directly. No Finance Minister can go to the House of Representatives and say openly: "This is the bill the President favors; this other bill he opposes." But we have our alternatives, our equivalents for the methods used in countries with a national budget. President Wilson is not afraid to exert his indirect power, when he thinks it is necessary. There may be whole classes of appropriations—such as swollen bills for public buildings, or too large expenditure on rivers and harbors—to which he will let it be known that he is opposed. In this way he can give his support to chairmen on the floor of the House. But it is in committee rooms, and in the give-and-take debate in the Committee of the Whole House, that the most valiant strokes for common sense and economy in governmental outlay can be dealt. It is hard work. It is, for the most part, thankless work. Not only is constant vigilance required on the part of a watch-

dog of the Treasury, but willingness to make himself disagreeable, to set his teeth in predatory intent. No glory and small praise can be won by such labors, but they are really indispensable. And though the Democratic leaders in the House have given up for the present the plan for a complete and scientific budget, we may still look to them to assert their party authority, and to make use of their official position in order to prevent the spending of $1,250,000,000 of public money from appearing like a game of grab-bag.

BILLS AND THEIR FATES.

Our Legislatures have just had a staggering compliment paid to them. Every bill that has been introduced in any of them during the past year has been recorded, with the date of its introduction, the name of the introducer, a hint of its purpose, and its final disposition, all in a single volume. One would have said that a volume that held all this must put the hugest unabridged dictionary to shame, in size as in dulness. But not so. As "Coin" was fancied to have startled the financial leaders of Chicago by telling them in how small a space all the gold in the world could be packed, so the editors and publishers of this "Official Index to State Legislation" will surprise any who look at it by what they have been able to do in the way of conciseness. A line is given to each bill, and an even hundred bills are dismissed upon the normal page, a skilful diversity of type saving the solid mass from a too monotonous appearance. It is something to be able to hold in one hand all the wisdom and unwisdom of two score Legislatures, but it must be remembered that their worst follies are not to be found in a volume like this. Only Congress is bold enough to print, not merely what it does, but what it says.

The subjects of the flood of bills are as numerous as the greatest lover of variety could desire. On April 9, four resolutions were introduced in the Michigan Senate. The first authorized Senator Hofma to visit the University and the State public school at Coldwater; the second provided for a commemoration of the fiftieth anniversary of Lee's surrender; the third appropriated $27 for some one's services as committee clerk, and the fourth gave the Ford Motor Company permission to take motion pictures of the Senate. All of these were adopted, had been one a month earlier to au- the purchase of a dictionary for the ate. Those who make much of the haste with which our Legislatures transact business should reflect upon the purchase of this dictionary. Although the Senate had met on the 6th of January, there is no record of an attempt to spend the people's money for a dictionary until the 10th of March. By that time, it is only fair to presume, the necessity of such a work had been amply demonstrated. It is Michigan, too, that makes a pretty display of sentiment now and then. Its Senate sympathizes with one of its members in his illness, and congratulates two others upon their birthdays. Nor is Illinois far behind. None of its Senators, apparently, were ill or had birthdays, but its innate courtesy found vent in a resolution congratulating Lieut.-Gov. O'Hara upon his thirty-third birthday, and in others expressing sympathy with members in the loss of a brother, a father, a father-in-law, and a mother-in-law. Surely the destinies of a State are safe in such hands.

Of obviously freak bills, there are very few. An Indiana legislator proposed to prohibit the manufacture of sleighs and bob sleds of which the runners were less than 56 inches apart, and a California Senator introduced a bill which provided for the dissolution of corporations that failed to pay dividends. This bill died in committee. Death at some point on the long route between introducer and Governor was the fate of most of these bills. Sixty-six of the first hundred introduced in the Colorado Senate in January fell by the way, and eighty-one of the first hundred introduced in the House. Most bills that are lost die in committee. Many pass one house, to fail in the other; many are done to death by the cruel method of indefinite postponement. Rarely does one suffer the tragedy of a bill in Arkansas, opposite which is printed the laconic story: "Failed to pass (tie vote)." California was saved from a number of bills by the pocket veto, while Illinois had a penchant for tabling.

Far the largest number of bills relate to public officers, including boards, commissions, departments, and employees. Next come appropriation bills, and some distance behind these measures concerning cities, corporations, counties, highways, schools, and taxes. Optimists will find reason for their faith in the fact that bills on art greatly outnumber those on arson, that bigamy is a much less popular subject than birds, and that libel and slander receive less than half the attention given to libraries. Pennsylvania seems to lead all the rest in the total number of bills introduced, but this may be a false impression, since she is apparently the only State to count as "introduced" in one house bills that have come from the other. Eliminating these, New York must bear the doubtful honor of leading in this branch of legislative activity. Her Senators were responsible for 1,647 bills, and the members of the Assembly for 1,709, a total of 3,356. The Constitutional Convention had 725 amendments before it, first and last. California and Massachusetts press New York in number of bills, the Western State having had about 2,900 and the Eastern 2,800. Alabama, where the Legislature meets only once in four years, had 1,150.

Foreign Correspondence

THE RESULTS OF LORD DERBY'S RECRUITING SCHEME—PERSONAL EXPERIENCES OF A CANVASSER.

By JAMES F. MUIRHEAD.

LONDON, December 6.

The appointment of Lord Derby on October 6 as director-general of recruiting marked two definite changes in our methods of carrying on the war: (1) The abandonment of a casual, haphazard scheme of recruiting for one more systematic and scientific; and (2) a distinct recognition of the fact that the provision of men for the army ought to be separated from the task of equipping and managing them. It is conceivable that a more logical nation would have envisaged these necessities from the very first; but it is also pretty clear that, Englishmen being what they are, our Government would have made a serious mistake in trying to enforce them in advance of public opinion.

In Lord Derby the occasion seems to have quite definitely found the man. He is a typical Englishman, of the Lancashire brand—a clear-headed, straight, blunt, businesslike personality, full of good humor and good sense, indifferent to criticism, and with an adequate comprehension of his fellow-countrymen. Though he has filled Ministerial office, was an excellent military censor in the Boer War, and is said to be one of the most efficient Parliamentary whips the Unionists ever had, he is yet best known as a successful sportsman—a member of the Jockey Club, a good shot, the owner of race-horses. Even his mistakes tend to endear him to his fellows; and his recent frank and unreserved apology to Lord Ribblesdale has only helped to increase his popularity. His direct and unmistakable language is a refreshing contrast to certain Parliamentary ambiguities with which we have lately been treated; and it certainly will not be his fault if any misapprehension remains as to any man's position towards the present canvass for recruits.

The general procedure of the Derby recruiting scheme may be briefly summarized as follows: The Mayor or other local authority is called upon to form a central committee for the prosecution of a canvass for recruits

in the district over which he presides. The central committee appoints directors in each ward to carry on the actual house-to-house canvass, and these directors in turn procure the canvassers to do this. These canvassers are supplied with "white" cards, duplicating the "blue" cards furnished to the local committees by the War Office, and containing particulars as to all the eligible men in their districts who have not yet enlisted; and it is their business to enter, in a space provided for the purpose, the replies of the canvassed men. When these replies express unwillingness to enlist, the reason alleged has to be stated. The way of the canvassers was prepared by a letter addressed by Lord Derby to all eligible men, explaining the situation and appealing to their patriotism. From the results of this "white-card canvass" the military authorities will draw up lists, divided into forty-six groups, of men willing to enlist. The twenty-three groups of unmarried men, arranged according to age (from nineteen to forty), will be called up first. Then the corresponding groups of married men. Arrangements are made for consulting, so far as possible, the wishes of the men themselves, both as to the branches of the army they desire to join and as to their preference for immediate service with the colors or a place in the army reserve. Infantry are specially required, and preference will be given to married men for vacancies in the Royal Army Medical Corps and the Army Service Corps. Special local tribunals have been formed to hear the protests of those who think they have good reasons for not enlisting or for being relegated to a later group; but to get the advantage of these tribunals a man must have appeared for attestation before the military authorities.

An immediate effect of the promulgation of Lord Derby's scheme was the flocking of young men to the recruiting offices before the canvass actually began. Lord Derby's letter seems to have convinced them that the country's crisis really was serious, and that this would probably be their last chance to volunteer. At least this was the case in the district in which your correspondent took a share in the direction of the campaign, and it seems to have been a pretty general phenomenon. Volunteer canvassers presented themselves in adequate numbers, and as a rule proved themselves men of discretion and common-sense. As a matter of fact, no resentment whatever seems to have been shown to their inquisitions; and the case of a Welsh miner, who was sentenced to a month's imprisonment for the too material nature of his answers, remains unique.

The canvass is not yet quite at an end, and it is too early to formulate a definite verdict as to its success. If, however, I may take my own district as typical, and venture into the dangerous region of prophecy, I should be inclined to say that men enough are coming forward voluntarily to carry on the war for a considerable period, possibly for as much as a year more. This opinion must, however, be qualified by the fact that we have not been definitely informed just how many men are wanted to effect this end, so that my guess may be fairly accurate as to the number of men obtained, and yet wide of the mark as to the time the supply will last. In any case, Lord Derby's canvass will have very decidedly paved the way for conscription, whatever be the real *portée* of the words I italicize in the following quotation from Mr. Asquith's speech of November 2: "So far as I am concerned, I should certainly say the obligation of the married man to enlist ought not to be enforced or binding upon him unless and until—I hope by voluntary effort *and if not by some other means*—the unmarried men are dealt with first." The latest announcement of Lord Derby declares that so far the campaign has not been quite so successful as he hoped.

The general result of the canvass shows very few men ready to put themselves on record as absolutely unwilling to fight for their country. The conscientious or positive objector is rare; most of the reasons assigned relate to difficulties that might conceivably be met by legislation or otherwise. In many cases "unfitness" simply means alien birth. In our district no fewer than twenty-seven alien nationalities were represented, including eight Americans and eleven Germans. The employer sometimes gives more trouble than the man himself; but this obstacle will be dealt with in due course, and with short shrift. On the whole, the British patriot has good reason to feel proud of his younger fellow-citizens; but perhaps the deepest impression is the pathos of these white and blue cards, with their tales of scanty professional incomes, struggling little businesses, numerous dependents, and feet just planted on the first rung of the ladder. More and more was it borne in upon one that some provision must be made for the wives and children of such men, which, in the case of their bread-winner's death, would save them from the descent to a lower standard of comfort and culture. The men of private means risk their lives; but these men risk not only their lives but the well-being of their dependents. Something, not inconsistent with democratic equality, must be done to meet such cases. Somehow or other, the superfluity of the wealthy must be used to equalize the risks of the men who combine in their own person both their lives and their capital. Conscription of property is logically bound up with conscription of body; and we have to face this problem. Government has been preaching economy to us; but we need some more spectacular sacrifice of property on the part of our potentates and plutocrats than has yet been vouchsafed. The fine spiritual attitude of France is symbolized in the simplicity, unpretentiousness, and unselfishness of Gen. Joffre; but England is still waiting for the dominating figure that will equally incorporate the best British characteristics in this time of stress.

FRENCH ARGUMENT IN AMERICA'S CASE—THUS SPOKE CLAUSEWITZ.

By STODDARD DEWEY.

PARIS, December 11.

In the case of the United States vs. Germany, a leader writer in the Paris *Temps* has produced something which may be taken as solid reasoning or as logical exercise, according to the reader's temper. I have tried to compress its length into the usual form.

The starting-point in principle is Clausewitz's definition of war—"an act of violence to compel the adversary to accomplish our will." To this, in 1871, another German philosopher of war, Adolf Lasson, added that the state of war does not necessarily imply diplomatic rupture, but may "keep up negotiations to which it gives a basis by showing in facts the reciprocal relations of the two powers." So, to achieve the end of war, it is not at all necessary to crush the vanquished as by an invasion, "so long as the party with whom you are making war submits to your constraint and threat and *intimidation*." Moreover, "whatever your adversary cedes as a consequence must enable you to create a new legal status between the two nations."

Taking this as a major premise, the concrete instances to form a minor are found in what has been happening between Germany and the United States.

(1.) Did Germany, that is, the German Government, acting through the intermediary of agents known to it and for whom it is responsible, exercise "acts of violence" on the United States, that is, on the goods or persons of citizens of the United States?

(2.) Did such acts of violence, even when local or isolated, have for their aim to exercise on the Government of the United States moral constraint or menace or intimidation, so as to lead it to make concessions of a nature to create a new legal status between the two nations?

The answer to these questions must be sought in the facts of the case.

From the Lusitania to the Ancona, there were American victims on ships torpedoed against all the rights of nations. Yes or no, were they killed by German war engines or marines with the aim of bringing pressure to bear on the American Government so as to induce it to *cede* a part of its sovereign right to assure the free circulation of its citizens on all seas?

Mills have been burned; ships have been endangered or sunk by engines laid in American waters; strikes have been declared in factories of arms, munitions, and military equipment, and there have been individual acts of violence on the very soil of the United States. Yes or no, were these acts of violence committed by or for persons who keep their German or Austro-Hungarian nationality? And had such acts for their aim to bring to bear on American manufacturers, shippers, or bankers material or moral pressure of a nature to injure the liberty of their acts—a liberty guaranteed by the sovereignty of the state, whose first duty it is to assure public order and enable its citizens to exercise, at home and abroad, trade which is not contrary to law or international treaties?

In sum, yes or no, did these acts of violence have, to the knowledge of the German Government, for their aim, even though disavowed, to interfere with the exercise of its sovereignty by the American Republic—or any one of the States which constituted the Republic—the better to secure respect for their rights abroad?

The French writer does not pretend that the answer to these questions belongs to any one but citizens of the United States. Peoples, like individuals, can always cede a part of their rights, even from simple fear of a stronger power. And peoples, like individuals, may find good reasons with which to mask that sacrifice of their self-love which their prudence dictates. This should not prevent the drawing of the logical conclusion of the case.

"Every impartial mind will acknowledge that Germany has carried on against the goods and lives of American citizens a series of acts having for their well-determined

aim the intimidation of the Government of the United States, with a view to constrain it to accept certain exigencies of German policy."

Now this answers exactly to the definition of war given by German authorities like Clausewitz and Lasson, no matter how occult the acts may have been or how officially disavowed, yet effective and serving the Imperial will. For, in the German theory, the state of war does not consist in the *exchange* of violence between two or more states, but in the simple *exercise* of the force of one state to the prejudice of another which it wishes to dominate.

"Examine attentively what is passing before our eyes between the two great Powers which are keeping up a 'conversation' across the Atlantic. There can be no doubt that, under an official exterior of peace maintained by Germany, there is a situation of fact constituting on the part of Germany this veritable state of war. Although not declared, it has none the less costly and murderous consequences, with this peculiarity—the resulting losses strike exclusively American riches or lives, without anything to balance these losses on the side of Germans."

This, if you will, is a new and occult fashion of making war, like "larvated" disease; but it exists in spite of all official protestations. The French writer goes on to compare it with a peculiar kind of strike organized in late years. This consists in the systematic disorganizing of factories or mills by methodical *sabotage* of the products manufactured or even of the instruments of production.

The ordinary strike has its force from collective action. This new kind of strike works hiddenly by isolated acts committed by nameless individuals. This aids that, and it has been hailed as a step forward in Syndicalist conflicts. It has taken the name of *grève perlée* ("drop-by-drop strike"). So this new German method of making war gives us a "drop-by-drop war." But it is very real, and, as Lasson explains elegantly, "it is a state of war which does not involve the breaking off of diplomatic negotiations, but only adds to them certain new modalities!"

In fact, it reaches the end and aim of war, for this is accomplished, he says, when the other party (in this case the United States) "is subjected to the constraint, the menace, and the intimidation of its adversary" (in this case Germany). Unfortunately, in this case also, it fulfils the final cause of war in the German sense: "Whatever the subjected party cedes as a consequence must be sufficient to create a new legal status between the two nations."

The French writer has not gone into certain obvious questions: What effect will the cession of United States' rights to German demands enforced by this drop-by-drop war have on future American relations with other nations? What will be the effect of precedents thus created on the recognized international law of the future?

So far, as has been also remarked in France, Washington has been guided in its relations with England during the present war by very close adherence to the legality existing at the close of the American Civil War. If it should be possible to form a plausible body of international law from old remnants left unshattered during the present war and from new elements recognized at its close, this precedent of an undeclared drop-by-drop war will have to be borne in mind.

THE SIX HUNDREDTH ANNIVERSARY OF MORGARTEN.

By ARCHIBALD ALEXANDER.

GENEVA, November 30.

The six hundredth anniversary of the battle of Morgarten—the Swiss Bunker Hill—was celebrated with simplicity on Monday, November 15. It was thought that the independence and freedom of the nation were sufficiently manifest in the long lines of the gray-clad army which guards the frontier from the Jura and the Rhine to the Italian Alps. The village of Schwytz, about twenty-five miles from Lucerne, has never been a resort for tourists. It is, however, the capital of the canton, it was the centre of the events which culminated in the expulsion of the Austrians from Swiss territory, and it is the favorite point of departure for those who take part in the festival on the field of battle. One leaves the railway at the station, Schwytz-Seewen, on the Gothard route, and, taking the tramway, arrives in a few minutes at the village. The Sunday evening before the ceremonies was stormy. Snow covered the neighboring Mythen Mountains and swirled through the long street. Neither in Schwytz nor in Uri and Unterwald, the other original cantons, were the customary fires lighted on the mountains; but every window was illuminated, the bells were ringing, and the inns seemed too small to lodge the many visitors.

On Monday morning there was a salute of twenty-two guns, one for each of the Swiss cantons. Shortly afterwards a special train took the invited guests to Sattel, in the immediate neighborhood of Morgarten; but many, starting earlier, in spite of the falling snow, walked the six miles by the Schlagstrasse which leads over the hills from one village to the other. Not far from Sattel, on the hillside, is the small church of St. Jakob, built in memory of the battle. Close by in the open air had been placed an altar, before which were wooden benches for the civil and military authorities. The crowd made its way through the snow to this shrine where the patriotic and religious service began. After the singing of the "Schweizerpsalm" by a large chorus of men's voices, and a sermon by the Chamberlain Marty, mass was celebrated, with music by a military band and the singing societies, and at the close the assembly of nearly three thousand people joined in the Swiss national hymn, "Rufst du, mein Vaterland."

During the celebration of the mass the snow stopped falling, and at the close the sun was shining. The people passed in procession to the parish church of Sattel, amid the sound of cannon and bells. In bright relief upon the snow could be seen the modern uniforms of soldiers, and following these were descendants of those who fought at Morgarten, wearing the military garb of the fourteenth century. In the midst of the crowd might be seen the Federal and cantonal flags, and especially the historic "fanion" around which the confederates once rallied to achieve their victory. In the church a Te Deum was sung, which brought to a close the religious and more sentimental ceremonies of the day. Among the groups of men, especially among the mountaineers, with their armor and halberds, were faces which recalled those to be seen in the tapestries and paintings of the old Swiss monasteries and castles.

It would be hardly worth while to write of the simple pageant at Morgarten, near the Schwytz Mountains, were it not that the ceremony has a new significance in the present hour. As it was in the fourteenth century, so it is now, that Switzerland is in peril from its mighty neighbors. There is a noisy Pan-Germanic press, which tells the Federation that the interests of the Allemanian cantons are those of the Central Empires. There are also some in the French cantons who fear that unless their 500,000 bayonets are arrayed on the side of the Allies, the Swiss will become the vassals of Germany. But outside the larger towns, with their cosmopolitan and shifting population, there is a Swiss nation which is indifferent to the blandishments or threats of its neighbors. The Swiss have seen worse days than these. They have no ambition to extend their territory, even if that were possible. And the people as a whole, in its passion for independence, does not greatly differ from the men who took the oath at Grütli, and conquered the Austrians at Morgarten. For the present it is the Red Cross of Geneva which excites the enthusiasm and sympathy of the people. But the white cross of the Swiss ensign on the background, which is the color of blood, will never be carried into battle except in defence of Swiss neutrality and Swiss independence.

Notes from the Capital

WILLIAM HOWARD TAFT.

Five Federal judges—two of them, I believe, appointees of President Taft—chanced the other day to meet at a friend's house, where the conversation turned upon Mr. Taft's present activities. They were unanimous in their opinion of the value of the service he was doing the country by his temperate public discussion of current history from the point of view of one who had recently had much to do with making it. Then one of the party threw out the query: "If he is so competent to advise others, how came he to make no better showing for himself?" The rest shrank slightly from putting into words the thought that was in their minds, till one drew forth a chorus of assent by remarking: "He had too judicial a mind." And forthwith followed a round of stories of the ex-President which, if told of any ordinary citizen, would have been accepted as evidence of his insincerity of character, but which a psychologist would construe as a sign of an abnormal terror of making a mistake—a trait which causes so many good men to come to ground between two stools.

The weakness is an amiable one, doubtless, but it has cost Taft more friends than all his other amiable traits have won for him. Human nature is so constituted that the man of honest purpose who goes ahead, doing his best for the hour, but leaving Providence to look out for the loose ends, will bind his fellows to him by stronger ties, regardless of his many blunders, than he who

never finishes weighing the two sides of any question. Probably down at the root of the difference lies the fact that lack of self-confidence begets mistrust in others. Graduating from the bench into the executive field, Taft carried his judicial habit so far that no one dared accept as final the decisions he had reached at bedtime, lest he should change his mind before the next daybreak. A judge, it may be, could afford to shift position in this way, because it is part of his duty and training to keep his conclusions to himself till the time arrives for their official promulgation; but Taft, after he had thrown off the conventional restraints of the bench, acquired a bad habit of thinking aloud, as it were; and a frankness which under other conditions might have been regarded as a positive virtue became almost a vice in a President who, with such enormous responsibilities resting on him, would let it be known to-day that he had settled upon one plan or policy, only to reverse himself completely to-morrow, even though the overnight change were the fruit of more mature deliberation.

Another and very serious shortcoming in Taft as President, having its source in his judicial experience, was his tendency to sudden and impulsive retorts upon whoever happened to offend him. Here was the arbitrary power of the judge to punish contempt, exercised far away from the courtroom. He could not throw the offenders into jail, perhaps, but he could pass a summary moral judgment upon them, without giving them a chance to correct his misunderstandings. The sort of candor he was so proud of visiting upon others he could not brook when turned upon himself, and his sensitiveness was so keen that he would imagine an adverse criticism where none had been made or intended.

Now, however, the situation is once more altered. Taft is neither held in restraint by the traditions of a court nor impelled to an unwonted promptness of decision by the pressure of an administrative routine. He has no personal following to insist, as Grant's did in 1880, on his shaping his words and conduct with a view to reëlection, nor is he faced with a national financial or economic crisis which can be met by his party only under his direct leadership, as was Cleveland in 1892. The constant demand upon him for addresses to be delivered to one or another body of his fellow citizens affords a natural and unobtrusive outlet for any of his opinions on public affairs which he thinks might fit the needs of the moment, and the independence of his position before the country is a sufficient guarantee that these opinions are not tinctured by any ulterior motive. In spite of a few strong native likes and dislikes, Taft's detached judgments are apt to be fair and sane; and their forms of expression are pretty carefully thought out nowadays, for the lesson of the Winona speech, dictated to a stenographer between stations on a railway journey, has left too deep an impress on his memory to permit of his ever falling into that particular error of carelessness again.

In Taft's example we may read the best possible answer to the once haunting question: "What shall we do with our ex-Presidents?" The younger Adams answered it in his way by coming to Congress and helping to make laws for his successors to execute; the old Virginia triumvirate lent much time and thought in their retirement to the upbuilding of the institutions of their State; the Harrison of our generation resumed his law practice, and pleaded his country's cause successfully before an international tribunal; Hayes renewed his early associations as a friend among friends. Taft has effected a rather clever combination of private and public employment. His professorship at Yale brings him into close touch with the rising generation, the trend of whose thought he can influence for reasonableness; while his ready response to calls from all over the Union, for occasions which will assure him a large audience on the spot and a yet larger one through the press, enables him to interpret for the American people many of the political and social omens of the day, the full significance of which might otherwise be overlooked or misapprehended.

TATTLER.

The Rejection of Consciousness

THE MEANING OF SO-CALLED REALISM, AS ILLUSTRATED IN THE NEW REALISM OF CONTEMPORARY PHILOSOPHY AND THE REALISM OF FICTION.

By WARNER FITE.

In the following I shall venture the suggestion that the motive underlying the so-called realism is a distaste for consciousness, and especially for the humanistic implications of consciousness. I shall illustrate the point by reference to the "new realism" of recent philosophy, with a side-reference to the realism of fiction.

I.

The new realism was formally presented to the world in 1910 in the form of a "Platform" signed by six philosophers of Harvard, Columbia, and Princeton. Among the purposes of the platform was the laudable one of emancipating a bored philosophical world from a bondage of more than two centuries to the obsessions of "epistemology." The chief of these obsessions, which we inherit both from Descartes and from Locke, is the idea that we are certainly in possession of our mental states, but only doubtfully in possession of the objects supposed to be represented by them. As a result of this obsession, we find ourselves in the position of a man who holds an elevator receipt for wheat, which he may exchange for a similar receipt—for wheat or for gold, or what not—but which can never be made to produce anything but another representative document. Is there, then, an external or "real" world? The question seems hopeless. Either the problem is meaningless or the assumptions need to be revised. The new realists have undertaken to revise the assumptions.

But not content with destroying "epistemology" by forbidding all discussion of the theory of knowledge, the new realist extends his attack to "idealism." Every one has use at times for some term of malediction. I have heard of a little Quaker boy who called his antagonist "a nasty little You." A new realist would have called him an idealist. And in his view idealism is exhaustively defined in the statement that "the being of things is their being known." This doctrine has usually been distinguished by philosophers as "subjective idealism." It is also a question whether the history of philosophy affords an example of a philosopher who has subscribed without qualification to the subjective limitation. Berkeley, who usually plays the part of "the idealist" in the neo-realistic drama, appears to have been less interested in denying the existence of things independent of our perception than in proving that they could not be "inert" and "unthinking" things. Nor does it appear that, if we deny that the being of things is exhausted in their being known, we must affirm that being and being known are unrelated. What happens to a thing in being known is a nice and complicated question. The new realist is, however, averse to complications, and finds it simpler to leave knowledge out of the question.

And since knowledge is included in the more comprehensive conception of consciousness, it will be still simpler if consciousness as such can be reduced to a position of insignificance, or, perhaps, of nonentity. This is the point at which the neo-realistic argument against idealism and epistemology is reinforced by the argument for the relational theory of consciousness. So far as I know, the origin of the relational theory is to be found in an essay by William James, bearing the suggestive title, "Does Consciousness Exist?" It is a rather curious reflection that, while most modern philosophy assumes as beyond question that we know our states of consciousness better than we know the things of which they are conscious—a view which also seems inescapable to the first reflections of common-sense—yet few persons even pretend to tell us what a state of consciousness is. We know what a table is, but what is an idea of a table? And how does it differ from a real table? James answers the question by telling us that in substance there is no difference. Our experience yields us but one kind of table, which has to serve both as idea and as real table. It is then one or the other, according to its "context" or relations to other items of experience. Thus (to change the illustration) a pile of building material may be followed immediately by the vision of a house; or the house may come some months later as the final term in a series of causal transformations necessary to convert the materials into a house. In the first relation both materials and house are states of consciousness; in the second they are objective facts. Apart from these relations, they are neither; in the language of neo-realism, they are "neutral entities."

According to this view, consciousness—that is to say, you and I—is merely one of countless possible "relations" in an impersonal world of neutral "experience." With regard to the precise character of the consciousness-relation, neo-realistic opinion is

divided; and the variety of formulation leads one to suspect that the difficulty of defining consciousness as a relation has been slightly underestimated. By one wing, apparently the left wing, consciousness is defined, somewhat darkly, as a relation of "meaning." The bricks and stones may actually form a house, or they may also "mean" a house—which appears to involve the mystical conclusion that bricks and stones have minds of their own. According to the right wing, bricks and stones become facts of consciousness when they are responded to in the "specific manner" of an organism having a nervous system; for example, to say that a brick has become part of consciousness may be only to say that somebody has picked it up. This is in accord with the new fashion of treating consciousness as "behavior." But what may be the "specific manner" of response peculiar to living organisms, is not precisely defined. If it should turn out to be merely an intelligent manner, the work of defining the conscious relation would be still to be begun.

I have in mind a lad whose mother, wishing to let him down gently, told him that, while Santa Claus was not a real person, yet the term might fitly be used to refer to the spirit of brotherly kindness supposed to pervade Christendom annually about the 25th of December. The boy's version, as overheard later, was to the effect that Santa Claus was nothing but a "rotten old spirit." I fear that, in a similar fashion, many naïve persons will accuse the neo-realists of making us nothing but rotten old relations. And they may also suspect that the term "relation" is only a pleasant way of telling us that, like Santa Claus, we really do not exist. This suspicion may be strengthened by the realistic insistence upon the point that consciousness is a rather casual relation, certainly not more significant than any other relation that might be named; and perhaps by the subsequent reflection that the typically relational beings are the man in the moon and the bear in the heavens—from which the relations constituting ourselves appear to be in no wise different in kind. But if any doubt remained, it has been dispelled by Mr. Holt, who in a recent essay has told us that the mission of the neo-realists was to "abolish" this subjective nonsense about "consciousness."

How shall we explain this aversion on the part of supposedly conscious beings to the fact of their consciousness? The answer may be found, I think, in the uncritical reverence displayed by the neo-realists for natural science. Far from accepting the traditional rôle of the philosopher as the critic of science, the new realist aims to win intellectual reputability for philosophy by adopting the scientific point of view. Now, from the standpoint of natural science, consciousness is a peculiarly exasperating fact, a fact seriously disturbing to the scientific unity of the universe. The phenomena of animal life may plausibly be reduced to phenomena of chemical change; and the nervous system may then be invoked to perform all the functions of thought. But any admission that these functions are also self-conscious presents an ominous difficulty, amounting, indeed, to an admission of the supernatural. For, if the standpoint of those who are conscious be taken into account, it appears that our knowing what we do involves nothing less than an interference with the course of nature. It is therefore simpler (and for science the simpler is always the truer) to banish consciousness from the realm of positive facts and to treat it as an "epiphenomenon." But it will be still simpler if consciousness can be evaporated by definition into a merely casual relation. And this is the service undertaken by the new realism.

II.

The new realism is philosophy in the pose of natural science. If we turn to the realistic novel, we find art in a similar pose. The *roman expérimental* is fiction equipped with all the apparatus of scientific method, a technological vocabulary, a carefully compiled list of facts (only the bibliography of sources is wanting), a disavowal of all theoretical preconception, and a sublime contempt for all human interests—with the honorable exception of sex. To dwell upon this aspect of realism would be to repeat much that has been admirably said in a recent article by Prof. Stuart Sherman. I shall therefore content myself with pointing the analogy.

Historically, the realistic novel is a protest against the older romantic novel with the happy ending—which was always the reward of virtue. The romantic happy ending was due, however, less to the natural productiveness of virtue than to some rather irrelevant beneficence on the part of nature or the social order. Now, such a consummation implies that the world is a moral order; indeed, a supernatural order. Yet the supernatural is not finally disposed of by the elimination of happy chance. What if, by the exercise of moral courage, intelligence, and foresight, virtue may produce its own reward? This implies the efficiency of consciousness. And this, as I have suggested, is still, from a standpoint strictly naturalistic, to admit the supernatural.

Accordingly, in the strictly scientific novel, consciousness is made ineffective. Either the characters are preternaturally stupid, like the husband of Madame Bovary (and French husbands in general), or they are persons of unusual intelligence whose powers of action are obstructed by introspection. In Russian realism it seems that every one who is not a clod is, like Turgenieff's chance-acquaintance, a Hamlet—"of the District Tschigri" or some other district. Dmitri Roudine is uncertain whether he is a hero or a humbug. Neschdanoff, in "Virgin Soil," is a nihilist who discovers in the end that his nihilism is merely æsthetic. Even honest Bezukhov, in Tolstoy's "War and Peace," is haunted by a constant sense of not meaning what he says. All this may perhaps be true of Russian character. But it seems that in English realism intelligence is similarly inefficient, and indeed especially prone to disaster. Hardy's "Return of the Native," for example, is a tragedy of seemingly trivial errors. The dominant note of literary realism is the helplessness of man before the accidents of events; and in the realistic world events always go wrong.

So uniformly, indeed, as to suggest that the dice may be loaded; or perhaps that a *diabolus* may have taken the place of the romantic *deus ex machina*. Following the young Lucien de Rubempré through several volumes of his sordid career, we hope, of course, to see him win in the end, if only as a fair return for reading so much about him; just as he is about to grasp success, Balzac destroys him by a single moment of self-forgetfulness. In "The Return of the Native" a rather hasty misapprehension sends Yeobright's mother to her death; a little later, the wife, Eustacia, would have been saved, had she chanced to see Yeobright's letter. In "A Pair of Blue Eyes" we find a rejected and a repentant lover meeting on their way to a reconciliation with the same beloved, both then to be confronted with her dead body. All of this is more suggestive of a bad dream than of real life. In my own experience, the world of inexplicable mischance, in which we play the part of paralyzed spectators, is the world of nightmare. And when I note the occasions in daily life when nature and circumstance seem most overpowering and inevitable, I find that they are the times when thought is dull and the brain is weary. It strikes me as significant that much of Hardy's world is the semi-hypnotic world of his brooding and mystical heroes, the world, not of clear consciousness, but of semi-consciousness.

For in waking life it seems that our consciousness of living does enable us more or less to control the order of events; just so far, indeed, as we have a clear grasp of our situation and a clear self-consciousness with regard to our motives. The world of real living is not inevitable nature, but nature more or less responsive to our purposes. *Natura parendo vincitur;* by coming to terms with Nature we make use of her; and the resultant real world is the fruit of a transaction between two parties. The fault of the happy ending of old-fashioned romanticism was not that it was happy, but only that it was gratuitous; there was no transaction to support it. I have in mind, for example, Octave Feuillet's "Roman d'un jeune homme pauvre"—the story of the young and impoverished marquis who is too proud to propose to the wealthy maid while he himself is without fortune. The problem seems insoluble. But happily an apparently worthless legacy turns out to be worth millions. This, of course, is merely stupid. And it is wholly unreal. Yet it is equally unreal to suppose that if man and maid are quite in earnest, they are going to be deterred by the etiquette of fortune. In real life love usually finds a way; and the happy ending is both the logical and the natural conclusion. In real life no romance is shattered once for

all by the fact that the young lady is not at home when the young man calls primed for a proposal. Obstacles are overcome by ingenuity. The task of the novelist is then to provide the ingenuity, and to make it a logical and clearly motived ingenuity. To solve the problem by a *deus ex machina* or, on the other hand, to treat it as essentially insoluble—both courses are alike unreal. The realism that chooses the latter is no truer of actual life than the romanticism that chooses the former. Such realism describes life, not as life is, but as it ought to be from the standpoint of natural science.

III.

A similar situation confronts us when we return to the realism of philosophy and science. Realism claims the special support of common-sense, assuming, evidently, that common-sense is both simple and clear. But we need only glance at the common notion of real to perceive that it is complicated by at least two motives. If anything is to be called real (rather than merely imaginary), it must be in some sense independent of the person who perceives it; that is, it cannot be wholly his own creation. On the other hand, nothing can be called real which is not in some sense, actual or potential, a part of our immediate human experience. And an experience is called "very real" when it is a vividly conscious experience and gives us a sense of close contact with the object.

Realists appear to assume that common-sense will be satisfied with exclusive emphasis upon the objective motive. Realistic science, in particular, which is the model for realistic philosophy, claims the special merit of having emancipated the objective reality from all human interpretation. The first thing that a novice in science learns is to forget that nature is offended by a vacuum or that the iron loves the magnet. Realistic science then goes further and emancipates the reality from human perception. The novice learns that what he took to be color or sound is really only vibration; that heat is really motion; that, indeed, nothing is "really" just what it is perceived to be. This apparently solid matter turns out in the end to be a collection of countless independent atoms, which a popular imagination takes to be so many colorless (*i. e.*, gray) microscopic billiard-balls, but concerning which it seems that science can tell us nothing that is intelligible in terms of concrete experience.

But a reality wholly unrelated to experience is a little more than even realism asks. Such a reality savors of "metaphysics." Now, therefore, we learn that science is especially distinguished by the fact that she alone keeps close to actual human experience. It now turns out, somewhat unexpectedly, that matter and energy, atoms, ether, and vibrations, were not real atoms, or what not, but only so many shorthand formulæ for stating the order of events in experience. In a word, science is nothing but a record of what we perceive. But lest this should appear to imply an abandonment of the objective principle, we are carefully informed that the character of what we perceive is wholly unrelated to the fact that *we* perceive it. In other words, realism, in rejecting "metaphysics," still stands for the unvarnished fact.

As I prefer to put it, realism stands for denatured human experience. For without denying that something is meant by an unvarnished fact, it strikes me that the phrase as it stands expresses a contradiction in terms. I may distinguish the fact as presented in your varnish from the fact as it appears to me, and thus, by allowing for your varnish and for mine, procure for the fact some measure of independence. But a fact without any varnish whatever seems to me, if facts are to be related to perception, to be no fact at all; and how the world is to be described from nobody's point of view, I cannot imagine. When I try to state facts in this fashion I find myself in difficulty. The chair, for example, is the favorite philosophical illustration of a very solid fact. Yet when I attempt to describe the chair, I am confronted at once by arms, legs, seat, and back—terms that express a human prejudice; and when I try to dehumanize my description, I seem to find no terms that would make the chair recognizable, none that do not seem to transform a familiar human fact into something rather "metaphysical."

And if it be objected that my way of knowing, or of describing, the chair leaves the real chair untouched, then I am compelled to wonder what that particular reality would be in a world that knew nothing of chairs—in a primitive world, for example, where every one squatted. Something real, I do not doubt; yet still something intelligible, intelligible now from the standpoint of primitive life. If an automobile would cease to be an automobile in a world without carburetors, I cannot see how it could remain an automobile in a world without chauffeurs. When I try to conceive what that reality would be which is wholly unaltered by being known—to distinguish what the chair is in itself from what it becomes when known to be a chair, the cold fact from the humanly familiar and effective fact—I seem to find nothing but that metaphysical, atomic chair—the chair as varnished by the scientific point of view—which is not "really" a chair and is only doubtfully known.

It seems, then, that to be a realist is not so simple a task as it appears. We live in a world which we have surely not originated, a real and not a merely imaginary world; and, on the other hand, we live in a world which, just in being real, is more or less familiar and (strangely) more or less responsive to our efforts, and which, in its familiarity and responsiveness, reflects at every point our human point of view. In a word, the real world, for philosophy as well as for literature, is the fruit of a transaction between two parties; and a realism in which either of the parties is ignored is a mere pseudo-realism.

Book Notes and Byways

THOMAS DALE, AN EIGHTEENTH-CENTURY GENTLEMAN.

Epilogue to the Recruiting Officer, *written* by THOMAS DALE, M. D., *and spoken by Silvia in Man's Cloaths, at the Opening of the New Theatre, in* Charles-Town *in* South Carolina [February 12, 1736].

In truth, dear ladies! 'tis a curious matter,
To prove, *Tiresias*-like, *a double nature;*
To bid farewel to petticoats and stitching,
And wearing breeches, try their force bewitching;
From belle to belle with janty air to rove,
Play idle tricks, and make unmeaning love;
With scandal and quadrille address the dames,
And strut the fair ones into wanton flames.

But faith! I pity *Rose,* poor willing tit,
Of all her joys, and promis'd transport bit;
Her eager amorous soldier prov'd at last,
As *Cynthia* cold, or *Farinelli* chast! . . .

Thus far the bard;—but sure the stupid rogue
Ne'er wrote before, or ne'er wrote epilogue;
For young performers no excuse to frame!
To your indulgence lay no artful claim!
I'll beg myself then;—Pray forgive our fright;
Think, ladies, on the fears of a *first-night;*
Kindly accept our faint, tho' willing toils;
Withdraw not from us your accustom'd smiles;
Nor mark how ill I personate the rake;
But spare *Jack Wilful* for *Monimia's** sake.

Such, with the omission of three lines of questionable taste, was the "occasional" poem recited at the close of the initial performance in the first regular theatre of Charleston. "The Recruiting Officer," a vivacious comedy by George Farquhar, was revived by the Stage Society of London last January, and called forth an interesting comment from Mr. William Archer in a succeeding issue of the *Nation.* With their jaunty spirit, so well in tone with the lines of Farquhar's play, the verses deserve publication where they are found, in the London *Gentleman's Magazine* for May, 1736. This magazine, which was soon to give employment to a struggling young literary genius by the name of Samuel Johnson, numbered few Americans among its contributors. Now one will scarcely believe that these lines resulted from their author's first and only courtship of the muses, or that "the stupid rogue" would charge himself with never before having written epilogue, unless the charge were untrue. And yet we shall probably search for Dale's name in vain through the promised "Cambridge History of American Literature," and also through numerous volumes, specifically devoted to "Southern Literature," and even to South Carolina writers. On the other hand, this early American physician has obtained casual mention in almost every history of his State, and has furnished material for the special student on more than one count. It is time, then, that somebody attempt to gather various items about Dale that have strayed into print, and to construct a brief biographical sketch.

Concerning Dale's birth we know nothing except that his father was "Mr. Francis Dale, apothecary in Hoxton, England." (See an article on the Brewton family by A. S. Salley in *South Carolina Historical and Genealogical Magazine,* II, 139, from which most of this

*In a footnote Dale explains that the actress who played Silvia, or Jack Wilful, in this comedy and spoke the epilogue, "had acted Monimia [in Otway's tragedy of 'The Orphan' the previous year] with great applause" from the Charleston audiences. See the *Nation,* XCVIII, 464.

genealogical material is derived.) But by the spring of 1733, as two chance items in *The South Carolina Gazette* inform us, he was practicing his profession in Charleston and had wedded, in the aristocratic Saint Philip's Church, "Mrs. Mary Brewton," daughter of Colonel Miles Brewton, a prominent and wealthy Charlestonian. Near the end of the same year he earned some right to historical fame. A petition of Chief Justice Robert Wright, of South Carolina, to the British Board of Trade in London, dated December 17, 1733, complains of a certain act passed by the Provincial Assembly to regulate the courts of the province. "The Governor under the said Act," says Wright, "has lately granted commissions [as assistant judges] to Thomas Deale and Thomas Lamboll, esqrs., persons entirely ignorant of the laws, who assume an authority of over-ruling petitioner, in all judicial acts which they think proper, &c." ("Collections of the Historical Society of South Carolina," III, 304.) From other sources we learn more of the nature of this quarrel between the Chief Justice, on one side, and the Governor and the Assembly on the other. It seems that several decisions of the Chief Justice touching the ownership of certain lands in the province had displeased Gov. Johnson and his friends. Thereupon the Governor, under the statute mentioned, had appointed two laymen as assistant judges to serve without pay, but to have equal voice with the Chief Justice in the decision of cases. (See Smith, "South Carolina as a Royal Province," pp. 128, ff.) Later the obnoxious act was repealed by royal order, but Dale served as assistant judge for at least six years more. On the death of Wright in 1739, Lieut.-Gov. Bull, then acting as Governor, gave a special commission to Dr. Dale to preside over the Court of General Sessions *pro hac vice*. Bull desired to appoint Dale as regular Chief Justice, but his Council objected, and Benjamin Whitaker, a lawyer, was named instead.

The record of Dr. Dale's services as a jurist is not completed here. More responsibility was attached then than now to the office of justice of the peace in Carolina. For example, two justices of the peace sitting with three freeholders had the right for certain crimes to condemn slaves to capital punishment. Moreover, it is recorded that the Chief Justice, all the assistant judges, the members of the Governor's Council, the Speaker of the House of Commons, the Attorney-General, and numerous other citizens were duly commissioned justices of the peace in March, 1737. This office Dale held for many years, and not a few notices in the *Gazette* chronicle his sentencing slaves to hang for burglary or impounding stray horses or cows, in his magisterial capacity.

He was likewise in 1734 elected steward of Saint George's Club, an exclusive social and charitable organization that had been formed two years before, was at one time a member of the provincial Assembly, and served two terms as one of the three "commissioners of workhouse and markets." The workhouse, the place of detention for captured runaway slaves, was situated at some distance outside the town limits; the "new" Charleston market Dale and his fellow-commissioners placed on the present site of the City Hall, just across Broad Street from St. Michael's Church.

The domestic experiences of Dr. Dale must have been varied. A son, Thomas, was buried October 17, 1736, and an infant daughter, Mary, was buried with her mother in one coffin May 25, 1737. On November 23, 1738, he married Anne Smith, who died, apparently without issue, in January, 1743. On June 30 of the same year he took a third wife, Hannah Simons, who with three children survived him. One of these children, Thomas Simons, seems to have been the Thomas Dale, M.D., whose life is sketched in the "National Dictionary of Biography," and who was undoubtedly a son of the subject of the present article. But the year there given for the younger Dale's birth, 1729, is a palpable error for 1745, or thereabouts, a date that would be more consistent with Dale's admission into the University of Edinburgh in 1770, and his receipt of the M.D. degree in 1775.

The elder Dale seems to have died near the end of 1750. In the *Gazette* of January 7, 1751, appears an advertisement, by his widow and executrix, of the sale of all his personal estate "at his late dwelling house in *Church Street:* the sale to begin with his LIBRARY . . . and to continue every afternoon 'till all the said LIBRARY is sold, a catalogue of which may be seen." On another day were to be sold "the slaves, cattle and stock: among whom are several very valuable negroes; and the household goods" on still another. From these details we may surmise that Dr. Dale left a valuable estate. In his will was at least one private bequest. He directed "that his collection of dried plants and other specimens of natural history be packed up and sent to his friend, Dr. John Frederick Gronovius at Leyden." (Salley, op. cit.)

Surely this was a many-sided individual! The practicing physician, the lawmaker, the judge and embryonic Chief Justice, the member of civic boards, the husband of three wives within a decade, all of them belonging to the first circles of the conservative Charleston society, the owner of an apparently large private library, the naturalist and friend of Gronovius, the contributor of poetry to the *Gentleman's Magazine*—here is distinction enough for an eighteenth-century American gentleman.

ROBERT ADGER LAW.

Correspondence.

CONCERNING THOSE "NAGGING REMONSTRANCES."

TO THE EDITOR OF THE NATION:

SIR: I have read with a great deal of interest the letter by Mr. McCormick in your issue of December 2, entitled "Nagging Remonstrances." Since Mr. McCormick lives in a suffering nation, and feels, perhaps, with great anguish of soul the awfulness of this bloody conflict, I am not surprised that he should write as he does. Perhaps he voices the sentiments of the greater portion of the English people. But to us Americans, a good many of his assertions and contentions seem very much overdrawn. Mr. McCormick does not deny that England has resorted to illegal methods to enforce her control of the seas; he does not deny that his country has long ago thrown aside the Declaration of London as a scrap of paper, and has refused to abide by various stipulations of the Hague Convention. He does not deny that England has resorted to illegal means to cripple our foreign trade. He does not deny the essential truth of President Wilson's "nagging remonstrances." What is his justification? Forsooth, the United States, by a blockade of doubtful legality at the time of the Civil War, prevented the Confederate States from exporting their cotton to England.

While we recognize the value of precedent, the parallel cited by Mr. McCormick does not seem to us very applicable. The right of a sovereign state to control its commerce is an inalienable right. The blockade of the Confederacy was aimed at insurrection within our own borders. We never admitted that the Government of the Confederate States was a legal Government, nor was it recognized as such by Great Britain. We held that the rebellious States were legally and rightfully a part of the Union. If Ulster were in rebellion, no American would have cause to complain if by drastic measures aimed at the pacification of her rebellious subjects England should forbid them to export to us their usual quota of pure Irish linen. But as to the Central Powers, the case is different. They are well-recognized Governments, and England, we contend, has no legal right to cripple our non-contraband trade with them, or to revise the laws of the seas for her special accommodation. But, aside from the fact that Mr. McCormick's precedent will not hold, it remains true that two wrongs do not make a right. Even if we had used illegal methods in dealing with the Confederate States, that would be no justification for England's use of them to-day. Mr. McCormick would hardly try to justify a wrong done by himself by citing one done by me.

Mr. McCormick reminds us that we have remonstrated against England's illegal interference with our trade, in spite of the fact that England is condescending enough to buy immense quantities of ammunition from our manufacturers. *O tempora! O mores!* There was a time when we enjoyed only such privileges at sea as England was kind enough to grant us. But we have refused to acknowledge such suzerainty for a little over a century. We had been laboring under the pleasing delusion that the seas were free. Even yet we Americans are provincial enough to believe the seas *ought* to be free, and we are not yet ready to compromise what we believe to be our rights, and humanity's rights, because our manufacturers of munitions are just now enjoying a mess of pottage.

Mr. McCormick is literally right in his inference, so sneeringly stated, that President Wilson has been contending for something infinitely higher than a mere matter of trade. It was not so much because a few American lives were lost on the Lusitania that President Wilson raised his protesting voice, but because the eternal rights of our country and of humanity had been outraged. As the head of the greatest of neutral nations, President Wilson is keenly aware that he is bearing a solemn responsibility and has a high duty to perform. As he said in one of his recent speeches: "We are not trying to keep out of trouble. We are trying to preserve the foundations upon which peace can be rebuilt. Peace can be rebuilt only upon the ancient and accepted principles of international law, only upon those things which remind nations of their duties to each other, and, deeper than that, of their duties to mankind and to humanity. America has a great cause, which is not confined to the American continent. It is the cause of humanity itself." I am not a Democrat myself, but I should be the last man in America to accuse President Wilson of catering to the pro-German vote. President Wilson has striven to do his duty as he sees it.

Mr. McCormick upbraids us for hypocrisy because we did not protest when the neutrality of Belgium was violated. Have we not protested? Not formally, of course, but there is scarcely a man among us whose soul has not been stirred to anguish at this outrage. It has made more pro-Ally sympathizers in this country, perhaps, than all other causes combined. The Germans know this. It may be that we should have given them official notice of our indignation. But what good would a mere formal notice have done? We are well aware, in spite of all her altruistic pretensions, that England never entered this war primarily on account of her love for poor, stricken Belgium. That played some part, but we know, and England knows, that her main purpose was to conserve her place in the sun. It is all very well for England, now that she is in this war, to maintain that she is championing the cause of human rights, international law, etc. But this furnishes little reason why she herself should violate those very rights which she pretends to champion. Mr. McCormick evidently believes that if we Americans reprobate the rape of Belgium, the place for us is in the trenches in Flanders. This would no doubt be pleasant for the English aristocrat who prefers the luxury of London life. Maybe then England will be willing to concede to us certain rights on the high seas! But we are not disposed to do any fighting in Flanders while England prates of German illegalities and at the same time tries to usurp the control of the seas, and while she answers our protests with denial or silent contempt, or, perchance, reminds us that she is favoring some of our rich people with orders for munitions in unprecedented quantities. C. L. SNIDER.

Chapel Hill, N. C., December 2.

[The possession by the Confederacy of belligerent rights was granted almost from the outset of the war; indeed, it was implied in the very proclamation of the blockade. So far as the rules of the war are concerned, including those relating to blockade, the status of the Confederacy was the same as that of any belligerent nation; nor did the United States Government pretend to base any of its claims in regard to the blockade upon "the right of a sovereign state to control its commerce."

As for our correspondent's sneer at the "English aristocrat," we think it only right to point out that it is rendered futile by the facts.—ED. THE NATION.]

AMERICAN AMBULANCE CORPS.

TO THE EDITOR OF THE NATION:

SIR: I read with interest and pleasure the tribute paid by your discriminating London correspondent, Mr. James F. Muirhead, to the American Volunteer Ambulance Corps and Mr. Richard Norton. In the hospital service in northern France, one hears often of this corps, and nothing but what is good.

May I say, however, that Mr. Muirhead is mistaken in saying that the American Volunteer Ambulance Corps is the only American organization that has succeeded in reaching the front? The fact is that fleets of ambulances from the American Ambulance at Neuilly have not only reached the front, but, like those of the Volunteer Corps, have remained there for long periods of active service. Thus the Dunkirk section of the American Ambulance was for a busy month stationed at Elverdinghe (to name one station out of many)—which is perhaps as near the front as ambulances have a right to be; and these cars, too, served a field ambulance which was constantly under fire, and they, too, ran down to the *postes de secours* by the trenches every night.

I should dislike very much to seem to detract in the smallest degree from the deserved honors of the Volunteer Ambulance Corps. But I feel that the men and women whose generosity supports the American Ambulance are entitled to know that their cars, too, are doing their duty.

HENRY SYDNOR HARRISON.

Charleston, W. Va., December 20.

CHILDREN'S BOOKS.

TO THE EDITOR OF THE NATION:

SIR: I read with interest, profit, and entire approval Mr. More's article on "Children's Books." As a teacher of rhetoric, and as a student of self-expression and literature, I found myself applauding all of Mr. More's commendations and condemnations. The common-sense and sound principles in every line are refreshing in this day of demand that the child receive only the life and speech that will be real to him because they are so familiar. As pointed out by Mr. More, have we not in our enthusiasm for this kind of realism become fictitious? And have we not in this fiction reached something wholly unworthy and undesirable? In the light of such an achievement, Mr. More's statements are most significant. Our only disappointment comes when we discover that he has not given us more on the positive side of the question. The list of books for children is not so meagre, surely, as Mr. More has left it. We are anxious for more of such good doctrine from the same pen.

The matter of books for children presents many phases. There are the motives for reading fiction, which Bliss Perry has treated so admirably in his "Theory of Prose Fiction." With these motives we must reckon before the child is very old. There is also the matter of the vicarious existence and experiences offered in fiction. How much of morals and manners we acquire in this way we can never guess. For this reason, the satisfying and creating of desires, and the proper guidance of speech and actions, and formation of ideals, must not be overlooked in the selection of reading. Then there is that most important feature, the matter of choosing works that stimulate the imagination. Here we so often run afoul of the will of parents and the opinions of the prude. They confuse imagination and its products with untruthfulness, and accuse fiction of all the crimes that many just now are wont to lay at the door of the moving picture. They do this, not knowing that the imagination is a most valuable asset; that the imagination implies the ability to go outside the narrow sphere of one's own personal affairs and take on the conditions of others; that through the stimulation of the imagination by means of wide reading we become more critical of ourselves and more tolerant of others; and that the greatest thinkers of all ages have, when they found accurate knowledge inadequate for the solution of their problems, drawn upon the imagination for the accomplishment of those great things left for us by them. And finally, there are for consideration two other matters: that of the language of the author and of his characters, and that of the kind of characters and acts to be put before the reader. On one or two of these points I should like to say a word.

On the matter of the language of the characters, the actions of the characters, the motives for reading fiction, and the value of works of literature that stimulate the imagination, Mr. More, Professor Perry, and Mr. Santyana have left nothing to be said. So here I wish to attack the question of the characters and their acts, and to make further inquiries concerning suitable books for children.

There is in the make-up of most normal, active boys, for instance, the thirst for adventure. In some it may be only the suggested outlet for the surgings of a restless nature craving activity. In others it is likely to be a love for the adventurous, the dangerous, and the heroic, and a loathing for the monotony of perfect peace and security and the every-day round of usual events. Now, books of the Jesse James type do not incite the thirst for adventure. They only show the boy a method of satisfying the thirst. What we need, then, is direction and a proper kind of satisfaction. Books of the right kind will do one or all of three things for the boy. They will satisfy vicariously, and without harmful results, the boy's desire for adventure; will, to my notion, bring a satisfaction or an experience that will stay the deed rather than incite it. Next, these books will change the boy's ideals and temper his deeds and speech. And finally, they will provide most profitable employment and entertainment that will occupy the time that otherwise might be employed in pursuits almost criminal. Now, I agree that this reading must be carefully selected. So here arises the question as to the choice of books.

May I then here point out some books and their virtues? First, there are the simple adventures of fairy stories. Ambitions and far-fetched day dreams, it is true, they may foster. But who would deny the harmless pleasure, and even benefit, of these? And from fairy stories will come no harmful imitations, no suggested programme of bad deeds. A boy may indulge in all the day dreams he pleases; but he cannot rise to the imitation of supernatural beings. His acts are barred by the one word "if." Next would come stories of animals. Of these we have a goodly quantity. Here the youth is predisposed to nature study and the outdoor things in general. Following these, the most suitable would be history primers, Bible stories, etc. But soon the boy outgrows these, and we must turn to other things. Then do I think it is necessary to take up some of the old stand-bys—books that have "stuff and art enough to make them interesting to the adult." I point first to "Robinson Crusoe." I need not comment much or long on this perennial work. What accusations can be brought against the wholesomeness of the commendable and enviable plan of this castaway's life as he works out the problem of his own existence? The language of the author, as well as the language and deeds of the character in the book, is above reproach. The book belongs in that small group which one

never tires of reading. Next, let us turn to "Pilgrim's Progress." Here, if we conceal from the child the selfishness of the Pilgrim, who forsook wife and children to save his own skin a scorching, we have a story entirely commendable. In it are the romance and adventure of ordinary fiction, the realistic touch of actual experience, and the portrayal of real character in spite of the allegory of personification. And finally, I come to something nearer home and reality. I refer to Cooper's "Leather Stocking Tales." Here we have wholesome stories full of stirring action and description. The past of our country lives before our eyes. To the forest, the Indian, the prairie, the trapper, life is given. The story seizes and holds the imagination of the reader; if it does this, it is art. And behind it all is the author, strong, benevolent, sincere, and just. A most wholesome pleasure results from a contact with him, his characters, and his scenes. These stories satisfy and give the experience of adventure craved by the boy. But above this in importance is another result. What must be the effect on the boy who follows Natty Bumpo from his early life to his noble death? The question is not hard to answer. Here is a hero whose every action is tempered with justice and moderation; a man who loathes to take human life or to commit a single dishonorable act; a man who risks all that a woman's honor may not be violated; a man who scorns to betray, and who never hesitates to do his duty to his fellow men, no matter what the sacrifice may be. How can any boy help coming out of such reading satisfied, subdued, and bettered? No deeds of a wrong kind can result. The setting has passed. And I might add, almost parenthetically, that those who object to having love stories of the falsely sentimental kind come into the hands of children will find Cooper to their liking. The love affairs in his books are the tamest on record. To these books may be added many of the same sort.

Last, I must say that I cannot leave the subject without referring to such noble productions as Hale's "Man Without a Country." Words of comment belittle the noble sentiments, the gentle persuasion, the amiable style, and the poise and dignity of the author as revealed by this little story. Patriotism has no stronger guardian; its equal is to be found only in such tales as the Bible stories of David and Jonathan and Ruth and Naomi.

H. L. Sensemann.

Ann Arbor, Mich., December 6.

INTERCOLLEGIATE ATHLETICS

To the Editor of The Nation:

Sir: President Foster, of Reed College, in his article on "Intercollegiate Athletics" in the current number of the *Atlantic Monthly*, has brought to an issue a subject of vital importance to the American college. It is not a mere statement of opinion, it is an arraignment to the charges of which sooner or later the system of intercollegiate athletics must satisfactorily answer before it can fully justify its further right to exist as an element in American college life.

President Foster has spoken clearly and forcibly what many a college president has long felt, but not dared to express. The time has come when serious action should be considered. Athletics has long since outgrown the narrow confines of the college curriculum, and has become a power over which faculties no longer actually rule, but exercise simply a kind of control to a greater or less extent, as the case may be. That control which the faculty does manage to exercise is looked upon by the students, and I am sorry to say by a considerable body of alumni also, largely as an unjust interference with their rights.

When we consider the true meaning of an American college and the important place which athletics should have in its curriculum, we cannot help but regard the interference as being all on the other side. As President Foster has pointed out, intercollegiate athletics "jeopardizes the main function of athletics." It emphasizes the training of a few at the expense of the many; and this training is expended on the very ones who need it the least. This is a direct perversion of the part athletics should play in a college course. Every student should receive the benefit of the coach's training. Those shivering individuals on the side lines should be on the field instead of puffing away at their cigarettes. There should be as many teams as there are students to form them. The real business of college athletics is to further the physical development and maintain a normal state of health in *every* individual connected with the institution. Intramural games furnish real recreation, truly exciting, stimulating fun, but cause no such nerve-straining experiences as those which come from watching one's team defeat or lose to another college team. When for two or three days or even a week before and perhaps the same length of time after a "big game" students are good for very little so far as work in the classroom is concerned, truly such a form of athletics is receiving undue emphasis. Indeed, it is not only jeopardizing the main purpose of athletics, but also that of the college, as an institution of learning.

The argument that intercollegiate athletics is necessary as an advertising agency for the institution is not justified. The expense of this kind of advertising is out of all proportion to the returns. No business man would consider such unprofitable advertising for a moment.

Equally unsupportable is the argument that this highly specialized form of athletics is necessary in order to create and sustain that intangible thing called "college spirit," which might mean anything, from the action of a freshman in taking off his cap to a senior to the action of a sophomore in never refusing to bet on his own team no matter what the odds may be, or even to a drunken carousal after a "big game." Whatever it may be, the unity which is brought about by specialized athletics is not the kind of unity which best solidifies and promotes the true spirit of college life.

I do not wish to hold up intercollegiate athletics as some terrible evil which has nothing good in it. My contention is that intercollegiate athletics has grown to such an extent that it has raised college athletics to an importance altogether out of proportion to its value as an aid in college work. It is not the business of a college to train specialized athletes, although one would think so from the present status of affairs. As President Foster rightly puts it, we want *"athletics for education, not for business."* The business side of college athletics, and all the hypocrisy usually concomitant with it, is something which should be entirely foreign to the predominating atmosphere of any American college.

R. A. Sigsbee.

Princeton, N. J., November 11.

MADAME CAMMAERTS.

To the Editor of The Nation:

Sir: May I venture to suggest that Professor Firkins has scarcely done justice to Madame Cammaerts in his review of "Belgian Poems," printed in your issue of December 2? Surely her versions of her husband's work are not all equally happy, but possibly one may take exception to some of Professor Firkins's criticism. His cleverness seems to have got away with him. Exactness and rhythm have been immolated to each other, he says, and cites: "Ma lyre tinte d'une corde, mon vers cloche d'un pied," translated thus: "My harp is weak and faintly sings." Truly the rhythm of the original is not kept, but does the sense come off so badly? And did not Professor Firkins forget to glance at the original when he remarks: "She [Mme. C.] adds, with involuntary point, 'My verse is uninspired'"? The next line in the French reads: "Et je n'ai guère d'inspiration." For my part, I believe Du Bellay's advice was good when he counselled not to translate the poets, but since, in this year of enlightenment, translated they must be to get any hearing out of their own country, I submit that Madame Cammaerts deserves a warmer welcome than the *Nation* has extended to her.

THE MILKY WAY.

To the Editor of The Nation:

Sir: Apropos of Wycherley's quatrain,

> Your Beauty's Light is evident,
> Though where or how, we cannot say:
> Thus unseen stars i' th' Element
> United, make the Milky Way,

Professor Hart asks, in the *Nation* of November 4, "Would a poet of the early Stuarts, 1620-1650, have known that the Milky Way is composed of single stars and assumed that the knowledge was current with his readers?"

The opinion that the Milky Way is composed of single stars goes back to Democritus (see Pauly-Wissowa, under Γαλαξίας). Its first sponsor in modern Europe is, I believe, Albertus Magnus, who devotes to the Galaxy the whole second Tractate of the "Liber primus meteororum," reproving several erroneous theories and expounding his own at length. His definition is: "Nihil aliud autem est galaxia, nisi multæ stellæ parvæ quasi contiguæ in illo loco orbis."

From Albertus Magnus Dante derives his interesting discussion of the Galaxy in the "Convivio," II 15. And Dante like Wycherley finds a comparison:

"Wherefore, inasmuch as the Milky Way is an effect of those stars which we cannot see save in so far as we apprehend them by their effect, and metaphysics treats of the primal existences, which in like manner we may not apprehend save by their effects, it is manifest that the Starry Heaven hath great similitude to Metaphysics."

Literature

GEN. CHAMBERLAIN'S NARRATIVE OF THE POTOMAC.

The Passing of the Armies: An Account of the Final Campaign of the Army of the Potomac, Based upon Personal Reminiscences of the Fifth Army Corps. By Joshua Laurence Chamberlain, Brevet Major-General, U. S. Volunteers. With maps and portraits and a biographical note by George Haven Putnam. New York: G. P. Putnam's Sons. $2.50 net.

Gen. Chamberlain graduated at Bowdoin College in 1852, studied theology and church history in the Latin, German, Hebrew, Syriac, and Arabic languages at the Bangor Theological Seminary, and served as Supervisor of Schools in Brewer, Maine, his native town. In 1856 he was appointed instructor at Bowdoin in natural and revealed religion. For four years he was professor of rhetoric and oratory at the same college, and in 1861 was elected professor of modern languages. In August, 1862, he became lieutenant-colonel of the Twentieth Regiment of Maine Volunteers, and in May, 1863, received his commission as colonel. He received the Congressional medal of honor for conspicuous service in the defence of Little Round Top at Gettysburg; in the campaigns of 1864 and 1865 he commanded a brigade at Spottsylvania and Petersburg, and when Lee stacked arms at Appomattox Gen. Chamberlain was placed in command of the receiving troops, signalizing the event by an act of courtesy celebrated in the annals of the war.

He himself in his own narrative, Mr. Putnam, who contributes the biographical note, and the publishers in their advertisement all declare that he was promoted to the rank of general on the field of battle at Petersburg by Lieut.-Gen. Grant. It is interesting to turn from the narrative to the war records to follow the steps which led to Gen. Chamberlain's promotion. On the 17th and 18th of June, 1864, Gen. Grant was at City Point. Gen. Meade was in command of the Army of the Potomac in front of Petersburg. The telegraph wires were out of order on both days, interrupting communication between Grant and Meade. On the evening of June 19 Gen. Warren, commanding the Fifth Corps, reported to Meade that Col. Chamberlain was mortally wounded in the assaults of the previous day, the ball having passed through the pelvis and bladder. Warren adds that Chamberlain had been previously recommended for promotion, that on the day before he had led his brigade under a most destructive fire, and that the wounded officer now expressed the wish that he might receive the recognition of his service by promotion before he died, for the gratification of his family and friends. Warren begs that the request be granted, if possible. On the same day Meade forwarded this telegram to Grant, with the earnest recommendation that Col. Chamberlain's request be granted. On June 20, the second day after Chamberlain's wounding, Grant at City Point, in pursuance of authority of the Secretary of War, in special orders No. 39, mostly devoted to the distribution of the army mail, appointed Col. Chamberlain brigadier-general of United States Volunteers, subject to the approval of the President. Mr. Putnam's suggestion that possibly Chamberlain's promotion "by Gen. Grant on the field of battle" was the only instance of the kind during the war recalls a number of promotions under similar circumstances.

After the war Gen. Chamberlain was Governor of Maine, and in 1876 he became president of Bowdoin College. He died in 1914. Ability, training, and experience made him a thoughtful participant in the campaign of 1865, which is the theme of his narrative. Its chief historical and military value lies in its exposition of the extraordinary and erratic handling of the armies confronting Lee, and of their strange composition. Long ago other writers, among them Gen. Humphreys and Col. Carswell McClellan, presented evidence which, in a way more readily understood by the general reader, the present volume confirms.

Here are some of Gen. Chamberlain's comments on the tactics indulged in:

> We could not understand why the Army of the Potomac was so broken up and buffeted about. . . . We were not readily reconciled to measures which contradicted commonsense, and, as we thought, military economics. . . . Why was the Army of the James marched a long, hard jaunt from the right of the Petersburg lines, and put in between the Sixth and Second Corps of the Army of the Potomac? . . . Why was the Fifth Corps, in the midst of a success on Lee's right, suddenly withdrawn, all its advantages abandoned, and sent to support Sheridan's cavalry, which was not at any strategic front, instead of having the cavalry support the infantry as the main object of the campaign required? Why did Grant leave the front of Meade, where the principal negotiations with Lee had begun, and make the journey to Sheridan's front, where Ord, of the Army of the James, was in chief command, and there arrange for the surrender?

These and other pertinent queries were answered long ago by Col. Carswell McClellan, of Humphreys's staff, in his book, "Grant vs. The Record," and by other careful students of the history of the Civil War. They are answered now again in Chamberlain's narrative, sometimes by suggestion, often by direct statement. The answer belongs more to the domain of psychology than to that of military science. Of Gen. Grant's Memoirs Chamberlain says that more than once military movements in this campaign could not be recognized from Grant's description of them. There was a double motive at play. One was the capture of the remnants of Lee's broken army. The other was Sheridan's desire to gather in the laurels to himself, and Grant's desire to serve Sheridan. Of Sheridan, Gen. Chamberlain expressed the doubt whether he had the ability to command in a campaign or great battle, a doubt which has grown with an increasing number of students of the Civil War, for all the impression made on persons immediately about him by his physical activity, and in spite of his, perhaps lessening, popular fame.

It is a curious fact that Chamberlain, though he discusses the Sheridan-Warren affair at length, and in the main justifies Warren, in common with all writers on the subject, with one exception, does not go back to the apparent starting point of Sheridan's hostility to Warren, which culminated in Warren's being relieved of the command of the Fifth Corps on the battlefield of Five Forks, after the battle had been won, and only a few days before Lee's surrender. On May 30, on the way from the North Anna to Cold Harbor, near Bethesda Church, Sheridan had been ordered to cover Warren's flank. From early morning until late in the day Warren sent repeated messages to Meade that Sheridan, instead of picketing the road on Warren's left, was on a road to the rear. He said that Sheridan had entirely failed to cover his left, and did not coöperate in any way. Late in the afternoon the Confederates were around Warren's left flank. Humphreys, Meade's chief of staff, had informed Warren that the orders to Sheridan called for picketing the roads as Warren desired. Sheridan's petulant replies to Humphreys's communication called forth from the able chief of staff a calm and clear statement of what the cavalry commander was expected to do. The latter contended that he had covered Warren's left all day, but the reports and positions of his subordinates plainly show that this was not the case. Here, apparently, was the beginning of Sheridan's hostility to Warren.

Before the spring of 1865 Sheridan had become an independent commander, subject only to Grant's orders, unless juxtaposition and priority of rank should place him under Meade or Ord. The erratic movements of the armies in the Appomattox campaign, as clearly followed and deservedly criticised by Gen. Chamberlain, are only to be accounted for by Grant's unfailing desire to serve Sheridan's personal interests. In the face of a strong foe such movements would have been fatal. Of Sheridan's movements, Chamberlain says the cavalry commander should have taken possession of Five Forks on March 29, 1865, when there was almost nothing to oppose him; that when ordered to secure that point on the morning of the 30th, he moved so slowly that he gave time for the Confederate cavalry not only to reach Five Forks, but to advance half-way to Dinwiddie Court House. With 13,000 cavalry, Sheridan had in his front only Fitz Hugh Lee's 1,800. And again by this timidity he was leaving the flank of Warren on his right exposed. In the meantime, while Sheridan was driven back far to the rear at Dinwiddie Court House, Warren had fought his way, with Lee on the spot personally directing the opposition, northward to the White Oak Road and near the right of the Confederate intrenchments. If Sheridan had

come up, it is possible the campaign would have ended then and there. But as Sheridan had not come up, Grant told Meade to hold Warren back, which recalls Grant's halting of Hooker's pursuit after Missionary Ridge and Lookout Mountain.

Chamberlain suggests that when Grant sent word to Sheridan that all the forces would now act as one army, and Sheridan had hurried to Grant at night, the lieutenant-general had promised to take care of the cavalryman's fortunes by placing under him an infantry corps of the Army of the Potomac. As it turned out, Warren had to turn back and go to Sheridan's aid. Sheridan was driven "pell-mell into Dinwiddie," to quote Chamberlain's words. The confusion, loss of time, crossing of orders, blunders of many kinds, Chamberlain attributes to the presence of too many army commanders and the erratic breaking up of the Army of the Potomac, the responsibility for which inevitably falls upon Gen. Grant, while Warren proved to be the unfortunate victim. In his official report Grant said that Sheridan, in his defeat by a much smaller force than his own, had displayed "great generalship." Chamberlain says that such a definition of generalship would let many a modest colonel into the temple of fame. He also says that, instead of what actually occurred, the best thing to have done would have been to follow Meade's suggestion and attack the Confederate rear towards Dinwiddie with the whole of the Fifth Corps.

Chamberlain's account of the battle of Five Forks, where, in spite of the success of the Union forces, the confusion of contending elements set in motion long before culminated, is a piece of masterly analysis. Previous to the battle there had been no proper reconnaissance. At the Warren inquiry, Sheridan's engineer officer testified that he did not know there was a "return" to the Confederate earthworks on the White Oak road. The direction of the Union forces was so faulty that they reached the road far to the east of the angle where the "return" was thrown back. Crawford, one of Warren's division commanders, of whose military ability Chamberlain had a poor opinion, influenced, perhaps, somewhat by differences between Chamberlain and Crawford's command at Gettysburg, marched far to the north in pursuit of a foe which lay to the west. Warren was busy correcting Crawford's false movement, and Sheridan, jumping at conclusions unwarranted, relieved Warren from command. But before the battle Griffen, who succeeded to the command of the Fifth Corps, hinted to Chamberlain that something would happen to Warren.

Gen. Chamberlain characterizes as "absurd" the account given in Grant's Memoirs of a visit paid by Grant and Sheridan to Meade at midnight of April 5, when Grant says he explained to Meade that he did not want to follow the enemy, but to get ahead of him, and that Meade's orders would allow him to escape. It is unbelievable, says Chamberlain, that an officer of Meade's position, experience, and responsibility could have listened patiently to such an imputation of ignorance and stupidity, and he adds that it is absurd to imagine that Meade ever intended to move to the right towards Petersburg. Furthermore, he points out, as other writers have done before, that Grant's orders placed the troops in the rear of Lee's army and kept them there until Appomattox Court House was reached. Of Meade's order on the 5th, Chamberlain says it is almost "the sublime utterance of a gentleman and a patriot—an unselfish and magnanimous man. To my mind, it seems like the last words of an Algernon Sidney or a Montrose." Readers of Sir Walter Scott's introduction to "The Legend of Montrose" will remember that the great Montrose had his Sheridan, to whom the people of Scotland gave their easily-won plaudits.

Told with spirit and skill, its pages full of human interest, lightened with personal sketches and pertinent anecdotes, Gen. Chamberlain's narrative is an important contribution to American history, one which can hardly fail to modify in some respects mistaken popular judgments. In the state of military preparedness, of which we are beginning to think, this volume may help to maintain a scientific application of military principles in the conduct of armies, for the prevention of the dangerous crudities manifested in the Appomattox campaign.

CURRENT FICTION.

The Fatal Garland. By Mrs. Ghosal (Srimati Svarna Kumari Devi). New York: The Macmillan Co.

This is hardly the Western world's idea of a novel. It is more like a "prose poem" on a legendary theme. The boy prince of Dinajpur, playing with the little maidens of his father's court, chooses the queenliest one and crowns her with a garland of flowers that her timider playmate has woven. When they grow up, the Rajkumar marries the gentler maiden, but Shakti, the chosen of his childhood, reappears, beautiful and imperious, to claim his love. Unlike the Hindu women of her class, Shakti walks abroad unafraid, for she has courage beyond other women, and she is not ashamed to plead the great love which serves her for modesty. So it happens that she is seen and desired by the young Mohammedan ruler of Bengal, the Rajkumar's overlord. While her lover hesitates between the happiness of his childlike wife and his deeper passion for Shakti, she despairs, and consenting to become the Sultan's wife, enters his household. After she has thus lost caste, the Rajkumar's scruples are reinforced by religious reasons, and Shakti has no alternative but to fulfil her promise. Years afterward the Hindu prince is imprisoned for sheltering an enemy of the Sultan, and the order is given for his execution. Shakti, as the Sultan's favorite wife, is able to contrive his escape by taking his place in the dungeon, and dies in his stead.

Those who look for a revelation of purely Asiatic thought will be somewhat disappointed. The woman whose nature transcends the conventions of her day and generation (a theme as new as feminism), the revolt of the individual heart against inexorable social laws (a theme as old as romance itself), the childhood episode out of which grows a tragic fate—all these are familiar in our own literature. What seems genuinely exotic is the dainty lyricism of certain descriptive passages, and the superlative delicacy and reticence of the style. Whatever has been vigorously conceived is quaintly subdued by this mode of expression, like some wild tale of tragic passion grown decorous in tapestry.

Sunlight Patch. By Credo Harris. Boston: Small, Maynard & Co.

Some day, we trust, the tragedy of our Southern mountains will be written worthily. It waits to be done; but meanwhile the purveyors of farce and the cheerful betterment writers have marked the region for their own. How often in their pages have we encountered an assemblage like this: The mountain lad avid for book-larnin', the erstwhile mountain-girl now teaching country school, the boyish civil engineer from the North, the old-fashioned Kentucky colonel and his old-time darky servant. Though surely never before was the mint julep so heavily relied upon as a source of mirth, never before was the spiritual regeneration of so many characters carried to so high a degree in one brief volume. As for incorrigibles, they are either killed off or banished from the neighborhood. No one on whom the rays emanating from Sunlight Patch have shone in vain, is permitted to remain till the end of the book. We incline to share the author's respect for Sunlight Patch, if not as a source of irresistible ethical influence, still as his one inspired conception. It is there that the mountain boy's blind sister lives, and there the mountain folk come from twenty miles around to hear her read out of the "blind" books she has brought back from the settlement school, "just like they were coming to a singin', till the clarin'd be plumb full." The suggested scene mirrors truly so much that is hopeful and so much that is distressing in the life of these people to-day.

The Valley Road. By Mary Hallock Foote. Boston: Houghton Mifflin Co.

In her preface Mrs. Foote disclaims the expectation of reaching other readers than "the old friends who read her books when she and they were young," and apologizes for her "belated" story on the ground that it was written before the present war began. "It has seemed strange enough to be going on with mere mechanical revision—seated, as it were, with one's knitting at the spectacle of the world's agony since August of last year." The sentence expresses what has been the mood of how many sensitive spirits? Yet the knitting must go on—perhaps, indeed, it is sane and quiet labor which the world in its agony most

needs. Mrs. Foote's work has always been refreshing for its clearness of mental and moral atmosphere. Now, when our younger story-tellers are so generally fumbling with the latest sex-and-humanity materials, the properties and bits of business exacted by newest fashion, a tale like "The Valley Road" is a rock in the desert. Its wholesomeness, its quietude, its literary flavor, are refreshing.

There is no marked novelty of plot or setting. The chief scene is a California property which has been bought by an Eastern syndicate after being ruined for mining purposes by legislation in favor of neighboring farmers. An Eastern engineer, Scarth, has been sent out to make what he can of it. But it is a difficult problem, and Scarth, after many years' effort, leaves it unsolved. His son takes it up, but to him also it proves a poser. Tom, however, as well as his sister, Engracia, is to find a happier career, and this story shows them making their way in that direction. It is graciously told. Mrs. Foote possessed herself of the thing called style at a time when it was rather highly valued. That was before the highest ambition of the "literary aspirant" (as the phrase went) was to "put across" his product by means of visible and audible "punch." If this story is in any serious sense "belated," it is so in its delicate force, its breeding, its uniabored care for the right word —qualities not without honor even in the barbaric America of a generation ago.

The Carnival of Florence. By Marjorie Bowen. New York: E. P. Dutton & Co.

To readers who have read with complaisance "The Viper of Milan" and other swashbuckling romances by this writer, the present volume may be recommended as worthy of its predecessors. Hectic history plus heart interest can achieve no more. The leading historical figure is Savonarola, not the Savonarola of "Romola," but a wild, rapacious fanatic, always on the verge of hysteria. Next comes the Magnifico, Piero dei Medici, out of whom this writer builds an absurd puppet of lust and feebleness. The heroine is Aprilis, daughter of a Florentine money-lender, who has many narrow escapes from the seductions of Piero, and lives happy ever after with her patrician husband. As for style, the book is of the sort in which a person may die of "a mysterious disease which was feared might be the plague," and in which a Savonarola can exclaim: "I am he, O most Christian King, who didst foretell that thou wert appointed," etc.

The Measure of a Man. By Amelia E. Barr. New York: D. Appleton & Co.

This is a far better story than its immediate predecessor, "The Winning of Lucia"—perhaps because it is more frankly and happily a tract. It was written, says its venerable author, "to honor and magnify the sweetness and dignity of the condition of Motherhood, and of those womanly virtues and graces which make the Home the cornerstone of the Nation." It is in general a plea for the old-fashioned woman, and in particular an attack upon the growing numbers of married women who deliberately avoid or prevent the bearing of children. As before, Mrs. Barr, though she has lived in America for more than half a century, takes for her scene the England of her girlhood. The place is Yorkshire, the time the sixties. The chief persons belong to those types which have grown so familiar to American readers of British fiction. The strong young man of property, the weak young man of genius, the foolish lord, the proud and worldly maiden, the dowager, and so on; all hail to them once more! The maiden is the real centre of the action—how she becomes the wife of the strong young man, how she avoids motherhood, how she is punished, and at last becomes the delighted mother of seven—this is the substance of the story. We do not see where the title comes in. "The Making of a Mother" might have really fitted.

MEDIÆVAL SPANISH ALLEGORY.

Harvard Studies in Comparative Literature. Vol. IV: Mediæval Spanish Allegory. By Chandler Rathfon Post. Cambridge: Harvard University Press. $2.50 net.

When Mrs. Malaprop referred to "an allegory on the banks of the Nile," her ideas of what constituted an allegory were only a little more confused than those of most writers who attempt to deal with the subject to-day. It is gratifying, then, to feel that this baffling literary type, at least in a portion of its history, has at last received competent treatment. Hard as it may be for us, in the midst of these stirring times, to turn our minds back to a subject which seems as remote as "Mediæval Spanish Allegory," we must needs give to this book of Professor Post's the importance that attaches to a pioneer in a new field. For in spite of the impulse lent in late years by Brunetière and others to the study of the "évolution des genres," this is really the first book to trace in any country the evolution of that peculiar form of literature which Lowell used laughingly to refer to as "allegory or worse."

Besides giving us for the first time a survey of the special field of Spanish allegory, this new book succeeds also in quite revolutionizing our ideas of the relation of Spanish literature in general to French and to Italian. Hitherto, scholars have almost invariably spoken of Spanish literature down to the time of "Don Quixote" as chiefly under the influence of Italy. Wherever they found allegory, for example, they would exclaim at once, "imitation of Dante." But now comes Professor Post to show that this allegorical strain was due not so much to Italian influence as to the vast reservoir of French allegory which was the common source for the allegory of Italy and Spain alike. If Italian imitation there is in Spain, it comes rather from the later Renaissance as a subsidiary influence. This is shown not merely in the case of allegory, but also in other forms of literature, and even in architecture, sculpture, and painting. So that this latest contribution to the Harvard Studies in Comparative Literature becomes of importance to all who are interested in the larger aspects of the comparative study of the three chief Romance literatures.

In the section of his book entitled The Evolution of Mediæval Spanish Allegory, Professor Post attempts the very difficult task of tracing the gradual growth of allegory in Spain through a period covering some twelve centuries. He declares "the tendency to allegorize is as deep-rooted in the Iberian peninsula as in any other district of Europe." The earliest attempts at Christian allegory are to be found in that mystical poet of the fourth century, Prudentius, the Spanish contemporary of Saint Augustine. Throughout the Middle Ages, we see in the Spanish peninsula, as well as in the rest of Europe, examples of those curious visions of the other world. Thus in the seventh century the Spaniard Paulus Emeritanus gives an account of the vision of a young acolyte who is borne up to the garden of paradise. Among other such visions, Saint Valerius relates one of a monk who images himself plunged into the cavern of hell, dropping from ledge to ledge towards the centre where Satan sits enchained.

In the thirteenth century the tradition is followed by the earliest of Spanish writers in the vernacular, Berceo. In his "Vida de Santa Oria," for example, he tells us how the maiden Oria was borne up in a vision to heaven, where she saw a throne prepared for her. Such journeys to the other world suggest Dante, but as Berceo died at the very time of Dante's birth, his visions, as well as the mediæval Latin ones, are an indication that no influence of the "Divine Comedy" from Italy is necessary to account for such visions on Spanish soil.

By the fourteenth century, various allegorical personifications have gradually grown up within the setting of these visions. In his journey to Hell and to Heaven, the visionary sees, on the one hand, the Seven Deadly Sins, and, on the other hand, the Seven Virtues—which those who are not fond of this sort of allegory may be tempted to entitle similarly the Seven *Deadly* Virtues. In another vision, it is the figures of the Seven Liberal Arts that appear. Elsewhere it is Love that is personified, as in the famous "Libro de Buen Amor" of Juan Ruiz, that extraordinary Archpriest of Hita, who in some of the satirical touches of his allegory shows himself a Spanish counterpart of Chaucer. Thus within the framework of the mediæval visions that were at first exclusively religious, secular allegory gradually found its way. Curiously enough, Professor Post speaks as though allegory had only later assumed the vision form. He says (p. 7): "As by constant manipulation allegorical composition acquired greater artistic excellence, the custom became more general of adorning it with a visionary

framework." As a matter of fact, just the opposite seems to have been the case. It was within the visionary framework that these allegories grew up, and it was only later, when the setting which had been essential to the earlier vision was no longer needed, that the device of the vision was discarded. In the light of his own evidence Professor Post's statements on this particular stage of the evolution of allegory seem to need some modification.

In the fifteenth century, with the writers of the court of Juan II, we reach the heyday of Spanish allegory. It is in the allegories of this period that previous critics have emphasized, perhaps over-emphasized, the Italian influence. Imperial was the son of an Italian, and in him and in the more illustrious Marquis of Santillana, they have pointed to many "Dantesque imitations." Professor Post, in his desire to minimize the pretended Italian influence, argues that these are not imitations of Dante, but rather of Dante's precursors in Spain, such as Berceo. But this seems hardly probable. No less an authority than Fitzmaurice-Kelly, in his "History of Spanish Literature" (p. 53), has said: "The chances are that Berceo and his writings had passed out of remembrance within two hundred years of his death, and he was evidently unknown to Santillana in the fifteenth century." Now, Dante, on the other hand, seems to have been well known both to Santillana and to the other later writers of visions. Indeed, in three of the visions—the "Decir de las Siete Virtudes" of Imperial, the "Triunfo del Marquez" of Diego de Burgos, and the Panegyric on the death of Alonso Carillo by Diego Guillen de Avila—it is Dante himself who plays the rôle of the guide that Virgil had played in the Divine Comedy. Dante has evidently been a guide to them in more senses than one, and it can hardly be denied that these Spanish writers of the fifteenth century show at least as much familiarity with the "Divine Comedy" as they do with the mediæval visions in their own earlier literature. When Professor Post, after insisting that the native Spanish tradition is sufficient in itself, brings forward the apparently contradictory thesis that it is the French rather than the Italian influence which is most important, it becomes clear that he is trying to prove too much.

From the rich variety of Spanish allegories of the fifteenth century there are two types that seem to stand out as peculiarly characteristic both of the period and of Spain, and that demand particular attention here. One of these, which describes the coronation of some famous man by allegorical figures, is usually designated by the Spanish title "Coronación." The other, which describes the sufferings of famous lovers in a sort of allegorical hell, we may refer to as the "Infierno de los Enamorados." Both these types, characteristic as they are of the early Renaissance, still show traces of the mediæval visions of Heaven and Hell from which they developed. For in the "Coronación" the author imagines himself as borne up in a vision to Heaven, where he beholds the rewards of fame; while in the "Infierno de los Enamorados," on the contrary, he imagines himself as conducted to Hell, where he beholds the tortures of love.

The "Coronación," according to Professor Post, may have been suggested by mediæval Spanish poems on the Coronation of the Virgin, or by visions in which saints receive crowns. Santillana himself had written a poem in which he imagined himself in a vision lifted to Heaven and beholding there amid the nine orders of angels the canonization of a Dominican and a Franciscan saint. As Santillana developed this theme, however, it is not the glorification of a saint that he sees in his vision, but that of a poet. In his "Coronación de mossen Jordí," for example, he describes the famous Catalan poet, Jordí de Sant Jordí, as crowned by the goddess Venus at the request of the shades of Homer, Virgil, and Lucan. In another poem, Santillana in a vision finds his illustrious precursor, the poet Villena, mourned by the nine muses on the top of Parnassus. When we compare such Coronacións with the earlier religious visions from which they sprang we cannot help being struck by the transition from the Middle Ages to the Renaissance that has already taken place. Instead of the Christian machinery of Hell, Purgatory, and Heaven, we find the appearance of pagan mythology. The canonization of a saint has given place to the coronation of the poet. The nine orders of angels have yielded to the nine muses. Paradise has been replaced by Parnassus.

When Santillana lavished in this way praises upon the poets who had died before him, one cannot help feeling that he may not have been without the hope that some similar tribute might be paid to him. If so, he was not destined to be disappointed; for after his death no less than three Coronacións were written in his honor—one by his nephew, Gomez Manrique; one by his secretary, Diego de Burgos, and one by Juan de Mena, "the great Cordoban poet," as Cervantes calls him, whose panegyric on Santillana is perhaps the highest achievement of this type of allegory.

The glorification of the poet is a characteristic of the end of the Middle Ages throughout Europe. The coronation of the successful poet at the "Puys" in France, the coronation of Petrarch with laurel on the Capitol at Rome, are but counterparts of the Spanish allegory of crowning the poet. The same desire of the poet for fame which is illustrated in Italy by Petrarch's "Triumph of Fame" and in England by Chaucer's "House of Fame" was in Spain represented by the "Coronación."

The "Infierno de los Enamorados," or, as Professor Post seems to prefer to call it, the "Erotic Hell," was the second type of allegory that particularly flourished in fifteenth-century Spain. As with the "Coronación," here again it is the illustrious Marquis de Santillana who has established this new type of allegory. In his "Infierno de los Enamorados" Santillana imagines in his vision that he is rescued from a wild beast by Hippolytus and led through a dark valley to a gloomy castle where he sees the tortures of unhappy lovers.

Just as the "Coronación" celebrated the famous poets, so this second form gave occasion to celebrate the famous lovers. The germ of both ideas may be found already in Dante, in the first two circles of his "Inferno." For in Limbo he encounters the illustrious poets in a meadow of fresh verdure, and in the second circle the celebrated lovers, including Francesca and Paolo, blown about by the gusts of the "bufera infernale." But scenes which had been in Dante but passing episodes in the whole tremendous scheme of punishment were developed by Petrarch and Boccaccio into elaborate compositions in themselves. As Petrarch's "Triumph of Fame" offers an analogy to the "Coronación," so his "Triumph of Love," where the lovers are cast into prison, furnishes an analogy to the "Infierno de los Enamorados." Similar counterparts of the two types might be found in Boccaccio's "Amorosa Visione" and in his "Corbaccio" or "Laberinto d'Amore."

In Spain, the peculiar forms that these two types of allegory took—the glorification of the poet and the glorification of the lover—gave expression to that passion for glory and that pride which characterized the Spanish Hidalgo in the days before Cervantes had "smiled Spain's chivalry away." There was never a time that the Spaniard had more reason for this pride than in the fifteenth century. Towards the end of that century the same memorable year that saw the united Spaniards bring their seven-hundred-year struggle against the Moor to an end with the conquest of Granada saw also the beginnings of Spain's long glories across the sea with the conquest of the new world by Columbus. In that same year, too, a Spaniard became Pope, and it was not many years later that another Spaniard was to become Emperor. It was in such proud days as these, when Spanish galleons were first beginning to bring back gold out of a western empire upon which the sun never set, that Spanish allegory, with its passions for personal fame, flourished in all its richness.

To-day, when the last vestiges of that western empire have been torn away from Spain, it is interesting to turn back once more to her former glory as it is reflected in the literature which Professor Post's new book has revealed to us. In spite of some serious defects in arrangement and some hasty conclusions, it gives us the best survey we have of the evolution of Spanish allegory, and at the same time a brilliant study of the relations of that literature to French and Italian. It should be a matter of no small pride to America that Americans have done so much for the study of Spanish literature. The first satisfactory History of Spanish Literature was that given by George Ticknor, which, unlike any other literary history, still holds its place today, some sixty-six years after it was written. If, in the excitement of the Spanish

War, some of us may for the moment have lost sight of the greatness of the earlier Spanish culture, it is some recompense to see since then the growth in America of the Hispanic Museum and the production of such scholarly works as Professor Rennert's "Life of Lope de Vega," and now this volume on "Mediæval Spanish Allegory" by Professor Post.

AN IMPRESSIONIST IN BELGIUM.

The Spell of Belgium. By Isabel Anderson. Boston: Tho Page Co. $2.50 net.

Following the volume on "The Spell of Flanders" is this companion in the series, on Belgium—chiefly as seen from a motor-car. The wife of our American Minister, Hon. Larz Anderson, had been in Belgium but a few months of 1911-12, when her husband's appointment as Ambassador to Japan compelled both to leave the country for the Far East. Her present work is in succession to that from her pen on "The Spell of Japan." So far as they present her experiences and impressions in Belgium, her chapters are chiefly reminiscent of her life in Brussels, with motor-car visits to various places both in the Walloon highlands and on the Flemish plain. One may look in vain for evidences of any close acquaintance with the life of the Belgian people, though her view is ever that of kindly sympathy. In an overcrowded country, even before the desolations of war, the struggle for life seemed to be keener than ever, but of the charm and spell which this land of art and legend, of Van Eyck and Rubens, cast upon her, there can be no doubt. It is with a sympathetic pen, and in fascinating literary style, that Mrs. Anderson writes, whether she depicts the glories or catalogues the woes of a nation—so often crushed, yet so often resurgent.

Since the previous volume in the series covered Flanders or northern Belgium, inhabited chiefly by the Flemish, of Teutonic origin, who speak rather an old form of Dutch, one would naturally expect, in this work, to find much about the southern or Walloon half of the country and its inhabitants, who are of Gallic strain and who speak French. Should not this be the main object of the author's thought and description? No one can really understand the Belgian people who does not clearly discriminate between the Walloons—at whose initiative nearly every one of the national movements has taken place—and the Flemings, who are the conservatives. The former furnish also a majority of the Socialists and the radical leaders, while the latter are, in the main, still unquestioning adherents of the Church and her traditions. Yet in this work we find very few discriminating references to the Walloons, or to the striking difference in the topography of the two sections, notwithstanding the fact that both ethnic and geographic conditions in Belgium have from the dawn of history conditioned and still influence the development of both country and people.

In the three opening chapters, devoted to legation and court life in Brussels the Magnificent, we have perhaps the best view yet afforded readers of English of the procedure of royalty at this rather democratic court. Then, hieing to days mediæval, the author gives us animated verbal pictures of the politics, industries, and civic life, the memories of which the Belgians cherish so tenaciously. Here democracy, based on industrialism and long antedating England's, first arose in northern Europe. Before its peaceful onslaught, feudalism gave way. From the first, Belgic civic life was strong. The oldest charter in Europe, given to the citizens of Grammont in 1068, which granted civic rights in an age of battle-axe law, ushered in the new day. After that a congeries of city republics grew up. From this root of charters and guaranteed rights of the people, despite all changes and conquests, Belgian liberty has ever drawn life and vigor. Even the so-called Protestant Reformation was largely the direct result of economic factors.

This development of municipal vigor bore fruit in America. Out of the Walloons' Land, or Southern Belgium, came the refugees from Spanish despotism, men, women, and children, the real settlers and initial home-makers, who first settled New York, New Jersey, Pennsylvania, and Delaware. Before the Revolution, all the first chartered cities, except Annapolis, Md., within the limits of the present United States, were of Netherlandish origin and mostly between Manhattan Island and the Delaware.

The historic spell does not seem to lie on the author, for neither the fact that our Middle region was Nova Belgica, nor that there are manifold points of contact between Belgic and American history, is noticed in her pages. Chapters on politics, industries, tapestries, paintings, and the modern literary situation delight us, but there is little evidence of her acquaintance with the people or the real social forces that explain the tenacity and repeated reassertion of Belgian nationality as against Spanish, Austrian, Dutch, or German oppressors. In place of these things, naturally expected after the book on Flanders had appeared, we have several chapters of legends. These are more or less interesting, though most of them are already well known. As regards the new version of the Antwerp legend, we feel as conservative towards the orthodox form as a nursery child who discerns a variation from the fairy tales as at first related. We confess to liking the old version of Brabo, the killer of the giant Antigonus, and the "hand werpen," or throwing, better than the less known one here reproduced, which, in spite of its alleged Flemish origin, has a very modern sound. The chapter on Politics and Plural Voting is very clear and very interesting, but from a somewhat closer acquaintance with the country and people, we think Mrs. Anderson underrates the power and influence of the Socialists. She ignores utterly the small numbers but potent influence of the Protestants, who from the heroic days of resistance to Spain have, despite clerical tyranny allied to state power, kept alive their organization. One-fifth of the book, comprising one long chapter entitled The Last Word, is taken up with first-hand narratives of the woes and desolation of the German invasion. With the author (p. 355) "we feel sure that the spell of its [Belgium's] enchantment will survive."

As regards holiday dress, indexing, copious illustration, and resplendence of outward appearance, the volume is worthy of a king's welcome.

SUB SPECIE WISCONSINÆ.

Regulation of Railroads and Public Utilities in Wisconsin. By Fred L. Holmes. New York: D. Appleton & Co. $2 net.

The "Wisconsin Idea" has been much exploited both by observers and by those who have been responsible for its creation and application. It has been glorified by its friends. From its critics there has been raillery of a not altogether gentle kind over the self-adulation indulged in by the participants in this movement of moral "uplift." Yet if we study the results in detail with minds freed from all prejudice, the claims which Wisconsin sets up for primacy in the movement for popular government are not altogether without basis. Nor is it so difficult for us to appreciate how those who are in the thick of the fight should forget for the moment the extent to which Wisconsin owes impetus to movements that have gone before, and should overlook the fact that other commonwealths have similar problems which they are solving in their own way independent of Wisconsin's assistance.

The most recent product of the "Wisconsin Idea" is this study of the history and work of the present Railroad Commission, created in 1905. It is written by one who was a member of the Legislature at the time of its creation and Chairman of the Assembly Committee on Transportation, and who has kept closely in touch with its work ever since.

It is an extraordinary story and one of fascinating interest, admirably told. It reveals a ready response on the part of the State to the suggestions of the Commission for amendment and extension of its powers, and continuous State support born of confidence in the ability and integrity of the Commissioners. It would be impossible within the limits of a review merely to mention the various activities which make up the wide range of the Commission's service, let alone passing judgment upon them. Only the most important of these activities from the standpoint of general State regulation may be noted.

A distinctive feature of the Wisconsin law is that the Commission fixes absolute and not merely maximum rates, and no rate goes into effect without the approval of the Com-

mission. To set aside the Commission's order requires that the railway or utility shall prove its unreasonableness, thus shifting the burden of proof to the corporation. If new evidence is presented before the court, the case is immediately sent back to the Commission for further hearing.

The Commission classifies the service of each utility, and makes a uniform rate for each class. It fixes standards of service, voltage of electricity, heating quality of gas, pressure of water on mains, facility with which telephone calls shall be answered, adequacy of equipment in street railway service, and its standards are enforced through constant inspection and supervision by the Commission's staff. It has devised elaborate systems of accounting for each of the utilities and has made definitive rulings covering the vexed problem of depreciation. No securities that run for more than a year can be issued without the Commission's approval.

The most distinctive features of Wisconsin's regulatory practice remain, however, to be noticed. The first is the cost basis of rate-making. In no other jurisdiction has the principle of basing rates on cost been carried so far or with such success. It has involved in Wisconsin physical valuation of railways and all other utilities and the elaboration of unit costs to a degree unknown elsewhere. The author's endorsement of this practice is emphatic and leads one to wonder whether the vigorous objections of railway and other utility accountants will eventually be overcome. It is not without significanee that B. H. Meyer, who is a graduate of this Wisconsin Commission, is responsible for introducing the first stages of cost accounting into the accounts of the Interstate Commerce Commission. A second distinctive feature of Wisconsin's practice is the indeterminate franchise now held by all public utilities. With the passage of the law, which made this innovation possible, the Commission took a definite stand in opposition to the creation of competitive utilities, with their duplication of facilities and consequent unnecessary burdens on the public. Instead it has created legally protected monopolies. It is of significance that municipally owned plants are under the same control as private, and that municipal accounting and management in general have improved greatly under the Commission's tutelage.

As already hinted, one feels inclined to criticise in some respects the attitude of mind of the author, while giving him full credit for an excellent statement of the facts. He fails, in the first place, to recognize the indebtedness of Wisconsin to movements in other States and on the part of the national Government, in which solutions for some of the same problems had been attempted prior to Wisconsin's entrance upon the scene. Note, for example, this statement (p. 317):

> The original Interstate Commerce law was greatly modified in intent, and many of its underlying principles either weakened or destroyed through decisions of the Federal courts. In Wisconsin there has been no judicial interpretation or construction of the provisions of the regulating act, which in any way had the effect of diminishing the primary purposes of the law. The difference in the spirit with which the State and Federal courts view economic conditions probably explains the divergent results. Gradually the Wisconsin Supreme Court has abandoned the customary practice of shackling twentieth-century progress with eighteenth-century ideals.

The true explanation is that the Interstate Commerce law, which was enacted nearly twenty years earlier, furnished the proving-ground for later statutes. As a matter of fact, we know that the Wisconsin law took advantage of the experience gained in the administration of the Interstate Commerce law and avoided many of its pitfalls.

Finally, one wishes. as one lays down the book, that one might feel as confident as does the author of the success of the Wisconsin method, not only from the standpoint of the State, but also from that of the corporations. But there is only a chance reference here and there to the views of a corporation manager, and one is left wholly in the dark as to what the corporations think of the Wisconsin Railroad Commission. They seem to have prospered, but whether in spite of the Commission or because of it we do not know. We are compelled to be satisfied with the oracular utterance of the State Supreme Court: "So far it has been found to accomplish the task with such distinguished completeness that the enactment stands as a most consummate effort of legislative wisdom and a model for similar efforts elsewhere."

"JOHN COMPANY."

The English Factories in India, 1651-1654: A Calendar of Documents in the India Office, Westminster. By William Foster. Oxford University Press.

The history of the "John Company," as the old East India corporation used to be called, has a perennial fascination for lovers of stern and dramatic adventure. Many volumes have been written tracing the evolution of the present Indian Empire from its somewhat sordid beginnings in the British factories and trading posts established three centuries ago on both sides of the Indian peninsula. The background of Mongol and Persian rivalry, the struggles between the Portuguese and the Dutch in the earlier years, and among the Dutch, French, and English later, the attempts of the Dutch to sweep British shipping from the Eastern seas, and of the French to drive British traders from the Mongol coast, together with the culminating events of the Seven Years' War and the Indian Mutiny, furnished all the ingredients of a rugged and picturesque narrative. From the Nawāb Mir Jumla to Dupleix, Clive, Nicholson, and Lawrence the reader found plenty of purple patches, periods of individual prowess, that served to raise the story high above the mere chronicle of business routine.

But with the march of historical scholarship it was inevitable that the prosier but no less important parts of the subject should demand a hearing. Behind the individuals lay the company, and the prosperity of the company lay in the success of its business transactions. In the India Office at Westminster are thousands of documents, formerly used chiefly for the compiling of biographies, that contain the secret of the growth of British control in India. Years ago, William Noël Sainsbury, then of the State Paper Office, began to calendar these documents, as part of the "Calendar of State Papers, Colonial," and carried the entries of the Court Minutes as far as 1634. But the task was too great, the work was dropped, and Mr. Sainsbury confined himself to the American end of colonial history. A few years later, Henry Stevens, "of Vermont," the well-known antiquary and bookseller of London, attracted by certain items in Mr. Sainsbury's calendar, obtained permission to print the full minutes of the company to 1603, and his volume was issued by his son in 1886. In 1893, Quaritch, for reasons unknown, published a single volume containing in full the first letter-book, a manuscript long supposed to be lost but recently discovered. The importance of Quaritch's venture lay not so much in the publication itself as in the fact that the bookseller entrusted the choice of material and the task of editorship to two men whose names are intimately connected with the revived interest in the records of the company.

These men were Sir Charles Birdwood, eminent member of the India Office and writer on the art, symbolism, and industry of the East, and still living at the ripe age of eighty-three, and William Foster, of the same office and later superintendent of its records. Sir Charles had already prepared a report on the records, the third edition of which was printed in 1890, and he now made a determined effort to have the whole matter of publication placed on a permanent foundation. The effort was successful. A "List of General Records, 1599-1879" was issued in 1902; the patronage of the Secretary of State for India in Council was enlisted; and a publisher was found, first, the firm of Messrs. Sampson, Low, Marston & Co., and afterwards the Delegates of the Clarendon Press. In 1896 the first fruits appeared. Quaritch's work was continued in a volume of letters, under the direction of Frederick Danvers, at that time superintendent of records, and in the years to 1902 five more volumes were issued, with William Foster as the editor, covering the period to 1617. The continuation of Sainsbury's calendar was entrusted to his daughter, Miss Ethel Sainsbury, who by 1913 had edited four noteworthy volumes, carrying the subject to 1654. At the same time, Mr. Foster resumed the calendaring of the letters or original correspondence, under a new title, "The English Factories in India," and the seventh volume

of that series, treating of the period 1651 to 1654, is now before us.

Thus the material for a definitive history of British control in India is gradually accumulating in printed form, and another demonstration is made, in striking contrast with the spirit prevailing in our own Government, of the interest taken by British officials in the publication of the documents in their custody. Of the character of the documents here printed we need say but little. Any analysis would involve a presentation of subjects that could not be briefly discussed. Altogether, the documents cover but half a century, and those of this volume but four years, and with two centuries more to run much time must elapse before the final record of the history of the company is available in print. Thus far the activities concern the management of the company at home and of the factories in India, the trading voyages to the East, and the interminable negotiations with the native princes in India, Persia, and China, in the effort, as yet often vain, to outwit the representatives of Portugal and Holland. Throughout all the negotiations there runs a vein of low business morality, and cheating the company seems to have been a favorite pursuit. So far as general history is concerned, the records are of great value for the light they throw on the commerce of the seventeenth century in the dyestuffs, cloths, spices, and gold of India.

Notes

The Century Company announces the forthcoming publication of "The Story of the Submarine," by Farnham Bishop, and "Master Skylark," a dramatization of John Bennett's novel of that name.

"The First Hundred Thousand," by Ian Hay, will be published next month by Houghton Mifflin Company.

In the swarm of books relating to the war it is refreshing to come upon a plain, simple narrative such as is the official Belgian report, "L'Action de l'Armée Belge" (Paris: Chapelot). Covering operations from July 31 to December 31, 1914, this short report is eloquent by its sobriety and self-restraint. It describes in sufficient detail the operations of the heroic Belgian troops from their first contact with the German invasion to the final junction with the Allied troops behind the line of the Yser. The ideas controlling these operations are clearly set forth: to hold as much of the national territory as possible, to establish lines of defence that would be useful should the Allies come up in time, and, nevertheless, to avoid exposing the army to certain destruction should they not come up. It is significant that, until Belgium realized that the Germans were about to violate her territory, she kept her small army (six divisions) stationed in strict accord with the conditions growing out of the treaty guaranteeing her neutrality. One division faced England, two France, one, and only one, Germany. The other two formed the garrisons of Brussels and of Antwerp, respectively. The publishers have mounted the maps of this report in a manner as commendable as it is novel, by causing them to fold in along the top of the usual blank page, instead of along the right edge. We earnestly hope that publishers of works containing maps will take note of this innovation, and imitate it wherever possible.

In "Some Aspects of the War" (T. Fisher Unwin) S. Pérez Triana gathers together some loosely connected thoughts and enunciates a number of tolerably obvious truths. The author, a citizen of the Republic of Colombia and a former member of the Permanent Court of Arbitration at The Hague, studied in his youth at the University of Leipzig. The war has stirred within him a bitter reaction against all things Teutonic. German disregard of international law, German atrocities, German songs of conquest and of hate, German militarism, and German ambitions—all these he castigates in unrestrained rhetoric, supported by quotations ranging from the Old Testament to his own communications to the daily press.

Henry St. George Tucker has little difficulty in establishing the existence of some "Limitations on the Treaty-Making Power, Under the Constitution of the United States" (Little, Brown; $5 net). He cites numerous authorities for the proposition that this power is subject to the implied restriction that nothing can be done under it which changes the Constitution of the country or robs a department of the Government or of any of the States of their constitutional authority. Even those who argue for the supremacy of treaties over State laws admit that there are matters which are not proper subjects of international agreement, and which, if embodied in a treaty, "would be only a colorable, not a real, exercise of the treaty-making power." Limitations of this sort are inferable from the language of the Constitution. Treaties, in order to become the supreme law of the land, must be made "under the authority of the United States." It is not the whim or caprice of the President and a concurring two-thirds of the Senators present that determines whether a particular topic is the proper subject of treaty agreement, but our Federal Constitution and frame of government. A treaty which violates them is not made "under the authority of the United States." Secretary Bayard recognized this doctrine when he declined to enter into a treaty with Brazil establishing the principle of reciprocity in the administration of aliens' estates by consuls. He declared that "the Federal Government has no power to impose such regulations on the States" (5 Moore's Dig. of Int. Law, 120). It is true that other Secretaries of State have not agreed with Mr. Bayard as to this particular limitation on the treaty-making power. Mr. Blaine once referred to it as a controverted point (For. Rel. of U. S., 1890, p. 255). And here we come upon the real difficulty which besets Mr. Tucker. What are the limitations upon the treaty-making power of the President and Senate? He insists that they are very extensive, prohibiting not only changes in the Federal Constitution, and interference with the power of the House of Representatives, but prohibiting the abrogation of State laws governing the tenure and transmission of property, the settlement of decedents' estates, as well as those enacted in the exercise of the police power. He admits that the Supreme Court has not expressly formulated this doctrine, but, on the other hand, he asserts it has never committed itself to the opposite view. In several recent cases, that court has been careful not to render a decision on this subject, while so construing treaties as to avoid a conflict between them and State laws. State courts of last resort in California, Minnesota, and New York have taken a similar attitude. They decline to pass upon the question whether a Federal treaty can supersede State laws for the administration of decedents' estates, and content themselves with holding that the particular treaty before them was not intended to produce that result. No one can read these decisions and the diplomatic history of the treaties involved without the feeling of assurance that the President and Senate have never made a treaty which was intended to assert their unqualified supremacy over State Constitutions and laws.

Marcus Dimsdale's "History of Latin Literature" (Appleton; $2 net) cannot be ranked with such members of the Literatures of the World series as Dowden's volume on French Literature or that of Gilbert Murray on the Ancient Greek. There are parts of the book which are very satisfactory, but in too many places the author betrays a lack of vital personal interest, and is content to serve to the reader the *panem secundum* from the critical store of some one else, with no fresh sauce of his own mixing. The result of this process may not always be a loss, but Pichon's condemnation *en bloc* of the character drawing in the last six books of the Æneid, for instance, rests on no such solid ground as to justify its quotation and acceptance without question. The chapter on Horace is based on a deeper personal appreciation, and avoids some of the common pitfalls, such as interpreting certain borrowings from Lucilius in the Satires as confessions of personal immorality, linking a large share of the Odes up to the conspiracy of Muræna, or failing to recognize the sincerity and predominance of the moral and patriotic sentiment in Horace during the years of his maturity. The long chapter on Cicero is too long by at least the two pages in which a half-hearted attempt is made to defend his poetry. Tacitus put the final and inimitable word on that subject into the mouth of one of the speakers in the Dialogue Concerning the Orators, where we are told that Cæsar and Brutus wrote poems, "not better than Cicero, but with better luck, because fewer knew that they had done so." And when Mr. Dimsdale in all seriousness winds up his defence by citing the fragments of Cicero's poems which remain as proof that he "attained at least a respectable mediocrity," one imagines either that his sense of humor is lacking or that his edition of Horace lacks the famous passage,

> mediocribus esse poetis
> Non homines, non Di, non concessere columnæ.

Such merits of substance as the book possesses are rather seriously injured by lack of proper care in getting it through the press. There are many little defects and errors so obvious that one wonders why they were not removed by the publishers, whether detected by the author in the proof-sheets or not. Or has the day gone by when we may legitimately assume that a publishing house should be too jealous of its own reputation to let slipshod work issue from its presses? Responsibility for incorrect references to texts and authorities, which are frequent, must, of course, fall back upon the author. Some of these can be explained only on the theory that the

author did not take the trouble to verify his references for himself when preparing his manuscript. On two successive pages about Terence we note one incorrect reference, two separate cases of confusion of characters, and two mangled quotations of the text, one of them very aptly followed by the words, "to translate would be absurd." Need it be argued that the cause of classical scholarship is not likely to be furthered by slovenliness in its literature?

Mrs. Charmian K. London tells from the woman's point of view, in "The Log of the Snark" (Macmillan; $2.50 net), the story of the interrupted round-the-world cruise which has already been described by her husband. She puts it into the form of a daily typewritten record of events and impressions, with thrills and headaches, sores, scares, and bruises, storm and calm, all in chronological order. Upon it all she endeavors to throw back the parting sunlight of "a sweet memory," with the possibility of doing it over again as "the one ultimate hope of earthly bliss," but her narrative is hardly likely to make "Snarking" among the South Sea Islands a popular pastime. It took some months of California climate and rest to work out of Jack London's system a half-dozen maladies which he had contracted during the voyage, and Mrs. London suffered from recurring attacks of fever for nearly a year. The risk to life and health involved in travelling with such limited facilities as those of the Snark is a high price to pay either for exceptional experience or for good "copy."

One thinks of the thoroughness of a von Hindenburg "drive" or enveloping movement as one follows the course of Clifton Johnson from the Pacific Coast over the Rocky Mountains, through the Mississippi valley, and along the Great Lakes, sees him throw out his right wing to sweep the South from Texas to the Carolinas, next to form an unbroken line from the St. Lawrence to Virginia, and now finally to lead his forces through the "Highways and Byways of New England," from the New York border to Maine. One can hardly say more of this new volume (Macmillan; $1.50 net) than that the author hunts out the typical and the picturesque along the country roads and picks up the "short and simple annals" of life on the farms and in the village hotels and groceries of New England, just as he has done for other regions in the half-dozen previous volumes of the series. The amount of genuine Yankee wit and humor which he has found shows that the foreign invasion of recent times has not altogether altered the New England type.

At the request of the Romance department of Smith College, M. Lucien Foulet—himself the author of an admirable treatise on the "Roman de Renard"—prepared recently a purchase-list of books and periodicals necessary for the constitution of a good Old French library. That list, edited by Professors Schinz and Underwood, is now published as "A Bibliography of Mediæval French Literature for College Libraries" (Yale University Press). It contains some two hundred entries, about half of which are starred as especially important. The current price of each work is indicated. The list includes complete sets of the general Romance periodicals, such as the *Romania* and the *Zeitschrift für romanische Philologie*. Without these, the cost of the whole collection would be, roughly, a thousand dollars, or half that amount for the starred works only. The Bibliography is carefully prepared and excellently printed, and will prove convenient to students of Old French, acquisitive or inquisitive.

The editors recognize that "such a selection will differ according to the scholar." Due allowance made for individual likings, however, this particular selection must still meet with adverse criticism on the ground that it slights work done outside of France. The list is designed for American use, yet it disregards almost entirely the by no means negligible contributions of American scholars. Mott's "System of Courtly Love" and Miss Schoepperle's monograph on the Tristan legend, to mention but one familiar and one recent book, should certainly have been included. The names of Rajna and Restori do not appear. A regrettable prejudice against German work is manifest. Inferior French editions of "Aiol," "Gautier d'Arras," and the "Roland" are listed, but not the far better German editions by Foerster ("Aiol" and "Gautier d'Arras") and Müller. Other neglected German works of primary importance are Baist's "Perceval," Golther's "Tristan," Schultz's "Höfisches Leben," and Voretzsch's "Einführung in das Studium der altfranzösischen Literatur." Minor defects are few. The analysis of the Grundriss is careless in its omission of the section on Italian literature. Crestien is spelled with an *h* that is neither modern nor mediæval.

It is interesting to note that the first book to attempt a comprehensive summary of the activities and organization of "American Chambers of Commerce" is an essay by Kenneth Sturges, M.A., to whom has been awarded the David Ames Wells prize in the department of political science of Williams College, the competition being limited to senior undergraduates and graduates of not over three years' standing (Moffat, Yard; $2 net). Mr. Sturges graduated in 1911, and was winner of the competition open to the classes of 1911, 1912, 1913, and 1914. His book is a compilation of such facts as he found available, and refers to many sources of information from which the student can obtain further details. It covers the period from 1768 to 1915 in the United States. Early historical development and distribution, structural principles, training and work of the commercial secretary, activities in connection with city governmental reform, coöperation with municipal authorities, civic improvement, industrial progress, etc., are treated in separate chapters. A particular study of the Cleveland Chamber is included, inasmuch as "The secretaries of thirty prominent commercial organizations in the United States recently voted to place the Cleveland Chamber in the front rank as the body that in their opinion had done most to improve its city and stimulate civic loyalty on the part of the citizens." The book includes notes, appendices, index, and a bibliography. It will be found useful as a reference book by libraries, schools, and all directly concerned with the civic, economic, or commercial aspects of the subject.

We are inclined to think that Professor Cook's method in "A Literary Middle English Reader" (Ginn; $2) is a more satisfactory way of recommending our earlier literature to a wider audience than the method of more or less complete modernization, recently much resorted to. Middle English poetry has generally not quite enough structure to bear up well under the strain of translation. The genuine flavor of both verse and prose easily evaporates in course of the change. The present plan provides a substantial and representative body of text, each selection preceded by a compact introduction, and all the words likely to impede the course of the least practiced reader glossed at the bottom of the page. Undoubtedly, Professor Cook has opened an inviting road for the searcher after literary values. The arrangement is roughly by types, under such rubrics as romances, tales, chronicles, lyrics, and plays. Juster impressions of the material might be more easily had if the arrangement within the type were more nearly chronological. "King Horn" would have made a better entrance to the field of romance than Malory's "Morte d'Arthur."

Few persons consider the extent to which belief in a not remote "second coming of Christ" now exists in the Christian world. Prof. Henry C. Sheldon's "Studies in Recent Adventism" (New York: The Abingdon Press; 50 cents) is a timely contribution to the understanding of this phenomenon. His statement of the recent literature of the subject is practically complete, and his refutation of Adventist arguments is decisive. The belief, considered merely as an opinion, might be passed over in silence; but its tendency to promote a false exegesis of the Bible and to lay stress on non-spiritual conceptions calls for the vigorous condemnation which is given in the present volume.

In "Is Death the End?" (Putnam; $1.50) John Haynes Holmes, minister of the Church of the Messiah, New York, offers considerations supporting the belief in immortality. Discarding arguments based on the alleged universality of the belief or on the experiences of the Society for Psychical Research, he relies on two generally acknowledged facts: First, the grand spiritual outfit of man, which seems to point to a destiny higher than that of this earth, and then, the principle of the persistence of force, which, he holds, secures the continuance of the great spiritual force that constitutes the soul. These considerations are put forcibly, but to some readers it will seem doubtful whether they demonstrate personal immortality. The Creator, it may be said, may choose to develop on earth a race of beings intellectually and morally highly endowed, but we do not know that He will choose to continue them in existence longer; and it does not follow that the persistence of force carries with it the continuance hereafter of any particular vehicle or instrument that the force may here use. The value of Mr. Holmes's attractively written book would be increased for many students by a more detailed consideration of the two difficulties just mentioned.

For the materials of a life of William Branch Giles, one of the most debated figures of his time, there have existed large stores of material. From his entrance into the House of Representatives in 1790, an obscure young Virginian from a rural district, to his retirement from the Senate in 1816, he never failed to take an active part in all matters coming before Congress. During Jefferson's Administration he was virtually party chief

in legislative matters, while as a member of the Committee on Foreign Relations he paid unremitting attention to international affairs. It is the merit of Prof. D. R. Anderson's "William Branch Giles: A Study in the History of Virginia and the Nation from 1790 to 1830" (Banta Publishing Co.; $1.50), that it has gathered together all these materials in the Annals of Congress, the writings of Adams, Jefferson, and Monroe, and the newspapers of Washington and Virginia, as well as in Giles's private correspondence, and that the author has cast new light upon the doubtful points in the character of a peculiar man. The heavy volume is largely a rather dry statement of Giles's attitude and utterances upon such questions as the national bank, the tariff, the embargo, States' rights, and the national judiciary; but there runs through it the purpose of vindicating Giles from the disparaging estimates left of him by opponents like Adams and Gallatin. In carrying out this purpose, the author sometimes fails to condemn Giles where condemnation is due. Beyond any doubt he was a man of ability and intellect, and historians have been unjust in denying his competence to write such papers as his resolutions against Hamilton. Beyond doubt he was a leader of independence and integrity, and deserves credit for standing upon principle even in his insurgency against Madison. But his prejudices and narrownesses are not the more defensible for having been honest and ardent. His early opposition to the far-sighted plans of Hamilton was only that of his party. But he appears in a less amiable light in his unyielding stand by States' rights, extending to unreasonable jealousy of Federalist measures; in the bitterness which tinged his opposition to the Judiciary act of 1801, and in his refusal to countenance a change in the Constitution of Virginia in 1829-30. Few States have needed a new instrument more than did Virginia at that date. Yet Giles, rounding out his career by a three years' term as Governor, stood to the last against the inevitable tide of reform in the Convention. Professor Anderson might more clearly have indicated the deficiencies of a man who was so extraordinary a reactionary in a democratic period. But both in its central narrative and in *obiter dicta* the book contains much of value to the student of State or national history. A careful index makes this easily accessible.

Prof. Robert William Rogers's useful and carefully compiled History of Babylonia and Assyria has appeared in a revised and largely rewritten sixth edition (Abingdon Press, two volumes, $10). In the making of this revision the original two volumes of about 850 pages have been expanded to 1,150 pages. The most important part of the revision is naturally to be found in the earlier period of Babylonian history. All the substantial facts so far as ascertained for the period prior to the dynasty of Sargon I, with whom the Semitic settlers of the Euphrates valley came to the fore, have been embodied by the author, and a good many details have also been added for the period between the dynasty of Sargon and the fall of Larsa, about the year 2100 B. C. It is somewhat of a disappointment not to find more mention of dates for this early period, even though they would necessarily be merely approximate. Professor Rogers no doubt expects the reader to refer to the table inserted towards the close of the first volume, but it would have been convenient in connection with the early rulers to add the approximate date while presenting the narrative of the period. The author in this latest edition clings to his preference for higher figures than those usually accepted at present by most Assyriologists for Sargon and his predecessors, but even according to the author's calculation Sargon ought to be brought down about two centuries later than c. 3000 B. C., where Professor Rogers puts him. In general, however, it may be said that Professor Rogers is a safe guide to follow, and the two volumes bear testimony throughout of the conscientious manner with which he has followed, down to small details, the researches of Assyriologists in all parts of the world.

Another new feature in the present volumes is the addition of illustrations, of which there are a large number. While many of them naturally have frequently been reproduced, there are a number which are new, and at all events it is valuable to have thus put together a considerable amount of illustrative material for the general culture of Babylonia and Assyria, though only a few of the illustrations have any direct bearing on the history. In connection with the Prolegomena, covering in this edition the entire first volume of almost 550 pages, there are also included portraits of the chief explorers and decipherers. To many of Professor Rogers's readers it may seem that perhaps too much space has been given to the Prolegomena. In a history one hardly expects to have the story of the excavations and decipherment told in such detail as to cover almost 400 pages; nor to have a further chapter added on the script and a survey of the grammar of Sumerian and Akkadian. It might be better, in case of a further edition being called for, to publish this material as a separate book, and the space then gained could profitably be devoted to the introduction of more historical details, especially in the portion dealing with certain sections of Babylonian history and to a critical discussion of the data given in the inscriptions, which are almost entirely lacking.

The last four volumes of the Art and Craft of Letters series (Doran; 40 cents each) are, like the first, essays of a pleasantly and cleverly dilettante sort rather than solid pieces of exposition. The epigram replaces the fact; in place of consecutive thought we have "suggestiveness." Orlo Williams's little book on "The Essay" is typical in giving one-fourth of its space to an attempt at a definition, and finally arriving at the illuminating conclusion that "an essay is a typical composition by a typical essayist." Mr. Williams does, however, neatly characterize the standard essayists and provide a guide to the best things of George Street, G. K. Chesterton, Max Beerbohm, E. V. Lucas, Hilaire Belloc, and Vernon Lee. Frank Sidgwick's "The Ballad" contains, amid much ill-assorted matter, a readable account of the recent work of scholarship in that field. "Parody," by Christopher Stone, is a frankly entertaining tissue of quotations, and P. P. Howe's "Criticism" is a sketchy outline of the interpretation of literature down to our time, commendable in its warm appreciation of Johnson and Hazlitt.

A good book on military history for boys of high-school age is "The Book of the Thin Red Line," by Sir Henry Newbolt (Longmans; $1.50 net). The author has picked out six real heroes and pieced together, from their own words so far as possible, a graphic and interesting sketch of their military careers. They cover nearly all the great wars of the nineteenth century in which men of British blood were engaged. Four of the six are famous—John Colborne, Sir Harry Smith, James Outram, and Stonewall Jackson. Two of them were brothers—Robert and George Blakeney—who entered the service in their 'teens, and ended their careers without attaining high rank; but they kept good diaries, still in manuscript, from which the author draws picturesque anecdotes and details; and they show the spirit with which Englishmen waged war against Napoleon. The stirring episodes are such as to arouse patriotism and noble resolve in a boy, but their glamour does not altogether throw into obscurity the darker side of war. A number of illustrations and colored plates show some famous charges made by "the thin red line."

Science

Rules may be formulated, printed, and distributed, but unless they are understood and their purpose appreciated they remain so much paper and printer's ink. This apparently is the point of view of the committee responsible for a little volume entitled "Washington Health Rules," prepared and published by the Association for the Prevention of Tuberculosis, Washington, D. C. Twelve excellent rules embrace the topics of good air, pure water, safe milk and cream, sleep, personal cleanliness, food, breathing and exercise, care of the teeth, liquor and tobacco, colds, and sunshine. The rules, as presented in two pages, are so brief and terse as to be almost commands. The why and wherefore—which give force to the rule—are necessarily lacking in such brief statements. The individual for whom the rule is supposed to be of benefit is left to his own inclination—to obey the rule or otherwise as he sees fit. It occurred, apparently, to the active Association of the District of Columbia that as no one could be forced to obedience it was advisable to appeal to reason. The Association therefore selected a recognized authority to interpret each rule and to explain its importance. Thus we find the Surgeon-General of the United States Public Health Service discussing the rule concerning "pure water," the Health Officer of the District of Columbia the question of "food," and Dr. Harvey W. Wiley the rule concerning "liquor and tobacco." For example, Rule 1, on "Good Air," states baldly: "Avoid badly ventilated, badly lighted, dusty, dirty, overheated, crowded, or damp rooms." The interpreter of this rule tells in seven pages why fresh air is essential to life, what "air" is, how it becomes polluted or unwholesome, how polluted air affects the individual exposed to it, what means may be employed to keep the air in rooms fresh, and finally the curative effect of an abundance of fresh air in certain diseases is emphasized.

That this method of interpreting health rules is of great value and at the same time is greatly appreciated is shown by the fact that since 1911 the Association has distributed 34,000 copies in the public schools of Washington, while the United States Bureau of Indian Affairs has distributed 50,000 copies in Indian homes. The Association primarily

intended its commentary for school teachers and normal-school pupils, but it is worthy of a much wider distribution, as is also this example worthy of emulation by any organization that formulates rules for the education of the general community.

A characteristic product of the French school of historical geography may be seen in a thesis of 372 pages on "La Géographie de Terre Neuve," by Robert Perret (Paris: Guilmoto). The author visited Newfoundland in the course of his study, but did not see a great part of the country; his thesis is largely a compilation of the work of others. It opens with a 30-page history of exploration; next come 40 pages on geology and physical geography, regarding which suffice it to say that the thesis-volume led to the degree of *Docteur ès Lettres,* not *ès Sciences;* then 30 more pages on the Grand Banks and the theories of their origin. The climate, the flora, and the fauna follow with 35, 22, and 38 pages respectively, but with a less intimate correlation with physical features than could be desired, perhaps because the physical features themselves are not well described; the exploitation of the land and of the sea have 24 and 44 pages; finally colonization is treated in 52 pages, and the relations of Newfoundland to the Great Powers in 30 pages. The historical element is strong throughout, even to the flavoring of the earlier scientific chapters with an extract of the progress of knowledge, instead of holding their content objectively to the present-day knowledge of the facts; while the last four chapters would fit about as well in an historical as in a geographical treatise. The book has thirty excellent photographic plates, and a bibliography of 423 titles; but the table of contents occupies only fifteen half-lines. There are no special page or paragraph headings, and no index.

Drama

"PETER PAN."

We write a word of welcome to Sir James Barrie's "Peter Pan," which has been revived for a short holiday season at the Empire Theatre. We had almost said Miss Maude Adams's "Peter Pan," so inseparably is the actress connected in this country with the part which, in an especial way, she has made her own, and in which she is seen, undoubtedly, to better advantage than in any other rôle that she has attempted. Miss Adams's Peter Pan remains the gracious, winning, insouciant performance it has always been: it has become so much of a tradition on the American stage that it is impossible now to think of a day when Miss Adams may be too old to play the part. At any rate, judging from this year's performance, that day is still very far distant. Other rôles are, on the whole, adequately played, and the production is generaly satisfactory, although we have seen considerably more beautiful stage productions and certainly more sympathetic Wendys. We cannot close a brief notice without recording an illuminating flash of criticism that came from an infant of five who happened to occupy the next seat to the writer. "Why," he queried plaintively, after Miss Adams's appeal to the audience to perjure itself on the question of fairies had met with the usual response, "Why do we have to clap? Why don't the boys [Peter's companions] clap?" The infantile critic rightly resented the tearing away of that invisible barrier between actors and audience on the erection of which illusion depends. Out of the mouths of babes and sucklings Sir James Barrie is convicted of a bit of meretricious theatricality.

S. W.

"THE WEAVERS."

The performance of "The Weavers" at the Garden Theatre, by Emanuel Reicher's company, does full justice to a play in which a community is protagonist, and no two or three characters stand forth with the others grouped around them in subsidiary rôles. The five-act panorama of suffering and revolt requires a cast numerous and balanced, in which each shall fit with natural individuality into his place and yet coöperate with the others in achieving a striking general effect. There was not a single actor who was incompetent, and the majority gave notably able interpretations of their parts, while the whole performance had a crushing unity of emotional weight. The manufacturer, Dreissiger, as he appeared in the first act, overseeing two insolent officers as they doled out a pitiful tale of groschen to the underfed workers, was impersonated by Mortimer Martini in an excellent picture of greed, hypocrisy, and bullying cowardice. Of these two officers, the manager, Pfeifer, was as vividly heartless and sneaking.

From the first scenes the intelligent staging of the play held the audience closely: the stage pictures had spirit and color, the characters of the background moved with animation and reality, and where, as in the mob gatherings and at the tavern, the whole cast had to speak and act at once, the scenes had a remarkable genuineness. The settings had been worked out with a nice eye to detail and to coöperative values. Even the half-starved children took their places as by instinct. The play proceeded with cumulative power, but there was a constant occurrence of little vignettes of extraordinary pathos and completeness. One was furnished by Herr Reicher himself, as Old Ansorge in tears at the memory of his father's death; another by the scene in the eating-room of the tavern, in which the travelling salesman made love to the innkeeper's daughter; a third by the shallow pastor lecturing his frocked assistant in Dreissiger's drawing-room upon the youthful folly of his sympathy for the weavers. The finest bit of acting was that of Adolph Link, a man of some European reputation, who impersonated the simple, confused old Baumert, gentle at heart, yet half-maddened by his sense of injustice. Mention should also be made of Rupert Harvey as the returned soldier, whose bearing and brandy puts heart into the rebellious weavers, and who is their active ringleader; and of Augustus Duncan as Old Hilse, whose loyalty to peace and order is not to be shaken, and who is shot as he stands in trembling dignity at his loom. The almost incredible injustices pictured by the play appear credible and real, mainly by virtue of the fact that against the ghastliest of the backgrounds the characters stand forth as simple and natural peasant souls; even the scene in the poverty-stricken cabin, where supper is preparing in the shape of a roasted dog, does not appear overstrained. Opinions may differ as to the permanent value of such a play as "The Weavers"; there is no doubt as to the strength of this first American performance in English.

A. N.

"KATINKA."

Mr. Arthur Hammerstein's holiday offering to the theatre-going public is not without distinct merits so far as the music goes, but the book is trivial and the singing mediocre. The production is, however, pleasingly staged, and the audience which attended the Forty-fourth Street Theatre on Christmas eve expressed cordial approval of the piece. There is no need here to outline the story, which is inconsequential. To Miss May Naudain is assigned the title part, and she is heard to the best advantage in "Rackety Coo." A more happy selection is Edith Rowland, who scores heavily in "I Want to Marry a Male Quartette" and "I Can Tell by the Way You Dance, Dear." Others in the cast are Franklyn Ardell, who provides most of the comedy; Samuel Ash, Count Grimaldi, and Daniel Baker. Rudolf Friml wrote the music, while the book and lyrics are the work of Otto Hauerback. The creditable staging is by Frank Smithson.

H. L.

"RUGGLES OF RED GAP."

Harry Leon Wilson's story of this name is not a work of genius; it is a good, workmanlike specimen of the popular and quite obvious humor of the day which one associates particularly with the widely circulated magazine which introduced Mr. Wilson's story to the public. Compared, however, with the play which Harrison Rhodes has laboriously patched together from Mr. Wilson's chapters, the story is, from beginning to end, a piece of rollicking mirth. In justice to the original author it must be said that there was enough material in his story to make a slight but sufficiently amusing farce. Ruggles, an impeccable English valet, is turned over, in consideration of a gambling debt incurred by his master, the Honourable George Vane-Basingwell, to the service of a crude Western American family hailing from the town of Red Gap. "Cousin Egbert," at the instance of the masterful Mrs. Floud, is to be the particular object of Ruggles's solicitous care; but "Cousin Egbert" is one who "can be pushed just so far and no further," and, arrived in Red Gap, he takes the wind out of Mrs. Floud's sails by introducing the valet to the élite of the town as "Colonel Ruggles, of London, England." The mischief is irreparable, and to save the family from ridicule, Ruggles must continue to support his spurious honors. In the end, the English valet, who proves himself to be very much of a man, becoming appreciative of the advantages of American democracy, starts a restaurant and settles down as one of Red Gap's leading citizens.

In the original tale there is a good deal of mild humor and some effective satire on the snobbery of small Western towns. The play has been extracted piecemeal from the book; the humor is almost entirely of that side-splitting variety which consists of the American characters guffawing at certain unfamiliar expressions used by the English characters, and vice versa; the satire has become ponderous. With judicious pruning and rewriting, the play might even now amount to something, if the principal character were well played. Ralph Herz is the star (we gather of some magnitude from the fact that

His name in the programme is printed in capital letters) and plays Ruggles. So long as he is the deferential valet pure and simple, he is competent. So soon as he ceases to be subservient, he loses all conception of the part, becomes characterless and futile, and fails completely to give any impression of the gradual evolution of the English valet into the American citizen—which is the only motive that gives unity to the play. The rest of the cast—if we except the impossible Earl of Brinstead—does well with none too promising material. In particular we may mention the Mrs. Floud of Louise Closser Hale, whose intermittent appearances on the stage are always welcome, and the Honourable George of George Hassell, who succeeds in playing a typical stage Englishman without beclouding the character by exaggeration. S. W.

A half-season of the Neighborhood Playhouse's activity has been ended with the presentation of Nutta Syrett's "The Gift of the Fairies," a play for very young children, by performers of tender age specially trained. The previous offering was a pantomime by the name of "Thanksgiving Festival," with dancing and singing that required the services of fifty persons. The Playhouse has also seen the presentation of Violet Tearn's "Wild Birds," a comedy of the Devonshire moors originally given in England by the Bristol Repertory Theatre; and it has been thrown open to performances of the operetta "Adelaide," by David Bispham, and of Sudermann's "Johannisfeuer" in Yiddish, by the Free Yiddish Folks' Theatre. The Playhouse, under the competent direction of Miss Agnes Morgan and others, offers dramatic training to a large number of young people of this section of the lower East Side, recruited principally from the clubs of the Neighborhood Settlement. Among the performances planned for the near future is one of Browning's, "A Blot in the 'Scutcheon."

Music

RUSSIAN MUSIC TO THE FORE.

The Russian composers who have come into prominence since the days of Rubinstein and Tchaikovsky have been remarkably lucky. A timber merchant of great wealth named Mitrophane Petrovich Balaiev made up his mind to become their Mæcenas. In 1885 he founded a publishing house in Leipzig and began to spend vast sums in printing and distributing the works of the younger composers of his country. He also encouraged orchestras with his financial aid to play these compositions; and in 1889 he financed the concerts of Russian music given in Paris during the Exposition. Half a dozen years ago the missionary work was resumed by Serge Diaghileff, who took to the principal capitals of Europe the Ballet Russe as well as two operas of which the Russians are particularly proud: Moussorgky's "Boris Godounoff" and Borodin's "Prince Igor." The first of these operas was also produced two seasons ago at the Metropolitan Opera House, where it has since held its own, while "Prince Igor" is to have its first American performance there this evening. On January 17 the Diaghileff Ballet Russe, now en route, will be heard at the Century Theatre in New York, and later at the Metropolitan Opera House, which has shortened its season to make room for the Russians, who will produce twenty or more spectacular and pantomimic ballets, for most of which Tchaikovsky, Borodin, Balakireff, Rimsky-Korsakoff, and Stravinsky, all of them Muscovites, wrote the music.

Nothing could be more timely, under these circumstances, than the publication of a book on Russian music. When it bears the name of Arthur Pougin, as does the "Short History of Russian Music" just issued in a good translation of Lawrence Howard by Brentano's, it is doubly welcome. M. Pougin is a scholarly critic (he wrote the Supplement to the monumental "Biographie universelle des Musiciens" of Fétis), and he has plenty of the Gallic sense of humor and sarcasm which are necessary for treating the most important phase of Russian musical history—the great war between the cosmopolitan musical geniuses, Rubinstein and Tchaikovsky in one camp, and the formerly so-called "Young Russian School" in the other—a school of which the leaders were Balakireff, César Cui, Moussorgsky, Borodin, and Rimsky-Korsakoff. These men looked upon themselves (at least some of them did) as the "Big Five." With touching modesty they called themselves Mogouchaya Koushka, "The Powerful Group." They formed a mutual admiration society and looked with contempt on the works of those not included in their circle.

Their chief spokesman was the least talented (musically) of the five: César Cui, who, in an historic sketch, and in many contributions to periodicals, sought to prove that Rubinstein and Tchaikovsky were not real Russian composers. Their chief sin, it appears, was that they invented and used melodies of their own instead of using Russian folk tunes as bricks in building up their compositions. M. Pougin does not fail to bring out the humor of this situation, as well as that of the attitude of this coterie towards Wagner, whose principles they borrowed while crying loudly that they were utterly different and abhorred him. César Cui found "a complete absence of music" in "Die Walküre," while "Tristan" gave him the same impression as "a door grating on its hinges for three and a half hours." He lived to see at least two of his partners desert him and his principles; and these two were by far the most gifted of the five—Rimsky-Korsakoff and Borodin.

Stravinsky and the other men of the youngest iconoclastic group of Russians are only briefly referred to in Pougin's book, which does not pretend to be a complete history, but only, as its French title indicates, an "Essai Historique sur la Musique en Russie." His chapters on Rubinstein and Tchaikovsky are remarkably judicial. It is in these two men and in Rimsky-Korsakoff that the chief glory of Russian music lies. Pougin realizes this fact, as does Rosa Newmarch in her admirable "History of Russian Opera," whereas Montagu-Nathan spoiled his otherwise meritorious "History of Russian Music" by almost outdoing Cui in abuse of the two men of genius and in flattery of the mediocrities. It should be stated that, while M. Pougin makes mincemeat of Cui and his childish pretensions, he does not undervalue the products of the "Big Five," or the other Russians, beginning with Glinka, who, as the founder of Russian opera, based, partly, on folk song, gets the usual amount of attention, though his famous opera, "A Life for the Czar," "is not perhaps an actual masterpiece."

Of special interest are the opening chapters of this history, in which the author dwells in considerable detail on the roots of Russian music in folk song and the church. He refers to the Ukraine, a province famous for its beautiful voices, and to the amazing singers who double the ordinary basses at the interval of an octave below them. He cites two eminent French composers as to the effect the choir of the Imperial Chapel had on them. Adam wrote: "From the very first bars of the piece I began to shed tears; then, when the music quickened up, and the thundering voices launched the whole artillery of their lungs, I found myself trembling and covered with a cold sweat. The most tremendous orchestra in the world could never give rise to this curious sensation, which was entirely different from any that I had supposed it possible for music to convey." "Sighs and murmurs such as one sometimes hears in dreams" were suggested to Berlioz when he heard this Russian choir. "From time to time came sounds so intense that they resembled human cries which tortured the mind with the weight of sudden oppression and almost made the heart stop beating. Then the whole thing quieted down, diminishing by divinely slow gradations to a mere breath, as though a choir of angels were leaving the earth and gradually losing itself in the uppermost heights of heaven."

Two volumes, entitled "Modern Russian Piano Music," from the Oliver Ditson press, appear just in time to emphasize the fact that Russian music is not all operatic and terpsichorean. The editor of these volumes is Constantin von Sternberg, a Russian by birth and formerly a concert pianist of distinction. His first volume includes pieces by Arensky, Balakireff, Cui, Glazounoff, Glinka, and sixteen less-known composers; while the second has pieces by sixteen more writers, of whom the most famous are Liadoff, Moussorgsky, Rachmaninoff, Scriabine, and Tchaikovsky. Together these three dozen and one composers make a good showing for their country. Some of the pieces selected by Mr. Sternberg are difficult, but most of them come within the compass of amateurs. In an introductory essay he discusses the qualities which have "given to Russian music the strength to make its way from its far northern home through the whole civilized world."

Henry T. Finck.

WITHIN THE ENCLOSURE AT POMPEII —SOME RECENT EXCAVATIONS.

By JOHN A. HUYBERS.

NAPLES, December 6.

With the permission of Prof. Victor Spinazzola, the director of the National Museum of Naples, and director of the excavations at Pompeii for the last five years, I have visited the enclosure at Pompeii, closed to the public. Under the direction of Professor Spinazzola, who proceeds carefully from layer to layer, every object found being restored to its original place, remarkable results have been achieved. In the last four years no less than 300 metres of ancient streets have been laid bare. With such care have the excavations been carried out that they have assumed an importance superior to any previously made. As the official publication of the recent excavations has not yet appeared, I was not permitted to make notes or drawings of any kind. What follows, therefore, is no more than a series of impressions, memorized in the course of a brief visit.

On entering by the small door—which the guardian locks behind us—in the high fence separating that part of the Strada dell' Abbondanza, now in process of excavation, and rigorously closed to the public, an astonishing difference is at once noticed between that Pompeii familiar to visitors and what is now before the eyes. On this side of the partition only humanity is lacking to give to the scene the activity and vitality of daily life. Within the enclosure of the new excavations is a continuation of the Strada dell' Abbondanza which we have just left outside; to the left is a private house, with what might be, but for the color, the original door—it is a cement model of the carbonized door that was standing there, and the real bolts and locks are in their proper places. On the stucco walls outside are the bright red letters of the notices of candidates for municipal employment. Another door shows the raised large panels, about three feet square, the intervening space between the panels studded with the heads of great round copper nails like large green toadstools seen from above. Nails, bars, locks are all in their original places.

The next house is that of a shoe- or rather sandal-maker; on the wall or wide pilaster separating it from the adjoining house are two frescoes in excellent condition—the precaution has been taken to place a glass case over each fresco, with a canvas curtain, only withdrawn for the privileged visitor; for after their long inurement the frescoes would fade rapidly in the sun's rays. The superior panel shows Mercury leaving a temple, carrying in his left hand the caduces, in his right a purse. In order that the figure may not be too small, the head of Mercury almost reaches the top of the temple. The fresco beneath shows the sandal-maker's shop. He is standing behind the counter; to the left a case with shelves showing various patterns. A customer in blue mantle is sitting on a bench to the right, waiting to be served. The next house is a dyer's, with two well-preserved frescoes on the outer wall. The upper panel shows Venus in blue drapery in a chariot to which are harnessed four elephants advancing towards the spectator. Beneath are figures dyeing cloth. To the right a figure in pink mantle holds up, and is almost concealed by, a large yellow cloth with two pink stripes that he is exhibiting as a sample of the work of the establishment. Within may be seen the dyeing vats.

A few doors beyond is a trattoria. Here all is complete—the copper utensils for heating and cooking, the various vessels for kitchen use, the wine jars of different sizes.

In many places the upper stories of the dwellings are still standing; balconies overlook the street; porticos are roofed with great, broad tiles, the bright-red Latin letters showing out on the stucco walls. In the kitchen of the wine-shop the water in the closed copper heater remained as in the day the city was overwhelmed. On the wall outside in bright colors is a Priapus, with inordinate phallus—the old sign of abundance, as on Egyptian monuments. On the pavement we trip over a metal conduit that has escaped destruction, and the metal pipe still issues from the rudely carved head in low relief of the public fountain. The latrina, with passage for running water, shows the same arrangement as that adopted in the steerage quarters of Italian steamships today. The natural attitude is preserved, and no better method could be found.

There is, in particular, one remarkable house that seems to be awaiting its usual occupants, to break the silence of 2,000 years. The entrance, the portico, the tesselated pavement of the passage rising gently to the higher elevation of the atrium, are uninjured. From the atrium in the chamber to the left, we can see the fresco covering the main part of the wall facing us. It measures, I should judge, eighteen feet in length and twelve feet in height. Too recently discovered to be as yet protected by a glass case, the fresco in the freshness of its coloring might have been painted six months ago. A lion is pursuing a bull in the foreground, and in the upper part of the picture are hunting dogs worrying a boar. In the upper story is the roof garden, with the triclinium and table in the middle still standing.

In another house, in the bedroom, the white ivory feet of the bed remain almost unimpaired, and above is the impression of the bolster and the mattress. In a hallway the decorated white tiles, in heavy relief and of various design, have not dropped from their places. In another room the frieze of white figures in relief on a blue ground remains intact.

In the basement of a three-story house are the moulds of five recently discovered human beings, placed on temporary wooden tables. The first is in peaceful attitude, lying on the side, with hands placed under the head. Next is a group of two, evidently husband and wife. They lie on their sides facing each other. The skull of the woman is intact. The attitude is that of a frightened child pressing its head against its mother's breast. The next figure is lying on its back, with the legs drawn up, the uneasy attitude of the whole body and the position of the arms suggesting a death by suffocation. The fifth figure, like the first, is in a peaceful attitude, as though death came quietly in sleep.

The men who work in the enclosure are necessarily picked men, integrity and honesty being essentials in the work to be done. I carried away with me the impression of a partly excavated house. At my feet on the mosaic pavement the light pumice cinders roll from the higher elevation, on which stalwart young workmen are removing the débris in baskets, bronze in complexion, vigorous in form, with kindly curious eyes—"vi ridon prima gli occhi, che la bocca"—on the stranger who has interrupted them in their work.

Mr. Ralph Adams Cram, in his "Heart of Europe" (Scribner; $2.50), finds abundant opportunity for his warm and sometimes fervid style, and in the main makes good use of the opportunity. The barbarism of the horrible war that has devastated the whole region lying between the Rhine and the Seine for a hundred miles back from the Channel; the desolation of fair cities and busy lands, and the wreckage of priceless monuments of art tempt to strong language, which Dr. Cram knows how to use, and uses effectively and often eloquently. The book aims to sketch in broad outlines the aspect and history of north-eastern France and of Belgium, with special reference to the art of the cities of that afflicted region, and with a not unnatural emphasis on the architecture. Dr. Cram is a competent critic, and his descriptions are as far as possible from the guidebook type; they are broad characterizations, with little technical detail. The Glory of a Great Art, The Burghers and Their Buildings, A Tale of Three Cities, The Fifteenth Century Painters, Gothic Sculpture, The Allied Arts—these titles of a few of the sixteen chapters indicate the method and spirit of his treatment, which is rather that of detached essays covering often the same field from different points of view than of a systematic treatise. They are all very readable, excellent in literary form, often suggestive and illuminating. Dr. Cram has strong prejudices, which give color to his style even when they vitiate the soundness of his judgment; he has two especial antipathies, the Renaissance and the Reformation, and he looks askance at republican institutions, and utterly abhors modern industrialism. To his view, the world was much better off in the 500 years before 1500 than it has been in the 400 years since. If the present state of the heart of Europe is, after all, the true measure of the progress of the last four centuries, one may easily incline to his view; but the Teutonic *Kultur* has not yet overspread the world. Apart from the occasionally violent expressions of these prejudices, the historical sketches are handled in an entertaining and informing way. Thirty-three full-page illustrations add to the interest of the book.

"Lantern Making," as imparted by H. A. Rankin (Dutton; $1 net), is the art of fashioning paper lanterns of various geometrical shapes. The book consists of working patterns with accompanying descriptions. The exercises have obvious educational value in their wide range of geometrical practice and theory, manipulative cutting and folding, and the requirement of careful gluing or gumming. The lanterns are quite suitable to make at home, since the materials are cheap and common. Nothing prevents rendering them well enough to serve a decorative purpose.

A. J. Anderson's "The Romance of Leonardo da Vinci" (Brentano's; $3.75 net) is a most exasperating sort of nondescript, as readers of the author's similar works on Fra Filippo Lippi and Botticelli will hardly need to be told. Half a controversial treatise, half a bad historical novel, with the strangest mixture of occasional shrewd sense and more common preposterous fancy, in a crude and inelegant diction—the only word that will express the composite must be sought in Germany. It is *Unding*.

"Great Schools of Painting, a First Book of European Art," by Winifred Turner (Lippincott; $1.50), is as sensible a little book as we have seen. It treats the schools of Italy, Flanders, Germany, and Spain. The method is simple: A little general history, a little artist biography, comment on a few typical paintings. There are thirty-two well-chosen plates. It is just the thing for grammar-school or for home reading for children in their 'teens. A few errors in matters of fact and attribution are venial blemishes. The slurring and inadequate treatment of Titian, Rubens, and the more drastic *genre* painters of the North is a more serious drawback. Offsetting this is the real skill with which the *materialia* of legend and symbolism are taught without too much breaking the continuity of the chapters.

Another compilation for middle-class collectors appears in "Antique Furniture," by Fred W. Burgess (Putnam; $2). This is not a very important work, despite its aim to be "an exhaustive book of reference about the furniture of all ages and of all peoples." Its range indeed, is wide, but the author lacks insight and ability to distinguish essential from non-essential. An American reader, to test the validity of Mr. Burgess's claim for his book, might naturally turn to the chapter on American furniture. This is found to be neither "exhaustive" nor perspicacious, though it contains fifteen pages of closely packed and rather scrappy information. From this treatment, certainly, no English reader would form a correct idea of the dignity of American colonial cabinet-making, especially fine during the Chippendale period, 1770 to 1775, when, as Mr. Luke Vincent Lockwood has written, "furniture was made in the colonies which for workmanship compared favorably with any made in England." The overseas reader will be apprised quite fully of the national habit of religiously preserving the chairs in which our notables have sat. So unique a development, however, as that of the Rhode Island block fronts is not mentioned. The American empire style is not referred to. The writer has drawn nothing from our great museum collections, such as the Bolles furniture at the Metropolitan Museum of Art and the Pendleton collection at the Rhode Island School of Design. The high lights, in brief, of American furniture have not been brought out as one might expect in a compilation of this pretension. Similar superficiality may be charged against other chapters. A characteristically inaccurate sentence is this: "Although not introduced into this country [England] until 1595 mahogany soon became the favorite wood of the cabinet-maker." "Soon," means, of course, in about a century! Positive statements about purely hypothetical matters occur, as when the author, citing no authority, attributes the improvement of European arts and crafts to "the better knowledge of human form possessed by Grecian artists, who added to Chinese art by more realistic and less conventional ornamentation." One does not recall that even the imaginative Professor Fenollosa asserted of the pre-Chow Chinese so widespread influence as this. The book for all these defects is fairly readable, and much of its information has been taken from sources which in the original are too costly for the average person to own.

Finance

NEW PHASES OF AN "INTERNATIONAL TRADE BALANCE."

The advance last week in exchange on London, to $4.73¼ in the pound sterling, fixed the highest rate since the middle of last August. It compared with $4.71⅞ a week before and with $4.50 on September 1, the low level of the period of war. Even when sterling rates rose violently at the end of last September, on the announcement of the $500,000,000 Anglo-French loan, the highest figure touched on the recovery was $4.73. That this movement of exchange in favor of London was chiefly a result of the special credit lately arranged by London bankers in New York, for the special purpose of regulating the sterling market, was plain enough. Probably, too, the continuing resale to us of American securities by English holders, and the prospect of a continued movement of the sort under the auspices of the British Exchequer, had considerable influence.

But the rise in sterling exchange also directed attention to two highly interesting financial statements, made public this past week. The first, which bore familiar testimony to one side of the situation, was the foreign trade report for November, showing the surplus of merchandise exports over imports for that month to have been $166,800,000, as against a previous high November record of $125,100,000, and the excess for the eleven completed months of 1915 to have been $1,583,000,000, as against a previous maximum for those months of $642,000,000.

Here was a "merchandise balance" nearly a thousand million dollars greater than the largest ever witnessed in the past, and much the greater part of the difference was for account of England and France. There have been three main offsets to the necessary influence of this abnormal merchandise movement on the market for international exchange—the gold sent to us by Europe, the loans made by us to Europe, and the American securities sold by Europe on our markets.

Of gold, our $387,000,000 excess of imports for the eleven past months was nearly $200,000,000 greater than any similar excess in a quarter of a century. Of loans to Europe, the $500,000,000 Anglo-French operation diverts that much from the burden of remittance through the sterling market, whereby rates of exchange would naturally be forced down. There remain the resales of our own securities.

The latest of the careful estimates by President Loree, of the Delaware & Hudson, given out last week and based on the official registry of ownership in the books of the companies, indicates that $480,892,000 of American railways' stocks and bonds were returned from abroad in the six months between February 1 and July 31. If the monthly average of resales thus indicated has been maintained since that date (and the strong probability is that it has been), and if allowance is made for the sales made before Mr. Loree's six-months' period, then it would seem that the total of such return of American securities, since the New York Stock Exchange reopened in December, has been not far from $1,000,000,000; with such addition as the resale of our industrial stocks and bonds would necessitate.

As a mathematical question, these three offsetting items of securities resold, of loans to Europe, and of gold imported, would appear more than to meet the increase in the surplus of our exports of merchandise over other years of active foreign trade. But the problem cannot be safely worked out without looking further. How much is to be allowed for the total loss of the "tourist expenditures," against which our market used to remit from $150,000,000 upward, offsetting that much of merchandise export trade? How much for the great decrease in our annual "coupon remittances" to Europe, now that Europe's holdings of our securities are so enormously reduced? How much for the withdrawal of outside capital from London and its remittance to New York, since New York became for the time the central market?

The problem is one always surrounded with complications and obscurities; it is a mathematical equation which never works out surely. The very uncertainty of it lends interest to Mr. Loree's estimate of American railway securities still held abroad at the end of last July. The estimate makes them $2,223,500,000 par value, with a market value of $1,751,400,000. At the monthly rate of resale indicated in the estimate, market value of what remains abroad to-day would be $1,431,000,000. It is this remainder which the British Exchequer is endeavoring to "mobilize" in the Government's hands, for return in due course to the American market.

Winnipeg, Canada, F. R. Morris, 235 Portage Ave.

The Ethics of Confucius

The Sayings of the Master and His Disciples upon the Conduct of

"The Superior Man"

By Miles Menander Dawson

With a Foreword by Wu Ting-Fang.

12°. $1.50 net.

The aim in preparing this book has been to put before Occidental readers in the words of the Chinese sage and his followers, as translated, everything concerning ethics and statecraft contained in the Confucian classics which is likely to interest such readers, omitting nothing of importance.

The passages quoted, arranged by topics, in accordance with a scheme laid down as that of Confucius himself in *The Great Learning*, are connected by a running narrative, showing briefly the relationship of one passage with the other, stating from what book taken and by whom enunciated, and most sparingly accompanied by quotations from other moralists, ancient or modern.

All Booksellers.

BOX 500, SCRANTON, PA.

A Book for Every Reader of THE NATION

THE Houghton Mifflin Company has just published a remarkable book which we believe will be of interest to every reader of The Nation and every other thoughtful person interested in the political, social and economic development of the country for the last fifty years.

The volume is entitled FIFTY YEARS OF AMERICAN IDEALISM, The New York Nation, 1865-1915, selections and comments by Gustav Pollak.

Before preparing this announcement the book was submitted to a man who is a reader of The Nation and a student of American History. We asked him for his candid opinion. Here it is:

"Even were I not interested in The Nation and its unique career I should want to own this book. Because it presents more vividly than any other the history of this country from 1865 to 1915.

"A real picture of a period must be painted at the time. Judicious selections from a non-partisan periodical, of high ideals and literary standards, will best enable young men to see and feel the lives of their fathers, and will best recall to the fathers the happenings of earlier days. What conventional history of this half century could begin to bring its great events before us with such striking reality as do these selections from the Nation?"

These selections are in three divisions, the second of which is "The Nation's Views From Year to Year." It is a rare bit of reading. It is like listening to several wise and brilliant men, of, say, the age of Mr. Choate, and being privileged to hear them talk over the great questions that have arisen since the Civil War. How attractive are such accounts—each tinged with the personality of the narrator. Mr. Pollak has gracefully introduced each "view," so that anyone whose memory is a little hazy is at once able to enjoy them thoroughly.

Then come the "Representative Essays," the very best The Nation has printed. For incisiveness, learning, style, and charm they are unsurpassed in English literature. They form a group of masterpieces which, taken with the rest of the volume, will give the reader more intellectual stimulus and pleasure than almost any other book published within the year. The first of the three divisions of the book is "The Nation and Its Contributors." It is a history of The Nation and its relations with the gentlemen and scholars who have made it.

OUR SPECIAL OFFER

Publishers' Price for "FIFTY YEARS OF IDEALISM" $2.50
Subscription to THE NATION for one year..... 4.00
$6.50

Order from THE NATION and the price for both is.....$4.20

BURCHARD POLLAK LIB.

WE ARE GOING TO DOUBLE THE CIRCULATION OF POET LORE IN 1916

BECAUSE

WHAT THE WORLD IS THINKING, not what it is doing, is really what counts in our long, heartbreaking climb toward the light. It is the visions of the great seers the world over, from India to England, from Russia to Japan,—it is these visions alone that will ever lift us out of the dark whirlpool of barbarism in which we are still swirling.

POET LORE

is the only magazine in the world that is continually flashing these splendid visions before us in a series of

WORLD DRAMAS

Over ninety of the world's greatest contemporary dramas were first published in

POET LORE

Among these are the best works of

MAETERLINCK
GORKI
PSHIBISHEVSKY
ANDREYEV
D'ANNUNZIO
HAUPTMANN
BJORNSON
SUDERMANN

THIS IS BUT ONE OF MANY SIMILAR UNSOLICITED LETTERS WE ARE RECEIVING ALL THE TIME:

"Enclosed is my remittance for another year.

"Permit me at the same time to express my appreciation of POET LORE. *This magazine is the shining light among American literary journals.* Being acquainted with all of them, I have a particular reason for thinking so. By introducing to America the highly developed art of all foreign countries, you are doing more for the cause of art in America than would be the case if you merely encouraged a narrow nationalism."

E. W. NELSON, Cleveland, Ohio.

Several hundred of the world's sublimest poems of the present day have been translated in

POET LORE

These include the poems of

LILIENCRON
NEKRASSOV
PAUL HEYSE
VILDRAC
MARINETTI
HOFMANNSTHAL
PAUL VERLAINE
BEAUDUIN

POET LORE

is in the deepest sense the finest and only authentic newspaper in the world, for it publishes the LATEST NEWS OF THE HUMAN SOUL.

POET LORE IS PUBLISHED BI-MONTHLY AT

$1.00 a copy ***$5.00 a year***

TO READERS OF THE NATION

For $1.00 we will send you three recent issues of POET LORE.
